The Evolution of Dasyurid Marsupials Carey Krajewski,Patricia A... Woolley,Michael Westerman,2024-01-22 The marsupial family Dasyuridae has a history of study extending from 18th century naturalists to the modern genomics era. The Evolution of Dasyurid Marsupials: Systematics and Family History tells the story of dasyurid evolution as it unfolded in the context of changing world views on biodiversity, biotic history and scientific methodology, from its roots in Enlightenment taxonomy to its transformation by the Darwinian and Hennigian revolutions, and then its maturation as statistical phylogenetics and phylogenomics. Research on dasyurids includes every major approach in animal systematics, including some for which few comparable examples exist. It extends beyond the recent consensus on species relationships to include the timing of diversification, historical biogeography and the evolution of key phenotypic traits. This book introduces readers to living and fossil dasyurids, the questions evolutionary biologists have asked about them, the inferential methods used to answer those questions and the implications of those answers for understanding the history of this fascinating marsupial family. It offers a comprehensive synthesis of dasyurid evolutionary biology for students, teachers and researchers in mammalian evolution and marsupial biology.

Continental Reactivation and Reworking Geological Society of London,2001 As a result of its bouyancy, continental crust is rarely subducted meaning that successive episodes of continental deformation imparts a complex geological character that is not found in younger oceanic lithosphere.

Groundwater Ecology and Evolution Florian Malard,Christian Griebler,Sylvie Retaux,2023-03-11 Groundwater Ecology and Evolution, Second Edition is designed to meet a multitude of audience needs. The state of the art in the discipline is provided by the articulation of six sections. The first three sections successively carry the reader into the basic attributes of groundwater ecosystems (section 1), the drivers and patterns of biodiversity (section 2), and the roles of organisms in groundwater ecosystems (section 3). The next two sections are devoted to evolutionary processes driving the acquisition of subterranean biological traits (section 4) and the way these traits are differently expressed among groundwater organisms (section 5). Finally, section 6 shows how knowledge acquired among multiple research fields (sections 1 to 5) is used to manage groundwater biodiversity and ecosystem services in the face of future groundwater resource use scenarios. Emphasis on the coherence and prospects of the whole book is given in the introduction and conclusion. Provides a modern synthesis of research dedicated to the study of groundwater biodiversity and ecosystems Bridges the gap between community ecology, evolution, and functional ecology, three research fields that have long been presented isolated from each other Explains how this trans-disciplinary integration of research contributes to understanding and managing of groundwater ecosystem functions Reveals the contribution of groundwater ecology and evolution in solving scientific questions well beyond the frontiers of groundwater systems

Australian Landscapes P. Bishop,B. Pillans,Brad Pillans,2010 Australian Landscapes provides an up-to-date statement on the geomorphology of Australia. Karst, desert, bedrock rivers, coasts, submarine geomorphology, biogeomorphology and tectonics are all covered, aided by the latest geochronological techniques and remote sensing approaches. The antiquity and enduring geomorphological stability of the Australian continent are emphasized in several chapters, but the cutting-edge techniques used to establish that stability also reveal much complexity, including areas of considerable recent tectonic activity and a wide range of rates of landscape change. Links to the biological sphere are explored, in relation both to the lengthy human presence on the continent and to a biota that resulted from Cenozoic aridification of the continent, dated using new techniques. New syntheses of glaciation in Tasmania, aridification in South Australia and aeolian activity all focus on Quaternary landscape evolution.

Status of Conservation and Decline of Amphibians Harold Heatwole,Jodi Rowley,2018-06-01 Amphibians are among the most threatened groups of animals on earth. In part due to their highly permeable skin, amphibians are highly sensitive to environmental changes and pollution and provide an early-warning system of deteriorating environmental conditions. The more we learn about the impact of environmental changes on amphibians, the better we as humans will be able to arrest their demise, and our own. Status of Conservation and Decline of Amphibians brings together the current knowledge on the status of the unique frogs of Australia, New Zealand, and the Pacific. Although geographically proximate, each region presents unique challenges and opportunities in amphibian research and conservation. This book contributes to an understanding of the current conservation status of the amphibians of each region, aims to stimulate research into halting amphibian declines, and provides a better foundation for making conservation decisions. It is an invaluable reference for environmental and governmental agencies, researchers, policy-makers involved with biodiversity conservation, and the interested public.

Campbell Biology Australian and New Zealand Edition Jane B. Reece,Noel Meyers,Lisa A. Urry,Michael L. Cain,Steven A. Wasserman,Peter V. Minorsky,2015-05-20 Over nine successful editions, CAMPBELL BIOLOGY has been recognised as the world's leading introductory biology textbook. The Australian edition of CAMPBELL BIOLOGY continues to engage students with its dynamic coverage of the essential elements of this critical discipline. Crustal Cross Sections from the Western North American Cordillera and Elsewhere Robert Bruce Miller,Arthur W. Snoke,2009 Exposed crustal cross sections provide a unique direct view of continental crust, and are a major source of insights into variations in lithologic and geochemical composition, structural style, metamorphism, plutonism, and rheology with progressive depth through the crust. This volume provides a synthesis of crustal cross sections with a special emphasis on Phanerozoic sections from the western North American Cordillera, supplemented by articles on lower- and mid-crustal sections through Proterozoic crust in North America and Australia, and the classic crustal section of Fiordland, New Zealand. Many of the papers describe multidisciplinary research on crustal sections and include data from various combinations of structural analysis, geochemistry, geothermobarometry, geochronology, geophysics, and other disciplines. The volume also discusses common problems for the interpretation of crustal cross sections, including how sections that expose deep-crustal rocks are eventually exhumed, and leading to the conclusion that there is no simple 'standard model' for continental crust. This volume will be useful to those interested in structural geology, tectonics, geodynamics, regional geology, petrology, geochemistry/isotope geology, and geophysics.--Pub. desc.

Sensory Evolution on the Threshold J. G. M. Hans Thewissen,Sirpa Nummela,2008-02-04 From crocodiles and penguins to seals and whales, this comprehensive and authoritative synthesis explores the function and evolution of sensory systems in animals whose ancestors lived on land. Together, the contributors explore the dramatic transformation of smell, taste, sight, hearing, balance, mechanoreception, magnetoreception, and electroreception that occurred as lineages of amphibians, reptiles, birds, and mammals returned to aquatic environments. Each chapter integrates data from fields including sensory physiology, anatomy, paleontology, and neurobiology. A one-stop source for information on the sense organs of secondarily aquatic tetrapods, Sensory Evolution on the Threshold sheds new light on both the evolution of aquatic vertebrates and the sensory

biology of their astonishing transition.

Tectonics, Climate, and Landscape Evolution Sean D. Willett, 2006-01-01 The Liwu River runs a short course; its channel head at the water divide in Taiwan's Central Range is a mere 35 km from its outflow into the Pacific Ocean. But in those short 35 km, the Liwu has carved one of the world's geographic wonders: the spectacular Taroko Gorge with marble and granite walls soaring nearly 1000 m above the river channel. Taroko Gorge was a fitting venue for a 2003 Penrose Conference that addressed the coupled processes of tectonics, climate, and landscape evolution. The young mountains, extreme weather, and dramatic landforms provided an appropriate backdrop to wide-ranging discussions of geomorphic processes, climate and meteorology, sediment generation and transport, the effects of erosion on tectonics, and new analytical and modeling tools used to address these processes and problems. This volume's papers extend that discussion, reaching across fields that have experienced rapid advances in the past decade.--Publisher's website.

Predators with Pouches Menna Jones, Chris R. Dickman, 2003 'Predators With Pouches' deals with the carnivorous marsupial faunas of Australasia and the Americas. Written by experts in each field from all over the world, it provides a synthesis of current knowledge including paleontology, ecology, behavior and conservation.

Natural Gain in the Grazing Lands of Southern Australia David Floyd Smith, 2000 The central theme of this text is that the introduction of agricultural and pastoral systems in Australia's temperate grazing lands has often created dynamic and sustaining ecosystems. The author argues that while these ecosystems are not native, and while they are not problem-free, they have made an immense contribution to the building of the country - largely in terms of increased soil fertility. This has been done by adding trace elements, superphosphate and legumes, thereby developing a new ecosystem, probably just as self-sustaining as the one it replaced.

Paleozoic and Mesozoic tectonic evolution of central and eastern Asia Gregory Arlen Davis, Marc S, 2001 Hendrix (geology, U. of Montana) and Davis (earth sciences, U. of Southern California) present 19 articles detailing ground-based work on the history of assembly and intracontinental deformation of central and eastern Asia. Chapters look at the structural, thermochronologic, and sedimentary records of the history of Paleozoic assembly in Mongolia and central and western China. Further information is presented on Mesozoic deformation in orogenic belts of central and eastern Asia. Asia's sedimentary basins are examined and the intracontinental deformation they record is documented. Many of these contributions, particularly the papers examining Mongolian geology, are the first ground-based articles written in English. Annotation c. Book News, Inc., Portland, OR (booknews.com)
