Never Work Harder Than Your Students and Other Principles of Great Teaching Robyn R. Jackson, 2010-08-13 Is great teaching a

gift that only a few of us are born with, or is it a skill that can be learned? In *Never Work Harder Than Your Students*, Robyn Jackson makes a radical assertion: Any teacher can become a master teacher by developing a master teacher mindset. The master teacher mindset can be achieved by rigorously applying seven principles to your teaching until they become your automatic response to students in the classroom. The more you practice these seven principles, the more you begin to think like a master teacher: 1. Start where your students are. 2. Know where your students are going. 3. Expect to get your students to their goal. 4. Support your students along the way. 5. Use feedback to help you and your students get better. 6. Focus on quality rather than quantity. 7. Never work harder than your students. Using these principles, Jackson shows you how to become a master teacher no matter where you are in your practice. Each chapter provides a detailed explanation of one of the mastery principles, the steps you need to take to apply them to your own practice, and suggestions for how you can begin practicing the principle in your classroom right away. Jackson offers stories from her own teaching practice, as well as from other teachers she has helped, to show you how each principle works. Teaching is a hard job, but using Jackson's principles will help you and your students reap the rich rewards of that hard work.

Research and Evaluation for Busy Students and Practitioners Helen Kara, 2017-04-26 Even as the pace of research increases, researchers do not exist in a bubble. Brilliantly attuned to the demands placed on today's researchers--people who want to stay on top of their job and still have a life--this book considers how students, academics, and professionals alike can save time and stress without compromising the quality of their work. Drawing on interviews with researchers as well as the author's extensive experience, this fully revised second edition of Helen Kara's *Research and Evaluation for Busy Practitioners* provides a wealth of practical advice on a range of topics like using social media and the diversity of available methodologies, including action research, arts-based methods, and digitally mediated research. Practitioner's Guide to Evaluating Change with Intellectual Assessment Instruments Robert J. McCaffrey, Holly James Westervelt, 2013-03-14 While conducting research on intellectual and neuropsychological performance of various patient populations across time, we became aware of the lack of information concerning practice effects associated with many widely used assessment instruments. Although test-retest data were available for almost all of these instruments, it typically came in the form of correlation coefficients and mean changes in performance between assessments was often absent. In a 1995 article (McCaffrey & Westervelt, 1995), we discussed a number of issues relevant to serial neuropsychological and intellectual assessment and concluded that clinical neuropsychological practitioners had few guidelines to assist them in interpreting

change in a patient's performance across assessments. This volume represents our efforts at reviewing the literature between 1970 and 1998 and extracting the reported information on practice effects. The tables include the assessment instrument used, information on the subject/patient groups, the sample size n , gender, age, intervention, interval between the assessments, scores at both assessment points, and the citation. The tables reflect the existing published literature within intellectual assessment and, therefore, some instruments (e.g., Wechsler tests) comprise a majority of the tables whereas others (e.g., Raven's Progressive Matrices, Stanford-Binet) do not. The test index is arranged by the name of the test as reported in the specific article. We caution readers to refer to the original articles if additional or more specific information is needed.

Remediation in Medical Education Adina Kalet, Calvin L. Chou, 2013-11-26 Remediation in medical education is the act of facilitating a correction for trainees who started out on the journey toward becoming excellent physicians but have moved off course. This book offers an evidence-based and practical approach to the identification and remediation of medical trainees who are unable to perform to standards. As assessment of clinical competence and professionalism has become more sophisticated and ubiquitous, medical educators increasingly face the challenge of implementing effective and respectful means to work with trainees who do not yet meet expectations of the profession and society. Remediation in Medical Education: A Mid-Course Correction describes practical stepwise approaches to remediate struggling learners in fundamental medical competencies; discusses methods used to define competencies and the science underlying the fundamental shift in the delivery and assessment of medical education; explores themes that provide context for remediation, including professional identity formation and moral reasoning, verbal and nonverbal learning disabilities, attention deficit disorders in high-functioning individuals, diversity, and educational and psychiatric

topics; and reviews system issues involved in remediation, including policy and leadership challenges and faculty development.

Nurse Practitioners in Primary Care Naomi

It analyzes the different nurse practitioners models around the world and presents a proposal for the UK. Using research material to describe the impact of this kind of nurse practitioners on patients, doctors and other nurses, the book proposes practical steps through which this model can be implemented and considers the professional implications for doctors and nurses.

Parents and Family Planning Services Ann

Cartwright,2017-07-12 Parents and Family Planning Services focuses on parents of a sample of newborns in twelve areas of England and Wales during the 1970s. The parents were asked about their contraceptive practices, attitudes toward different

methods of birth control, and opinions of-and experience with-different types of services. General practitioners, health visitors, and doctors at family planning clinics were interviewed about their views and practices. This juxtaposition of the attitudes of parents and professionals highlights the reasons why people do not use effective methods of birth control, and leads to suggestions as to how they could be helped to do so. Several chapters discuss fathers' attitudes and actions, the views of parents and professionals, and the influence of religion, social class, education, and geographic location. The final chapter is concerned with possible changes in contraceptive habits, and the ways in which services can develop to help more women avoid unwanted pregnancies. The work has ongoing policy implications, and also indicates how attitudes and change evolve over time. Parents and Family Planning Services is predicated on the assumption that unwanted fertility is to be avoided. It underscores the need for a proliferation of different sorts of services: more clinics, an increase in the help and advice given at hospitals, the development of a supportive and integrated home service. This volume is a significant contribution to the literature in this vital field. It remains essential reading for both professionals and concerned policy personnel, particularly those interested in the evolution of policy and practice.
