*Intelligent Transport Systems in Europe* Mike McDonald,2006 Unluckily, in the recent literature the number of papers on the application of intelligent systems, especially fuzzy sets, have been decreasing considerably. The potential for those applications, however, has not diminished at all. On the contrary, the more complex applications become and the more decision support systems rely on human knowledge and experience, the more relevant and attractive become intelligent techniques. For publications, however, very often the problem arises, that those applications are not suited for publication because they are too complex for any one paper. In this paper it will be attempted to describe important applications in traffic control, in container terminal management and in ground control of airports and give further indications on other possible applications.--Publisher's website.

**Injuries and Violence in Europe** Dinesh Sethi,2006 The deaths and injuries caused by preventable incidents such as road traffic accidents, drowning, poisoning, falls, fires, self-inflicted injuries and substance-abuse related violence have significant human, financial and other costs to society. It is estimated that about 800,000 people in Europe die from injuries every year, and this is the leading cause of death for people aged under 45 years. Using an evidence based approach, this publication examines the scale of the problem, the risk factors and related socio-economic and regional inequalities involved. It considers options for a public health policy framework designed to promote injury prevention through a multi-sectoral response across all levels of government and society throughout the WHO Europe region.
