Specification and Verification of Declarative Open Interaction Models Marco Montali,2010-07-16 Many novel application scenarios and architectures in business process management or service composition are characterized by a distribution of activities and resources, and by complex interaction and coordination dynamics. In this book, Montali answers fundamental questions on open and declarative modeling abstractions via the integration and extension of quite diverse approaches into a computational logic-based comprehensive framework. This framework allows non IT experts to graphically specify interaction models that are then automatically transformed into a corresponding formal representation and a set of fully automated sound and complete verification facilities. The book constitutes a revised and extended version of the author's PhD thesis, which was honored with the 2009 "Marco Cadoli" prize, awarded by the Italian Association for Logic Programming for the most outstanding thesis focusing on computational logic, discussed between the years 2007 and 2009.

Checking Executive Power Jody C. Baumgartner,Naoko Kada,2003-10-30 Baumgartner, Kada, and their contributors examine presidential impeachment in such varied settings as the United States, Russia, Colombia, Brazil, Venezuela, the Philippines, and Madagascar. In all of these countries there has been a serious impeachment attempt within the past decade or so. The results of each impeachment attempt vary, from unsuccessful attempts to those which were successful; in the latter case, some resulted in presidents remaining in office, others in removal of the president, and, in one case, the forced resignation of a president. The common framework of each analysis includes a discussion of the historical and constitutional bases of the presidency, the institutional balance of power, provisions for impeachment, and the structure of party politics in each country; in addition, the role that public opinion plays in the process is discussed. While broad, the framework permits comparison between the cases and some general conclusions about all phases of the impeachment process and executive accountability can be drawn. One of the most important conclusions is that contrary to popular wisdom, impeachment is most definitively not a strictly legal process, but rather one that is highly political from start to finish. As the volume makes clear, it is most useful to view impeachment by way of examining the intersection of executive-legislative relations, partisan political conflict, and public opinion.

Development of executive function during childhood Yusuke Moriguchi,Philip D Zelazo,Nicolas Chevalier,2016-04-01 Executive function refers to the goal-oriented regulation of one’s own thoughts, actions, and emotions. Its importance is attested by its contribution to the development of other cognitive skills (e.g., theory of mind), social abilities (e.g., peer interactions), and academic achievement (e.g., mathematics), and by the consequences of deficits in executive function (which are observed in wide range of developmental disorders, such as attention-deficit hyperactivity disorder and autism). Over the last decade, there have been growing interest in the development of executive function, and an expanding body of research has shown that executive function develops rapidly during the preschool years, with adult-level performance being achieved during adolescence or later. This recent work, together with experimental research showing the effects of interventions targeting executive function, has yielded important insights into the neurocognitive processes underlying executive function. Given the complexity of the construct of executive function, however, and the multiplicity of underlying processes, there are often inconsistencies in the way that executive function is defined and studied. This inconsistency has hampered communication among researchers from various fields. This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function. Researchers using various methods, including, behavioral experiments, neuroimaging, eye-tracking, computer simulation, observational methods, and questionnaires, are encouraged to contribute original empirical research. In addition to original empirical articles, theoretical reviews and opinions/perspective articles on promising future directions are welcome. We hope that researchers from different areas, such as developmental psychology, educational psychology, experimental psychology, neuropsychology, neuroscience, psychiatry, computational science, etc., will be represented in the Research Topic.
