Quilts: Central Extensions, Braid Actions, and Finite Groups Tim Hsu,2007-05-06 Quilts are 2-complexes used to analyze actions and subgroups of the 3-string braid group and similar groups. This monograph establishes the fundamentals of quilts and discusses connections with central extensions, braid actions, and finite groups. Most results have not previously appeared in a widely available form, and many results appear in print for the first time. This monograph is accessible to graduate students, as a substantial amount of background material is included. The methods and results may be relevant to researchers interested in infinite groups, moonshine, central extensions, triangle groups, dessins d'enfants, and monodromy actions of braid groups.

Liquidated Damages and Extensions of Time Brian Eggleston,2009-01-26 Liquidated damages and extensions of time are complex subjects,frequently forming the basis of contract claims made under thestandard building and civil engineering contracts. Previouseditions of Liquidated Damages and Extensions of Time are highlyregarded as a guide for both construction industry professionalsand lawyers to this complex area. The law on time and damages continues to develop with an increasingflow of judgments from the courts. Alongside this, the standardforms of contract have also developed over time to reflectprevailing approaches to contractual relationships. Against thisbackground a third edition will be welcomed by constructionprofessionals and lawyers alike. Retaining the overall approach ofthe previous editions, the author clarifies, in a highly readablebut legally rigorous way, the many misunderstandings on time anddamages which abound in the construction industry. The thirdedition takes account of a large volume of new case law since theprevious edition was published over ten years ago, includes a newchapter on delay analysis and features significantly expandedchapters on penalty clauses, the effects of conditions precedentand time-bars, and the complexities of causation.

Investigation of the Effects of Leading-edge Chord-extensions and Fences in Combination with Leading-edge Flaps on the Aerodynamic Characteristics at Mach Numbers from 0.40 to 0.93 of a 45 Degree Sweptback Wing of Aspect Ratio 4 Kenneth P. Spreemann,1957 This investigation was made to determine the effects of 6 degree full-span and 3 degree partial-span leading-edge flaps in combination with chord-extensions or fences on the aerodynamic characteristics of a wing-fuselage configuration with a 45 degree sweptback wing of aspect ratio 4, taper ratio 0.3, and NACA 65A006 airfoil sections. The investigation was made in the Langley high-speed 7- by 10-foot tunnel over a Mach number range of 0.40 to 0.93 and an angle-of-attack range of about -2 degrees to 24 degrees. Lift, drag, and pitching-moment data were obtained for all configurations. From overall considerations of stability and performance it appears that with the model of this investigation the 6 degree full-span leading-edge flaps in combination with the chord-extension over the outboard 35 percent of the span, with or without leading-edge camber, would be the most desirable configuration.

Investigation of the Effects of Leading-edge Chord-extensions and Fences in Combination with Leading-edge Flaps on the Aerodynamic Characteristics at Mach Numbers of 0.40 to 0.93 of a 45° Sweptback Wing of Aspect Ratio 4 Kenneth P. Spreemann,William J. Alford,1957

Skew PBW Extensions William Fajardo,Claudia Gallego,Oswaldo Lezama,Armando Reyes,Héctor Suárez,Helbert Venegas,2020-12-11 This monograph is devoted to a new class of non-commutative rings, skew Poincaré-Birkhoff-Witt (PBW) extensions. Beginning with the basic definitions and ring-module theoretic/homological properties, it goes on to investigate finitely generated projective modules over skew PBW extensions from a matrix point of view. To make this theory constructive, the theory of Gröbner bases of left (right) ideals and modules for bijective skew PBW extensions is developed. For example, syzygies and the Ext and Tor modules over these rings are computed. Finally, applications to some key topics in the noncommutative algebraic geometry of quantum algebras are given, including an investigation of semi-graded Koszul algebras and semi-graded Artin-Schelter regular algebras, and the noncommutative Zariski cancellation problem. The book is addressed to researchers in noncommutative algebra and algebraic geometry as well as to graduate students and advanced undergraduate students.

Flat Extensions of Positive Moment Matrices: Recursively Generated Relations Raúl E. Curto,Lawrence A. Fialkow,1998 In this book, the authors develop new computational tests for existence and uniqueness of representing measures μ in the Truncated Complex Moment Problem: $\gamma_{ij} = \int \bar{z}^i z^j d\mu$, $0 \leq i+j \leq 2n$. Conditions for the existence of finitely atomic representing measures are expressed in terms of positivity and extension properties of the moment matrix $M(n)(\gamma)$ associated with $\gamma \equiv \gamma_{(2n)}$: $\gamma_{00} > 0$, $\gamma_{0,2n}, \dots, \gamma_{2n,0} > 0$. This study includes new conditions for flat (i.e., rank-preserving) extensions $M(n+1)$ of $M(n)$; each such extension corresponds to a distinct rank $M(n)$ -atomic representing measure, and each such measure is minimal among representing measures in terms of the cardinality of its support. For a natural class of moment matrices satisfying the tests of recursive generation, recursive consistency, and normal consistency, the existence problem for minimal representing measures is reduced to the solubility of small systems of multivariable algebraic equations. In a variety of applications, including cases of the quartic moment problem ($n=2$), the text includes explicit contructions of minimal representing measures via the theory of flat extensions. Additional computational texts are used to prove non-existence of representing measures or the non-existence of minimal representing measures. These tests are used to illustrate, in very concrete terms, new phenomena, associated with higher-dimensional moment problems that do not appear in the classical one-dimensional moment problem.

Manis Valuations and Prüfer Extensions I Manfred Knebusch,Digen Zhang,2004-10-20 The present book is devoted to a study of relative Prüfer rings and Manis valuations, with an eye to application in real and

p-adic geometry. If one wants to expand on the usual algebraic geometry over a non-algebraically closed base field, e.g. a real closed field or p-adically closed field, one typically meets lots of valuation domains. Usually they are not discrete and hence not noetherian. Thus, for a further develomemt of real algebraic and real analytic geometry in particular, and certainly also rigid analytic and p-adic geometry, new chapters of commutative algebra are needed, often of a non-noetherian nature. The present volume presents one such chapter.

Elliptic Extensions in Statistical and Stochastic Systems Makoto Katori,2023-04-06 Hermite's theorem makes it known that there are three levels of mathematical frames in which a simple addition formula is valid. They are rational, q-analogue, and elliptic-analogue. Based on the addition formula and associated mathematical structures, productive studies have been carried out in the process of q-extension of the rational (classical) formulas in enumerative combinatorics, theory of special functions, representation theory, study of integrable systems, and so on. Originating from the paper by Date, Jimbo, Kuniba, Miwa, and Okado on the exactly solvable statistical mechanics models using the theta function identities (1987), the formulas obtained at the q-level are now extended to the elliptic level in many research fields in mathematics and theoretical physics. In the present monograph, the recent progress of the elliptic extensions in the study of statistical and stochastic models in equilibrium and nonequilibrium statistical mechanics and probability theory is shown. At the elliptic level, many special functions are used, including Jacobi's theta functions, Weierstrass elliptic functions, Jacobi's elliptic functions, and others. This monograph is not intended to be a handbook of mathematical formulas of these elliptic functions, however. Thus, use is made only of the theta function of a complex-valued argument and a real-valued nome, which is a simplified version of the four kinds of Jacobi's theta functions. Then, the seven systems of orthogonal theta functions, written using a polynomial of the argument multiplied by a single theta function, or pairs of such functions, can be defined. They were introduced by Rosengren and Schlosser (2006), in association with the seven irreducible reduced affine root systems. Using Rosengren and Schlosser's theta functions, non-colliding Brownian bridges on a one-dimensional torus and an interval are discussed, along with determinantal point processes on a two-dimensional torus. Their scaling limits are argued, and the infinite particle systems are derived. Such limit transitions will be regarded as the mathematical realizations of the thermodynamic or hydrodynamic limits that are central subjects of statistical mechanics.

How Hair Extensions are Sourced, Treated and Graded Diane Shawe, The hair extension bible informs you about what you don't know as a budding hair extension technician, consultant or trainer can be harmful to your clients and your business. This book is a summary of years of work and research with hair and some of what has been noted throughout that time by other reports and blogs. For instance what is the effects of the swelling of Hair? Swelling is one of the most damaging conditions of the hair. It loses flexibility, natural bounce, elasticity, and strength and is much easier to break how can you avoid this? How is hair treated once it gets to the factory? Once the hair arrives at the factory, it is treated in a hydrochloric acid bath to remove the cuticle. A word of warning - hydrochloric acid is extremely hazardous. Please do not put yourself at risk by experimenting with this chemical! But back to the problem. It's not the remy hair; remy hair is relatively easy to process and the damage inflicted during de-cuticalization is slight. Non-remy hair is the villain. A little book full of facts and advice that will keep you informed and up to date with the hair extension products
