**Eyes on the Sky** Francis Graham-Smith, 2016 Four centuries ago, Galileo first turned a telescope to look up at the night sky. His discoveries opened the cosmos, revealing the geometry and dynamics of the solar system. Today's telescopic equipment, stretching over the whole spectrum from visible light to radio and millimetre astronomy, through infrared to ultraviolet, X-rays and gamma rays, has again transformed our understanding of the whole Universe. In this book Francis Graham-Smith explains how this technology can be engaged to give us a more in-depth picture of the nature of the universe. Looking at both ground-based telescopes and telescopes on spacecraft, he analyses their major discoveries, from planets and pulsars to cosmology. Large research teams and massive data handling are necessary, but the excitement of discovery is increasingly shared by a growing public, who can even join in some of the analysis by remote computer techniques. Observational astronomy has become international. All major projects are now partnerships; most notably the Square Kilometre Array, which will involve astronomers from over 100 countries and will physically exist in several of them. Covering the history and development of telescopes from Galileo to the present day, *Eyes on the Sky* traces what happens when humankind looks up.

**Through Their Eyes** Stephen Hess, 2006-01-17 Americans often forget that, just as they watch the world through U.S. media, they are also being watched. Foreign correspondents based in the United States report news and provide context to events that are often unfamiliar or confusing to their readers back home. Unfortunately, there has been too little thoughtful examination of the foreign press in America and its role in the world media. *Through Their Eyes* fills this void in the unmistakable voice of Stephen Hess, who has been reporting on reporting for over a quarter century. Globalization is shrinking the planet, making it more important than ever to know what is going on in the world and how those events are being interpreted elsewhere. September 11 was a chilling reminder that how others perceive us does matter, like it or not. Hess seeks to answer three basic yet essential journalistic questions: Who are these U.S.-based foreign correspondents? How do they operate? And perhaps most important, what do they report, and how? Informed by scores of interviews and armed with original survey research, Hess reveals the mindset of foreign correspondents from a broad sample of countries. He examines how reporting from abroad has changed over the past twenty years and addresses the daunting challenges facing these journalists, ranging from home-office politics to national stereotypes. Unique among works on the subject, this book provides an engaging and humanizing Day in the Life? section, illustrating how foreign correspondents conduct their daily activities. This book continues the author's comprehensive Newsworld series on the nexus of media, government, and politics. These five books, starting with *The Washington Reporters* (Brookings, 1981), have become valuable reference materials for all who seek to understand this intersection of journalism and government. *Through Their Eyes* furthers that rich tradition, making it essential and enjoyable reading.

Dubielzig, Charles Schobert, 2012-01-05 The evolution of the eye spans 3.75 billion years from single cell organisms with eyespots to Metazoa with superb camera style eyes. **New Eyes on the Universe** Stephen Webb, 2012-05-19 "New Eyes on the Universe - Twelve Cosmic Mysteries and the Tools We Need to Solve Them" gives an up-to-date broad overview of some of the key issues in modern astronomy and cosmology. It describes the vast amount of

observational data that the new generation of observatories and telescopes are currently producing, and how that data might solve some of the outstanding puzzles inherent in our emerging world view. Included are questions such as: What is causing the Universe to blow itself apart? What could be powering the luminous gamma-ray bursters? Where is all the matter in the Universe? Do other Earths exist? Is there intelligent life out there? The renowned author explains clearly, without recourse to mathematics, why each question is puzzling and worthy of research. Included in the study of the wide range of sensitive and powerful instruments used by scientists to try and solve these problems are ones which capture electromagnetic radiation and 'telescopes' for cosmic rays, neutrinos, gravitational waves, and dark matter. This book discusses twelve areas of active astronomical research, ranging from the nature of dark energy to the existence or otherwise of extraterrestrial civilizations, and devotes one chapter to each topic. Although astronomers tackle each of these questions using information gleaned from all possible wavelengths and sources (and this is emphasized throughout the book), in this work the author dedicates each chapter to a particular observational method. One chapter covers X-ray telescopes for investigating black holes, while another uses infrared telescopes to learn more about planetary information.

**The Eyes of the Desert Rats** David Syrett,2014-08-19 Made up of members of the Coldstream and Scots Guards, British Yeomanry cavalry regiments, New Zealanders, South Africans, and Indian Army men, the Long Range Desert Group was perhaps the most effective of all the special forces established by the Allies during the Second World War. It was able to go thousands of miles into enemy territory, well-armed and carrying its own supplies of petrol, food and even water to last for weeks at a time - something quite new in military history. Using experience acquired in WWI and inter-war exploration travels, the LRDG thus developed the ability to appear almost anywhere in the desert to carry out almost every type of ground reconnaissance mission possible in desert warfare, exploring and mapping the terrain, transporting agents behind enemy lines or determining the strength and location of enemy forces with an extraordinary degree of accuracy and detail and thus able to verify or hide Ultra intelligence. Equally important were their skills in the art of desert navigation, demonstrated in the outflanking of the enemy during the Allied advance from El Alamein westward to Tunisia, as led by the LRDG. Once it had teamed up with the Special Air Service (SAS), made up of British, Free French, Commonwealth and Jewish Palestinian soldiers, the LRDG perfected the art of irregular mechanized warfare conducted in the rear of the enemy's forces in the desert, attacking enemy installations of all kinds, mining roads, raiding airfields, destroying enemy aircraft on the ground and inflicting losses upon the enemy in inverse proportion to their own remarkably low rate of casualties. Through meticulous research in original archival material, this book thus tells the extraordinary story of how a relatively small number of dedicated men developed the methods and techniques for crossing by motor vehicle the depths of the then unmapped and seemingly impassable great deserts of Egypt and Libya, the Western Desert, during the British Army's North African Campaign of 1940-43. The Long Range Desert Group and the Special Air Service as a matter of course did extraordinary things - the heroic was the commonplace. Their tactics, techniques and remarkable success in desert warfare continue to make them of great interest to the student of military affairs. Likewise, as it seeks to answer how the deep desert can best be used for military purposes, this study is pertinent to today's military operations, perhaps more so than at any time since World War II. ...this study provides fresh insights into the nature of desert warfare, past, present and future... [and] reveals the peculiarities of this warfare often lost to modern armies... a virtual primer, useful to commanders and soldiers alike. At long last this book can find its rightful place in the classroom of military courses and colleges and in the hands of those interested in the intricacies, complexities and problems of military operations in desert regions. From the Foreword to the book by Colonel (Retired) David M. Glantz.

**Eyes on the Sporting Scene, 1870-1930** Pamela A. Bakker, 2013-02-18 Helms Hall of Fame's brothers William M. and Andrew B. June Rankin lived exciting lives covering sports for papers like the New York Sunday Mercury, New York Herald, New York World, Brooklyn Daily Eagle and New York Clipper from 1870 to 1930. Playing for amateur and semiprofessional Rockland County (N.Y.) clubs in the mid-1860s through early 1870s, the brothers developed into baseball writers and editors. Often working with Henry Chadwick, called the Father of Baseball, the brothers became authorities on the sport, writing histories of clubs and players, and scoring for the early New York and Brooklyn clubs. June went on to cover boxing as it transitioned into a gentlemen's sport, football as it emerged on college campuses, and golf through the formative years of the USGA and PGA. He also wrote two baseball books. Filled with sporting details, this book sets the brothers into a period of great changes in the world of American sports.

*TxNxM1* J.M. Debois, 2006-05-08 Although distant metastases are the most dreaded situation in the evolution of cancer of every organ, the medical literature has surprisingly given little attention to the anatomical relationship between the primary tumor and metastatic sites. Only risk factors, treatment possibilities, and survival results are extensively examined. Stimulated by the occurrence in his practice of some puzzling and unexpected metastases, the author reviewed more than 12,000 references. He looked for anatomical relationships highlighting the relation between the location of the primary tumors and the particular patterns of metastasis observed. It would seem that the 'pathways and flows' are apparently a more decisive factor in the implantation of the metastases than the 'seed and soil' properties of the cancer cells and the metastatic site. Aided by his colleague Dr. T. Geukens, M.D., the author includes original anatomical drawings, illustrating the sometimes unexpected pathways the cancer cells follow in order to reach the organs where they will become lodged and give rise to metastatic tumors. The subject has apparently not been exhausted in the literature and several ideas are given for further research.

**F.B. Eyes** William J. Maxwell, 2016-12-06 How FBI surveillance influenced African American writing Few institutions seem more opposed than African American literature and J. Edgar Hoover's white-bread Federal Bureau of Investigation. But behind the scenes the FBI's hostility to black protest was energized by fear of and respect for black writing. Drawing on nearly 14,000 pages of newly released FBI files, F.B. Eyes exposes the Bureau's intimate policing of five decades of African American poems, plays, essays, and novels. Starting in 1919, year one of Harlem's renaissance and Hoover's career at the Bureau, secretive FBI ghostreaders monitored the latest developments in African American letters. By the time of Hoover's death in 1972, these ghostreaders knew enough to simulate a sinister black literature of their own. The official aim behind the Bureau's close reading was to anticipate political unrest. Yet, as William J. Maxwell reveals, FBI surveillance came to influence the creation and public reception of African American literature in the heart of the twentieth century. Taking his title from Richard Wright's poem *The FB Eye Blues*, Maxwell details how the FBI threatened the international travels of African American writers and prepared to jail dozens of them in times of national emergency. All the same, he shows that the Bureau's paranoid style could prompt insightful criticism from Hoover's ghostreaders and creative replies from their literary targets. For

authors such as Claude McKay, James Baldwin, and Sonia Sanchez, the suspicion that government spy-critics tracked their every word inspired rewarding stylistic experiments as well as disabling self-censorship. Illuminating both the serious harms of state surveillance and the ways in which imaginative writing can withstand and exploit it, *F.B. Eyes* is a groundbreaking account of a long-hidden dimension of African American literature.
