Understanding Extreme Sports: A Psychological Perspective Eric Brymer,Francesco Feletti,Erik Monasterio,Robert D. Schweitzer,2020-03-30 Extreme sports, those activities that lie on the outermost edges of independent adventurous leisure activities, where a mismanaged mistake or accident would most likely result in death, have developed into a significant worldwide phenomenon (Brymer & Schweitzer, 2017a). Extreme sport activities are continually evolving, typical examples include BASE (an acronym for Buildings, Antennae, Span, Earth) jumping and related activities such as proximity flying, extreme skiing, big wave surfing, waterfall kayaking, rope free solo climbing and high-level mountaineering. While participant numbers in many traditional team and individual sports such as golf, basketball and racket sports have declined over the last decade or so, participant numbers in so called extreme sports have surged. Although extreme sports are still assumed to be a Western pastime, there has been considerable Global uptake. Equally, the idea that adventure sports are only for the young is also changing as participation rates across the generations are growing. For example, baby boomers are enthusiastic participants of adventure sports more generally (Brymer & Schweitzer, 2017b; Patterson, 2002) and Generation Z turn to extreme sports because they are

popular and linked to escapism (Giannoulakis & Pursglove, 2017). Arguably, extreme sports now support a multi-billion dollar industry and the momentum seems to be intensifying. Traditional explanations for why extreme sports have become so popular are varied. For some, the popularity is explained as the desire to rebel against a society that is becoming too risk averse, for others it is about the spectacle and the merchandise that is associated with organised activities and athletes. For others it is just that there are a lot of people attracted by risk and danger or just want to show off. For others still it is about the desire to belong to sub-cultures and the glamour that goes with extreme sports. Some seek mastery in their chosen activity and in situations of significant challenges. This confusion is unfortunate as despite their popularity there is still a negative perception about extreme sports participation. There is a pressing need for clarity. The dominant research perspective has focused on positivist theory-driven perspectives that attempt to match extreme sports against predetermined characteristics. For the most part empirical research has conformed to predetermined societal perspectives. Other ways of knowing might reveal more nuanced perspectives of the human dimension of extreme sport participation. This special edition brings together cutting-edge research and thought examining psychology and extreme sports, with particular attention paid to the examination of motivations for initial participation, continued participation, effective performance, and outcomes from participation. Commonwealth leaders have consistently endorsed the role that SDP can play in development and peace work, in particular in the domain of youth engagement and empowerment. Phenomenology and the Extreme Sport Experience Eric Brymer, Robert

Schweitzer, 2017-03-27 Understanding the motivations behind those who partake in extreme sports can be difficult for some. If the popular conception holds that the incentive behind extreme sports participation is entirely to do with risking one's life, then this confusion will continue to exist. However, an in-depth examination of the phenomenology of the extreme sport experience yields a much more complex picture. This book revisits the definition of extreme sports as those activities where a mismanaged mistake or accident would most likely result in death. Extreme sports are not necessarily synonymous with risk and participation may not be about risk-taking. Participants report deep inner transformations that influence world views and meaningfulness, feelings of coming home and authentic integration as well as a freedom beyond the everyday. Phenomenologically, these experiences have been interpreted as transcendent of time, other, space and body. Extreme sport participation therefore points to a more potent, life-enhancing endeavour worthy of further investigation. This book adopts a broad hermeneutic phenomenological approach to critique the assumed relationship to risk-taking, the death wish and the concept of No Fear in extreme sports, and repositions the experience in a previously unexplored manner. This is valuable reading for students and academics interested in Sports Psychology, Social Psychology, Health Psychology, Tourism, Leisure Studies and the practical applications of phenomenology.

This ambitious new volume offers state-of-the-art overviews of the development of every major sport or classification of sport, examining their history, socio-cultural significance, political economy and international reach, and suggesting directions for future research. Adventure and Extreme Sports Injuries Omer Mei-Dan, Mike Carmont, 2012-11-13 Adventure and extreme sports are increasing in popularity and it is not surprising that commercial adventure tourism and the accompanying life style and fashion, have become increasingly important to world economy. These unique sports involve not only major physical endurance and mental challenges but interaction and bonding with nature. They also tend to attract and excite audiences, both at the event and in the media. They are exciting to watch and redraw the boundaries of human achievement with

the accompanying risks of injury and death. Adventure sports are usually performed in beautiful, exciting and remote locations or in extreme environments far away from medical assistance. Extreme sports usually involve an element of increased risk. These risks are highlighted by the media, usually after a reported accident or fatality but may vary according to the involvement of the participant; the weekend recreational adventure sports athlete or the experienced professional. A wide variety of sports fall into the category of adventure and extreme sports and with an increasing number of disciplines, this field is ever expanding. Sports are performed in contact with the “ground”; mountain running and biking, rock climbing, ice climbing and mountaineering. In the air: skydiving and base jumping. On water: surfing, white water kayaking and rafting, board sailing and diving. And also involve mechanical vehicles and animals! Some sports may be performed as a combination of few disciplines, such as water and air, e.g. kite surfing, and as so involve very unique mechanisms of injury. Sports events can also be merged to form a multi-sport race comprising many disciplines lastly from single to multi day races. Sports may involve competition with others, against the environment or with oneself, frequently the most ferocious adversary. Adventure sports are becoming increasingly popular in the general public and a few take these sports to an extreme level with the accompanying risks. Those that do, bring such time and dedication that they become professional in terms of training, preparation and finance. More and more people are enjoying adventure sports and unfortunately increased numbers are becoming injured as a result. Future research is progressing alongside the sport development, to allow the sport mechanisms, injury patterns and predisposing factors to be better understood. It is the hope of all researchers to make the sports safer without detracting from their adventurous nature. The aim and scope of our book would be to bring the sports medicine involved in each of these sports into one volume. We would explain each sport including

subtle similarities and differences, the common injury mechanisms, patterns of injury and treatment options. Additional chapters would include the mental characteristics of adventure racers and extreme sports athletes, together with the complexities of competing in hot and cold extreme environments. The book will present chapters focussing on the sports listed below, concentrating on published literature and newly formed studies by experts in the fields of injury epidemiology, prevention, management and rehabilitation.

Agents of Change Eric Blehm, 2003 In less than a decade, DC shoes has become an action sports icon. In 1994, Ken Block, Damon Way, and Clay Blehm, the cofounders of DC shoes, revolutionized skateboarding shoes and clothing by incorporating innovative technology and style into their designs. They ignored industry trends and held true to a vision that changed action sports products and marketing forever. The three built DC shoes one T-shirt -- and eventually two shoes -- at a time from the ground up, creating in the process an international name. DC's pioneering attitude was sought out and shared by like-minded athletes, and the DC Shoes team was formed. These once-overlooked and misunderstood superstars are among the most talented and driven professionals and amateurs in their fields. In this photographic tribute, DC salutes its team members and their achievements, a new generation of sports with such athletes as: Skateboarding: Danny Way, Colin McKay, Rob Dyrdek, Josh Kalis, Stevie Williams, Anthony Van Engelen; BMX: Dave Mirra, Colin Winkelmann; Snowboarding:

Todd Richards, Scotty Wittlake; Surfing: Andy and Bruce Irons; Motorcross: Ricky Carmichael, Jeff Emig, Mike Cinqmars. This is the story of a garage company that initially couldn't even afford a garage. It celebrates the DC athletes who risk life and limb as the ultimate culmination of team talent in the action sports community. It's DC's salute to the passion that drives people to push their personal limits -- in the business, in sports, and in life.

Women in Action Sport Cultures Holly Thorpe, Rebecca Olive, 2016-11-09 Young, white men have dominated action sports for many years, yet women have refused to accept positions on the margins of these unique sporting cultures. Developing in a different context to many traditional sports, girls and women have adopted highly proactive approaches and developed unique strategies to negotiate space alongside their male peers in the waves, skate parks and cityscapes, on mountains and climbing walls, along trails, as well as around rinks. This international collection features contributions from a group of leading and emerging researchers, many of whom are passionate action sport participants themselves. With authors representing a range of theoretical and disciplinary perspectives including cultural studies, sociology, performance studies, media studies, sport for development, and education, this book offers the first collective focus on women in action sports cultures in the past, present and into the future. Ultimately, the book offers a vivid and powerful illustration of the new and ongoing struggles facing women in contemporary sporting cultures, as well as the various strands of activism, agency and politics being performed in the surf, on the slopes, and at the crag. The book will be of interest to students and scholars in the fields of sociology of sport and physical culture, gender studies, youth cultures, sport history, and pedagogy and education.

Fitness for Life Charles B. Corbin, Guy C. Le Masurier, Dolly D. Lambdin, Meg Greiner, 2010 A program that focuses attention on schoolwide wellness during four weeks of the school year. Helps

schools incorporate coordinated activities that will enable them to meet national standards and guidelines for physical activity and nutrition.

Action Sports and the Olympic Games Belinda Wheaton, Holly Thorpe, 2021-11-04 Based on a decade of research by two leading action sports scholars, this book maps the relationship between action sports and the Olympic Movement, from the inclusion of the first action sports to those featuring for the first time in the Tokyo Olympic Games and beyond. In an effort to remain relevant to younger audiences, four new action sports, surfing, skateboarding, sport climbing, and BMX freestyle were included in the Tokyo Olympic program. Drawing upon interviews with Olympic insiders, as well as leaders, athletes, and participants in these action sports communities, the book details the impacts on the action sports industry and cultures, and offers national comparisons to show the uneven effects resulting from Olympic inclusion. It reveals the intricate workings of power and politics in contemporary sports organisations, and maps key trends in this changing sporting landscape. Action Sports and the Olympic Games is a fascinating read for anybody studying the Olympics, the sociology of sport, action sports, or sport policy.
