John C. Rigdon

WordNet Christiane Fellbaum, 1998 WordNet, an electronic lexical database, is considered to be the most important resource available to researchers in computational linguistics, text analysis, and many related areas. English nouns, verbs, adjectives, and adverbs are organized into synonym sets, each representing one underlying lexicalized concept. Different relations link the synonym sets. The purpose of this volume is twofold. First, it discusses the design of WordNet and the theoretical motivations behind it. Second, it provides a survey of representative applications, including word sense identification, information retrieval, selectional preferences of verbs, and lexical chains.

It provides a critical update on how Russian society, politics, economy, and culture are reconfigured in the context of ubiquitous connectivity and accounts for the political and societal responses to digitalization. In addition, it answers practical and methodological questions in handling Russian data and a wide array of digital methods. The volume makes a timely intervention in our understanding of the changing field of Russian Studies and is an essential guide for scholars, advanced undergraduate and graduate students studying Russia today.

A Dictionary of Computer and Internet Terms In French and English John C. Rigdon, 2019-09-12 This dictionary contains

approximately 34,000 computer and Internet terms in English and French. You will find that many of the terms are the same in both languages (cognates) as many of the more recent terms have been assimilated into French from English. This dictionary is derived from our Words R Us system, a derivative of WordNet. English Wordnet, originally created by Princeton University is a lexical database for the English language. It groups words in English into sets of synonyms called synsets, provides brief definitions and usage examples, and records a series of relationships between these sets of synonyms. WordNet can be viewed as both a combination of dictionary and thesaurus. This dictionary will be indispensable for any international company doing business in France the Francophone countries around the world. We also publish a companion volume with definitions of the terms in French. Check our website for availability.

A Cajun Dictionary John C Rigdon, 2021-02-16 We've all been introduced to Cajun speech and strain to understand it, catching just a word here and there. Louisiana French or Creole is spoken by several hundred thousand people in southern Louisiana, but until recently the language has not gotten its due as a serious language, distinct from both French and English. Over the centuries, the language has incorporated some words of African, Spanish, Native American, Haitian and English origin, sometimes giving it linguistic features found only in Louisiana. Louisiana French is spoken across ethnic and racial lines by people who identify as Cajun or Louisiana Creole as well as Chitimacha, Houma, Biloxi, Tunica, Choctaw, Acadian, and French among others. For these reasons, as well as the relatively small influence Acadian French has had on the region, the label Louisiana French or Louisiana Regional French (French: français régional louisianais) is generally regarded as more accurate and inclusive than

Cajun French and is preferred term by linguists and anthropologists. However, Cajun French is commonly used by speakers of the language and other inhabitants of Louisiana. Louisiana French should further not be confused with Louisiana Creole, a distinct French-based creole language indigenous to Louisiana and spoken across racial lines. In Louisiana, language labels are often conflated with ethnic labels. For example, a speaker who identifies as Cajun may call their language Cajun French, though linguists would identify it as Louisiana Creole. Likewise, many Louisiana Creole people of all ethnicities (including Cajuns, who are themselves technically Creoles of Acadian descent, although most do not identify as such) do not speak Louisiana Creole, instead speaking Louisiana French. As in many other languages and people groups, we see this as a distinction without a difference. People who speak Louisiana French and those who speak Louisiana Creole have worked side-by-side, lived among one another, and have enjoyed local festivities together throughout the history of the state. As a result, in regions where both Louisiana French and Louisiana Creole are or used to be spoken, the inhabitants of the region often code-switch, beginning the sentence in one language and completing it in another. This dictionary primarily focuses on terms identified as Louisiana French. It contains over 7,000 terms with their English translation. We also publish a version paired with French. See our website for availability. This dictionary is extracted from our Words R Us system, a derivative of WordNet. English Wordnet, originally created by Princeton University is a lexical database for the English language. It groups words in English into sets of synonyms called synsets, provides brief definitions and usage examples, and records a series of relationships between these sets of synonyms. WordNet can be viewed as both a combination of dictionary and thesaurus.

EuroWordNet: A multilingual database with lexical semantic networks Piek Vossen, 2013-11-11 This book describes the main objective of EuroWordNet, which is the building of a multilingual database with lexical semantic networks or wordnets for several European languages. Each wordnet in the database represents a language-specific structure due to the unique lexicalization of concepts in languages. The concepts are inter-linked via a separate Inter-Lingual-Index, where equivalent concepts across languages should share the same index item. The flexible multilingual design of the database makes it possible to compare the lexicalizations and semantic structures, revealing answers to fundamental linguistic and philosophical questions which could never be answered before. How consistent are lexical semantic networks across languages, what are the language-specific differences of these networks, is there a language-universal ontology, how much information can be shared across languages? First attempts to answer these questions are given in the form of a set of shared or common Base Concepts that has been derived from the separate wordnets and their classification by a language-neutral top-ontology. These Base Concepts play a fundamental role in several wordnets. Nevertheless, the database may also serve many practical needs with respect to (cross-language) information retrieval, machine translation tools, language generation tools and language learning tools, which are discussed in the final chapter. The book offers an excellent introduction to the EuroWordNet project for scholars in the field and raises many issues that set the directions for further research in semantics and knowledge engineering.

Barron's Dictionary & Thesaurus Robert Allen, 2007-04-01 Here's an especially handy two-in-one reference volume for middle school and high school students. The top half of every page serves as a standard dictionary, while the bottom half is a thesaurus that presents selected words from the dictionary section and gives a list of synonyms for each. This dictionary-thesaurus combination offers definitions of more than 40,000 words and phrases, augmented with over 100,000 synonyms. Headwords in both sections are printed in color. Each dictionary headword is designated by its part-of-speech and comes with one or more definitions. Every thesaurus headword—in addition to its list of synonyms—comes with an example sentence that uses the word in context. Corresponding dictionary and thesaurus entries are always cited on the same page for fast, easy reference.
