### **China's Outbound Tourism** Wolfgang Arlt,2006-09-27 The

People's Republic of China has changed from a country which actively discouraged tourism into one of the major source markets

for the international industry; the 35 million Chinese travelling across the border in 2005 are merely the tip of the iceberg. China's Outbound Tourism is the first book on this major development and has been written using a multitude of sources from China and around the world. The topic is approached from many angles, using methods from the fields of economics, political sciences, sociology and cross-cultural studies. The book explains the economic and social background of the surge in tourism and the changes in policy in the country since 1949, when it moved from prevention through controlled development to encouragement of outbound travels. Throughout the book, facts and figures are given for the global development as well as in-depth information about China's key destinations. The growing importance of tourists from China is however not just a question of quantity; the text explains the features which distinguish their travel motivations and behaviours from 'western' and Japanese tourists, and the consequences for product adaptation and marketing methods for destinations interested in attracting and satisfying Chinese tourists. Arlt's groundbreaking book cannot be ignored by professionals, academics and students of tourism and leisure; it offers fresh insight into the topic and indicates some of the future lines of development in this area.

**In the Bubble** John Thackara,2006-02-17 How to design a world in which we rely less on stuff, and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, *In the Bubble: Designing for a Complex World*. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology, so it would be no small matter if tech ceased to be an end-in-itself in our daily lives. Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? *In the Bubble* is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now—not in a remote science fiction future; it's not about, as he puts it, the schlock of the new but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. *In the Bubble* describes services designed to help people carry out daily activities in new ways. Many of these services involve technology—ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles—above all,

lightness—inform the way these services are designed and used. At the heart of In the Bubble is a belief, informed by a wealth of real-world examples, that ethics and responsibility can inform design decisions without impeding social and technical innovation.
