Speedy Reading: Fast Strategies for Teaching GCSE English Literature Post-Lockdown

Emma Stott, 2020-11-10 We're often told that there are no quick fixes in teaching. This isn't entirely true... And post-lockdown, we need speedy fixes more than ever to get our students of English back on track. This book will show you how set texts can be reduced in a way that makes them richer. It will reveal how seemingly obscure literary theory can help learners of all abilities achieve rapidly. And it will help us prepare and revise for dreaded unseen texts, using the precious days we have with students in the most efficient way. Emma Stott uses her experience as a teacher of early entry students and as a Research Lead to gather eight strategies that enable students to be better readers and critics of literature in general; not just of the same (outwardly!) threadbare set texts. Speedy Reading promises to make you excited about those worn texts, the pleasures of unseen reading and even about the challenges to come.

Louder Than Words Benjamin K. Bergen,2012-10-30 Whether it's brusque, convincing, fraught with emotion, or dripping with innuendo, language is fundamentally a tool for conveying meaning—a uniquely human magic trick in which you vibrate your vocal cords to make your innermost thoughts pop up in someone else's mind. You can use it to talk about all sorts of things—from your new labradoodle puppy to the expansive gardens at Versailles, from Roger Federer's backhand to things that don't exist at all, like flying pigs. And when you talk, your listener fills in lots of details you didn't mention—the curliness of the dog's fur or the vast statuary on the grounds of the French palace. What's the trick behind this magic? How does meaning work? In *Louder than Words*, cognitive scientist Benjamin Bergen draws together a decade's worth of research in psychology, linguistics, and neuroscience to offer a new theory of how our minds make meaning. When we hear words and sentences, Bergen contends, we engage the parts of our brain that we use for perception and action, repurposing these evolutionarily older networks to create simulations in our minds. These embodied simulations, as they're called, are what makes it possible for us to become better baseball players by merely visualizing a well-executed swing; what allows us to remember which cupboard the diapers are in without looking, and what makes it so hard to talk on a cell phone while we're driving on the highway. Meaning is more than just knowing definitions of words, as others have previously argued. In understanding language, our brains engage in a creative process of constructing rich mental worlds in which we see, hear, feel, and act. Through whimsical examples and ingenious experiments, Bergen leads us on a virtual tour of the new science of embodied cognition. A brilliant account of our human capacity to understand language, *Louder than Words* will profoundly change how you read, speak, and listen.

Sooner, Faster, Better Reading for All Diane Montgomery,2023-10-05 Sutton Trust research showed that disadvantaged children were 11.5 months behind advantaged peers in reading by the end of their first year of primary education, and never caught up. By the time these students were completing their GCSE examinations, they were 20 months behind. This book provides a 7-point plan to change this, so that all children, including those with dyslexia, can become readers by the end of

divided into nine parts: Cognitive Science, Neuroscience, Theory, Algorithms and Architectures, Implementations, Speech and Signal Processing, Vision, Applications, and Control. Chapters describe how neuroscientists and cognitive scientists use computational models of neural systems to test hypotheses and generate predictions to guide their work. This work includes models of how networks in the owl brainstem could be trained for complex localization function, how cellular activity may underlie rat navigation, how cholinergic modulation may regulate cortical reorganization, and how damage to parietal cortex may result in neglect. Additional work concerns development of theoretical techniques important for understanding the dynamics of neural systems, including formation of cortical maps, analysis of recurrent networks, and analysis of self-supervised learning. Chapters also describe how engineers and computer scientists have approached problems of pattern recognition or speech recognition using computational architectures inspired by the interaction of populations of neurons within the brain. Examples are new neural network models that have been applied to classical problems, including handwritten character recognition and object recognition, and exciting new work that focuses on building electronic hardware modeled after neural systems. Spoken Language Pragmatics Regina Weinert,2007-07-26 This volume provides a detailed analysis of the relationships between form and function in spontaneous spoken language. The contributors analyse English, German and Spanish data to present a multilingual perspective on the complexities facing speakers in a variety of contexts. Through an examination of the language of everyday conversation, interviews, consultations, task-based dialogues, football commentaries, radio-play productions and intercultural conversations, the book demonstrates the effect of informational, discourse-external and personal factors on form and shows how speakers position themselves in relation to their discourse, orchestrate different tasks, move between different 'voices', and negotiate meaning. The result is a comprehensive analysis of the multiple layers of spontaneous spoken language. *Spoken Language Pragmatics* presents research that will be of interest to academics working in linguistics, applied linguistics, discourse analysis and pragmatics.
