Environmental Toxicology and Chemistry, 2004

Environmental Toxicology and Chemistry Donald G. Crosby, Donald F. Crosby, 1998 Although they are two aspects of the same subject, environmental toxicology and environmental chemistry are usually presented as though they are entirely separate from one another; even their practitioners often seem unaware of the connections. Environmental Toxicology and Chemistry is the first text to tie these subjects closely together, demonstrating the immediate relevance of each subject to the other while also providing basic, easily understandable introductions to both areas. This unique work presents their principles and applications through numerous illustrative examples and special topics that highlight current environmental concerns. It provides up-to-date as well as historical examples of both subjects and includes discussions of ecotoxicology, epidemiology, predictive methods, and other topics not covered in similar texts. It also includes invertebrates and nonmammal vertebrates, plants, and microorganisms, as well as humans and other mammals. The first five chapters place chemicals in the environment; the following five provide the biological and toxicological settings; and the remaining six chapters offer examples of specific chemicals, their toxic effects and significance, and predictions of fate and toxicity. Each chapter concludes with a discussion of a related topic of particular public and scientific interest, such as chemical carcinogens, pesticide residues, or hazardous wastes. Ideal for advanced undergraduate and graduate students in environmental toxicology courses, Environmental Toxicology and Chemistry offers a timely, comprehensive introduction to the principles of toxicology as they apply to our environment. It is also useful for professionals and practitioners in a wide range of environmentally related fields and businesses.

Fundamentals of Environmental and Toxicological Chemistry Stanley E. Manahan, 2013-02-25 Fundamentals of Environmental and Toxicological Chemistry: Sustainable Science, Fourth Edition covers university-level environmental chemistry, with toxicological chemistry integrated throughout the book. This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry. It is organized based on the five spheres of Earth's environment: (1) the hydrosphere (water), (2) the atmosphere (air), (3) the geosphere (solid Earth), (4) the biosphere (life), and (5) the anthrosphere (the part of the environment made and used by humans). The first chapter defines environmental chemistry and each of the five environmental spheres. The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry. Subsequent chapters are grouped by sphere, beginning with the hydrosphere and its environmental chemistry, water pollution, sustainability, and water as nature's most renewable resource. Chapters then describe the atmosphere, its structure and importance for protecting life on Earth, air pollutants, and the sustainability of atmospheric quality. The author explains the nature of the geosphere and discusses soil for growing food as well as geosphere sustainability. He also describes the biosphere and its sustainability. The final sphere described is the anthrosphere. The text explains human influence on the environment, including climate, pollution in and by the anthrosphere, and means of sustaining this sphere. It also discusses renewable, nonpolluting energy and introduces workplace monitoring. For readers needing additional basic chemistry background, the book includes two chapters on general chemistry and organic chemistry. This updated edition includes three new chapters, new examples and figures, and many new homework problems.

Introduction to Environmental Toxicology Wayne Landis, Ruth Sofield, Ming-Ho Yu, Wayne G. Landis, 2003-12-29 The rapidly evolving field of environmental toxicology involves the study of toxic compounds and their effect on living organisms, as well as their fate within the natural environment. Since publication of the first edition, Introduction to Environmental Toxicology has found a secure place among the major texts and references in this field. Introduction to Environmental Toxicology, Third Edition seamlessly covers processes and impacts from the molecular level all the way up to population levels. While retaining the strengths of previous editions, the third edition includes a new chapter on fluoride, an update on endocrine disruption, a discussion of the use of models to reconstruct concentration-response curves, expansion of the metals chapter, and new developments in ecological risk assessment for management decisions at site to regional scales. It is an ideal text for introducing students to the fields of ecotoxicology and risk assessment.

<u>Environmental Toxicology</u> Edward A. Laws,2012-12-12 Environmental Toxicology provides a detailed, comprehensive introduction to this key area of sustainability and public health research. The broad coverage includes sections on ecological risk assessment, monitoring, mechanisms, fate and transport, prevention, and correctives, as well as treatment of the health effects of solar radiation and toxicology in the ocean. The 23 state-of-the-art chapters provide a multi-disciplinary perspective on this vital area, which encompasses environmental science, biology, chemistry, and public health.

Environmental Chemistry and Toxicology of Mercury Guangliang Liu, Yong Cai, Nelson O'Driscoll, 2011-11-07 The book that looks at mercury's impact on the planet today Recent research by the EPA has concluded that one in six womenof childbearing age have unsafe levels of mercury in their bodies, which puts 630,000 newborn babies each year at risk of neurological impairment. Mercury poses severe risks to the health of animals andecosystems around the world, and this book provides the essential information that anyone interested in environmental sciences should know about the fundamentals of the entire mercury cycle. Comprised of four parts that present an overview of mercury in the environment, mercury transformations, transport, and bioaccumulation and toxicology, each chapter of Environmental Chemistry and Toxicology of Mercury includes the basic concepts of the targeted subject, a critical review of that subject, and the future research needs. This book explains the environmental behavior and toxicological effects of mercury on humans and other organisms, and provides abaseline for what is known and what uncertainties remain in respect mercury cycling. The chapters focus on the fundamental science underlying the environmental chemistry and fate of mercury. This work will be invaluable to a wide range of policy experts, environmental scientists, and other people requiring acomprehensive source for the state of the science in

thisfield.

PAHs Peter E. T. Douben,2003-07-25 Polycyclic aromatic hydrocarbons (PAHs), or polyarenes, are one of the largest and most structurally diverse class of organic molecules known. High percentages of polyarenes, representing a wide range of molecular sizes and structural types, are present in coal tars and petroleum residues. The major sources of PAHs are crude oil, coal and oil shale. The fuels produced from these fossil sources constitute the primary source of energy for the industrial nations of the world, and the petrochemicals from these raw materials are the basis of the synthetic fibre and plastics industries. PAHs are however, widespread pollutants and their impact on the environment and human health must be monitored and controlled. This book will review and assess our scientific understanding of the ecological exposure and effects PAHs have in different environments and habitats. It will accomplish this by taking the recipients of the pollution in the environment as starting points and working its way back through pathways to access what is required for our understanding of effects and rationale for control. Although this book will concentrate on ecological exposure of PAHs, the general impacts of PAHs on human populations will be touched upon. It is thought to be the first book to focus on the ecological aspects of PAHs.

Forecasting the Environmental Fate and Effects of Chemicals P. S. Rainbow, Steve P. Hopkin, Mark Crane, 2001-05-25 Forecasting the Environmental Fate and Effects of Chemicals is the first book to address specifically the issue of forecasting in environmental toxicology and chemistry from a methodological, regulatory and practical perspective. It is becoming increasingly important for environmental toxicologists and chemists to be able to forecast the fate and effects of chemicals by using existing information to predict the future. Providing a unique and timely opportunity for active researchers and students to obtain in a single volume the 'state of the art' in this expanding field, this text discusses how forecasts can be made by: * using ecotoxicological endpoints at different levels of biological organisation * measuring and modelling chemical fate in biotic and abiotic environments * adopting difference quantitative frameworks Written by an international team of scientists, this text will be essential reading for postgraduate and advance undergraduate students studying ecotoxicology, toxicology, chemistry and environmental statistics aswell as industrial and academic research scientists in environmental toxicology, environmental chemistry and those involved in risk management.

Ecotoxicology and Chemistry Applications in Environmental Management Sven Erik Jorgensen, 2016-08-19 Ecotoxicology and Chemistry Applications in Environmental Management describes how to set up an integrated, holistic approach to addressing ecotoxicological problems. It provides detailed explanations in answer to questions like Why is it necessary to apply an integrated approach? and How does one apply an integrated environmental management approach? Highlighted topics of the book include Environmental chemical calculations QSAR estimation methods Toxic substance interference with other environmental problems Using diagnostic ecological subdisciplines for solutions Cleaner production methods and technologies Environmental risk assessment Addressing one of the most difficult tasks today, this book provides a much-needed holistic view for translating scientific knowledge and research results into effective environmental management measures. Rooted in a seven-step method, it integrates examination and quantification of an environmental problem and describes the use of ecological diagnostic tools to develop a diagnosis for ecosystem health. It also presents methods for choosing and using solutions or combinations of solutions to tackle problems.

<u>Environmental Toxicology</u> Luis M. Botana,2018-05-22 Organic and inorganic chemicals frequently exhibit toxic, mutagenic, carcinogenic, or sensitizing properties when getting in contact with the environment. This comprehensive introduction discusses risk assessment and analysis, environmental fate, transport, and breakdown pathways of chemicals, as well as methods for prevention and procedures for decontamination.

Environmental Pollution S. V. S. Rana,2006 Environmental Pollution: Health and Toxicology offers a comprehensive account of environmental pollution, environmental heath and environmental toxicology. While introducing different types of pollution, it simultaneously describes their effects on ecosystems (ecotoxicology), man, animals and plants. Due emphasis has been given to recently emerging problems viz. indoor air pollution, ground water pollution and solid waste pollution. It incorporates separate chapters on environmental toxicology of heavy metals, pesticides, insecticides and organic solvents. The book is an invaluable resource for those studying environmental pollution, ecology, ecotoxicology, epidemiology, occupational health, public health, environmental chemistry, medicine, environmental engineering and other related disciplines.
