Fugitive Denim: A Moving Story of People and Pants in the Borderless World of Global Trade Rachel Louise Snyder, 2009-04-20 "A fascinating chronicle of the \$55-billion-a-year global denim industry." —David Futrelle, Los Angeles Times Rachel Louise Snyder reports from the far reaches of the multi-billion-dollar denim industry in search of the people who make your clothes. From a cotton picker in Azerbaijan to a Cambodian seamstress, a denim maker in Italy to a fashion designer in New York, Snyder captures the human, environmental, and political forces at work in a complex and often absurd world. Neither polemic nor prescription, *Fugitive Denim* captures what it means to work in the twenty-first century.

*Introduction to Information Retrieval* Christopher D. Manning, Prabhakar Raghavan, Hinrich Schütze, 2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

*Innovative Learning Environments in STEM Higher Education* Jungwoo Ryoo, Kurt Winkelmann, 2021-03-11 As explored in this open access book, higher education in STEM fields is influenced by many factors, including education research, government and school policies, financial considerations, technology limitations, and acceptance of innovations by faculty and students. In 2018, Drs. Ryoo and Winkelmann explored the opportunities, challenges, and future research initiatives of innovative learning environments (ILEs) in higher education STEM disciplines in their pioneering project: eXploring the Future of Innovative Learning Environments (X-FILES). Workshop participants evaluated four main ILE categories: personalized and adaptive learning, multimodal learning formats, cross/extended reality (XR), and artificial intelligence (AI) and machine learning (ML). This open access book gathers the perspectives expressed during the X-FILES workshop and its follow-up activities. It is designed to help inform education policy makers, researchers, developers, and practitioners about the adoption and implementation of ILEs in higher education.

**Nematodes as Biocontrol Agents** Parwinder S. Grewal, Ralf-Udo Ehlers, David I. Shapiro-Ilan, 2005 This book documents and illustrates major developments in the use of nematodes for the biological control of insects and slugs. It covers the use of three main types of nematodes: entomopathogenic nematodes, entomophilic nematodes and slug-parasitic nematodes. The biology, commercial production, formulation and quality control, application technology, strategy and safety of each of these three nematode groups is discussed. The book also examines the application of nematodes in different cropping systems, and the efficacy of nematodes against specific pests. The potential of predatory nematodes to control plant-parasitic nematodes and mycophagous nematodes to control fungal pathogens is also reviewed.

Willings Press Guide 2007 V1 Clare Redman, 2007-02 This press guide aims to provide a comprehensive, accurate and informative guide to the UK press, both print and broadcast.

**The Securitisation of Migration in the EU** Gabriella Lazaridis, Khursheed Wadia, 2015-10-15 Since 9/11 Western states have sought to integrate 'securitisation' measures within migration regimes as asylum seekers and other migrant categories come to be seen as agents of social instability or as potential terrorists. Treating migration as a security threat has therefore increased insecurity amongst migrant and ethnic minority populations.

*Organ Preservation* D.R. Pegg, 2012-12-06 During the past 10 years, there have been many international meetings on the storage of organs prior to transplantation, and several have led to the publication of proceedings; there have also been a number of other books on this subject. Most of these publications have concentrated on practical clinical aspects of organ preservation and on empirical animal experiments directed towards well-defined clinical objectives. Progress was rapid at first, but it is now generally agreed that there has been little improvement in techniques during the past 5 years, although understanding has certainly increased. In 1980 the Tissue Preservation and Banking Committee of the Transplantation Society decided that a fresh approach to the problem of improving preservation methods was needed: it was decided to hold a conference at which an opportunity would be provided to return to basic principles and to examine some of the advances that have occurred in recent years in areas of physiology that might be important for further improvements in preservation. The conference was held in Cambridge, UK, in April 1981 and this book is based upon the papers presented to that meeting and the work of a small discussion group that met after the main meeting. The book starts with six basic review chapters, followed by sections on the effects of ischaemia and anoxia, and on biochemical and pharmacological aspects of hypothermia. Chapters dealing with organ preservation by initial perfusion followed by hypothermia, and by continuous hypothermic perfusion, follow.

**Nanotechnology for Microelectronics and Photonics** Raúl José Martín-Palma, José Martínez-Duart, 2017-06-01 The second edition of *Nanotechnology for Microelectronics and Photonics* has been thoroughly revised, expanded, and updated. The aim of the book is to present the most recent advances in the field of nanomaterials, as well as the devices being developed for novel nanoelectronics and nanophotonic systems. It covers the many novel nanoscale applications in microelectronics and photonics that have been developed in recent years. Looking to the future, the book suggests what other applications are currently in development and may become feasible within the next few decades based on novel materials such as graphene, nanotubes, and organic semiconductors. In addition, the inclusion of new chapters and new sections to keep up with the latest developments in this rapidly-evolving field makes *Nanotechnology for Microelectronics and Photonics, Second Edition* an invaluable reference to research and industrial scientists looking for a guide on how nanostructured materials and nanoscale devices are used in microelectronics, optoelectronics, and photonics today and in future developments. Presents the fundamental scientific principles that explain the novel properties and applications of nanostructured materials in the quantum frontier. Offers clear and concise coverage of how nanotechnology is currently used in the areas of microelectronics, optoelectronics, and photonics, as well as future proposed devices. Includes nearly a hundred problems along with helpful hints and full solutions for more than half of them.

*The Paradoxes of Aid Work* Silke Roth, 2015-03-24 This book explores what attracts people to aidwork and to what extent the promises of aidwork are fulfilled. 'Aidland' is a highly complex and heterogeneous context which includes many different occupations,

forms of employment and organizations. Analysing the processes that lead to the involvement in development cooperation, emergency relief and human rights work and tracing the pathways into and through Aidland, the book addresses working and living conditions in Aidland, gender relations and inequality among aid personnel and what impact aidwork has on the life-courses of aidworkers. In order to capture the trajectories that lead to Aidland a biographical perspective is employed which reveals that boundary crossing between development cooperation, emergency relief and human rights is not unusual and that considering these fields as separate spheres might overlook important connections. Rich reflexive data is used to theorize about the often contradictory experiences of people working in aid whose careers are shaped by geo-politics, changing priorities of donors and a changing composition of the aid sector. Exploring the life worlds of people working in aid, this book contributes to the emerging sociology and anthropology of aidwork and will be of interest to professionals and researchers in humanitarian and development studies, sociology, anthropology, political science and international relations, international social work and social psychology.

**Frontex and Human Rights** Melanie Fink, 2019-02-19 This book analyses the allocation of responsibility for human rights violations that occur in the context of border control or return operations coordinated by Frontex. The analysis is conducted in three parts. The first part examines the detailed roles and powers of Frontex and the states involved during joint operations, focussing on the decision-making processes and chains of command. The second and third parts develop general rules that govern the allocation of responsibility under public international law, ECHR law, and EU non-contractual liability law in order to apply them to Frontex operations. To illustrate the practical implications of the findings, the study uses four hypothetical scenarios that are based on situations that have in the past given rise to human rights concerns. The book concludes that whilst responsibility for most human rights violations lies with the host state of an operation, it often shares this responsibility with participating states who contribute large assets as well as Frontex. However, the book also exposes how difficult it is for individuals to find a place for bringing complaints against violations of their human rights suffered at the EU's external borders. This casts doubts on whether the current legal framework offers them an effective remedy.

**Superconductors** Inamuddin, 2022-11-05 The book presents the current status of superconductor science and technology. It focuses on the design, properties and applications of superconductor materials. The superconductor categories covered include type-I, type-II, bulk, hard, soft, oxide, fermions, organic, iron, Lanthanide-based superconductors, high temperature superconductors and superconducting metamaterials. Keywords: Superconductors, Large-Scale Applications, Bulk Superconductors, Soft Superconductors, Oxide Superconductors, Lanthanide-based Superconductors, High Temperature Superconductors, Superconducting Metamaterials, Medical Applications, Magnetic Imaging Resonance Applications.

*Pesticides in the Diets of Infants and Children* National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Pesticides in the Diets of Infants and Children, 1993-02-01 Many of the pesticides applied to food crops in this country are present in foods and may pose risks to human health. Current regulations are intended to protect the health of the general population by controlling pesticide use. This book explores whether the present regulatory approaches adequately protect infants and children, who may differ from adults in susceptibility and in dietary exposures to pesticide residues. The committee focuses on four major areas: Susceptibility: Are children more susceptible or less susceptible than adults to the effects of dietary exposure to pesticides? Exposure: What foods do infants and children eat, and which pesticides and how much of them are present in those foods? Is the current information on consumption and residues adequate to estimate exposure? Toxicity: Are toxicity tests in laboratory animals adequate to predict toxicity in human infants and children? Do the extent and type of toxicity of some chemicals vary by species and by age? Assessing risk: How is dietary exposure to pesticide residues associated with response? How can laboratory data on lifetime exposures of animals be used to derive meaningful estimates of risk to children? Does risk accumulate more rapidly during the early years of life? This book will be of interest to policymakers, administrators of research in the public and private sectors, toxicologists, pediatricians and other health professionals, and the pesticide industry.

*What We've Lost Is Nothing* Rachel Louise Snyder, 2020-06-09 In her “keenly observed” (Star Tribune, Minneapolis) debut, Rachel Louise Snyder author of the award-winning *No Visible Bruises*, chronicles the twenty-four hours following a mass burglary in a Chicago suburb and the suspicions, secrets, and prejudices that surface in its wake. Nestled on the edge of Chicago’s gritty west side, Oak Park is a suburb in flux. To the west, theaters and shops frame posh houses designed by Frank Lloyd Wright. To the east lies a neighborhood still recovering from urban decline. In the center of the community sits Ilios Lane, a pristine cul-de-sac dotted with quiet homes that bridge the surrounding extremes of wealth and poverty. On the first warm day in April, Mary Elizabeth McPherson, a lifelong resident of Ilios Lane, skips school with her friend Sofia. As the two experiment with a heavy dose of ecstasy in Mary Elizabeth’s dining room, a series of home invasions rocks their neighborhood. At first the community is determined to band together, but rising suspicions soon threaten to destroy the world they were attempting to create. Filtered through a vibrant pinwheel of characters, Snyder’s tour de force evokes the heightened tension of a community on edge as it builds towards an explosive conclusion. Incisive and panoramic, *What We’ve Lost Is Nothing* illuminates the evolving relationship between American cities and their suburbs, the hidden prejudices that can threaten a way of life, and the redemptive power of tolerance in a community torn asunder. “Ideas abound in this thoughtful story, a demonstration of the author’s years of experience as a community organizer. *What We’ve Lost Is Nothing* has the stamp of authenticity” (The Washington Post).

The efforts deployed for assisting the transformation of raw materials into products and services are described. The authors explain the main key success factors or drivers for success of each tool, technique or hybrid combination approach applied to solve manufacturing problems.

**Ecohealth Research in Practice** Dominique F. Charron, 2011-11-25 This book is about doing innovative research to achieve sustainable and equitable change in people’s health and well-being through improved interactions with the environment. It presents experiences from the field of ecosystem approaches to health (or ecohealth research) and some insights and lessons learned. It builds on previous literature, notably Forget (1997), Forget and Lebel (2001), Lebel (2003), and Waltner-Toews et al. (2008). Through case-studies and other contributions by researchers supported by Canada’s International Development Research Centre (IDRC), the book presents evidence of real changes in conditions of people, their health, and the ecosystems that support them. These changes were derived from applications of an ecosystem approach to health in developing regions of the world. The book also illustrates the resulting body of applied, participatory, and action research that improved health and environmental management in developing countries and, in many cases, influenced policies and practices.

**Orbital Debris** National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Space Debris, 1995-07-07 Since the beginning of space flight, the collision hazard in Earth orbit has

increased as the number of artificial objects orbiting the Earth has grown. Spacecraft performing communications, navigation, scientific, and other missions now share Earth orbit with spent rocket bodies, nonfunctional spacecraft, fragments from spacecraft breakups, and other debris created as a byproduct of space operations. Orbital Debris examines the methods we can use to characterize orbital debris, estimates the magnitude of the debris population, and assesses the hazard that this population poses to spacecraft. Potential methods to protect spacecraft are explored. The report also takes a close look at the projected future growth in the debris population and evaluates approaches to reducing that growth. Orbital Debris offers clear recommendations for targeted research on the debris population, for methods to improve the protection of spacecraft, on methods to reduce the creation of debris in the future, and much more.
