Discrete Choice Methods with Simulation Kenneth Train,2009-07-06 This book describes the new generation of discrete choice methods, focusing on the many advances that are made possible by simulation. Researchers use these statistical methods to examine the choices that consumers, households, firms, and other agents make. Each of the major models is covered: logit, generalized extreme value, or GEV (including nested and cross-nested logits), probit, and mixed logit, plus a variety of specifications that build on these basics. Simulation-assisted estimation procedures are investigated and compared, including maximum simulated likelihood, method of simulated moments, and method of simulated scores. Procedures for drawing from densities are described, including variance reduction techniques such as anithetics and Halton draws. Recent advances in Bayesian procedures are explored, including the use of the Metropolis-Hastings algorithm and its variant Gibbs sampling. The second edition adds chapters on endogeneity and expectation-maximization (EM) algorithms. No other book incorporates all these fields, which have arisen in the past 25 years. The procedures are applicable in many fields, including energy, transportation, environmental studies, health, labor, and marketing.

Executive Functions and the Frontal Lobes Vicki Anderson,Rani Jacobs,Peter J. Anderson,2010-10-18 This volume has as its primary aim the examination of issues concerning executive function and frontal lobe development. While many texts have addressed these issues, this is the first to do so within a specifically developmental framework. This area of cognitive function has received increasing attention over the past decade, and it is now established that the frontal lobes, and associated executive functions, are critical for efficient functioning in daily life. It is also clear, and of particular relevance to this text, that these functions develop gradually through childhood, and then deteriorate during old age. These developmental trajectories, and the impact of any interruption to them, are the focus of this volume.

Management of Periprosthetic Joint Infection Klaus-Dieter Kühn,2017-09-29 Periprosthetic joint infection (PJI) is among the most serious complications in the field of endoprosthetics. The number of PJIs is increasing worldwide and poses a real interdisciplinary challenge for everyone involved. For the patient concerned, it is necessary to promptly work out an adequate therapy solution to fight off the infection. Both the clinical experience of the surgeon and the proper diagnostic processes are prerequisite for the reliable detection and identification of an infection. The microbiologist is responsible for identifying the causative germs by screening the patient's synovial fluid and tissue samples. Based on the findings and subsequent resistance testing, the infectious disease specialist can recommend the appropriate antibiotic therapy. Furthermore, the clinical pharmacist is

consulted regularly throughout the therapy to discuss the risk of potential drug interactions. The surgeon will proceed with the revision surgery, following defined algorithms. Adequate radical debridement of infected and necrotic surrounding tissue is the most important step towards a successful cure of the infection. Accompanying the surgery, anti-infective agents are given systemically and locally. While systemic application of anti-infectives mainly reduces the number of haematogenic-spreading planktonic germs, local application immediately forms a colonization barrier and protects the implant from sessile biofilm formation. Concurrently, antibiotics are actively released from the implant, resulting in local germ reduction. Thus, local agents are embedded in the concept of surgical PJI treatment as a reliable adjuvant measure and they sustainably support the successful outcome. In one-stage procedures, local agents are released from specialized antibiotic-loaded bone cements, while in two- or multi-stage procedures, local agents are released from corresponding temporary spacers (interim prostheses). Even from an economic standpoint, the combination of systemic and local agent application is meaningful. Furthermore, there are some interesting trends towards the coating of metallic implants to protect against biofilm formation on the implant surface. On the basis of their personal experience, specialists from all over the world present, explain and discuss preventive approaches, appropriate diagnostic strategies for detection, reproducible effective surgical treatments as well as the economic impact of PJI. The reader can use this book as a solid platform for comparing their own approach to PJI treatment with the specialists' recommendations.

What Are You Going to Do with Your Life? J.D. Greear, 2020-10-13 God has a plan to make your life count for eternity. Stop wasting it. You want your life to matter. To mean something. But if you're like most people, you probably don't have a compelling answer to the question, "What are you going to do with your life?" In this book, J.D. Greear considers Jesus' radical call to give your life away to the greatest cause of all. To view your life from the perspective of eternity. To start making decisions now that you'll be glad you made then. It's time to put your "yes" on the table and let God put it on the map.

The Palgrave Handbook of American Mental Health Policy Howard H. Goldman, Richard G. Frank, Joseph P. Morrissey, 2019-05-07 This handbook is the definitive resource for understanding current mental health policy controversies, options, and implementation strategies. It offers a thorough review of major issues in mental health policy to inform the policy-making process, presenting the pros and cons of controversial, significant issues through close analyses of data. Some of the topics covered are the effectiveness of various biomedical and psychosocial interventions, the role of mental illness in violence, and the effectiveness of coercive strategies. The handbook presents cases for conditions in which specialized mental health services are needed and those in which it might be better to deliver mental health treatment in mainstream health and social services settings. It also examines the balance between federal, state, and local authority, and the financing models for delivery of efficient and effective mental health services. It is aimed for an audience of policy-makers, researchers, and informed citizens that can contribute to future policy deliberations.

Finance for Development Barbara Stallings, 2006-03-08 Access to finance is critical in setting the course for development in emerging market economies. In this innovative study, which provides the first book-length analysis of the Latin American financial sector, Barbara Stallings and Rogerio Studart examine the dramatic changes resulting from financial liberalization in the region. The authors begin by discussing the critical transformations taking place in Latin America since 1990—a period marked by acceleration toward a new open, market-oriented development model, and away from a semi-closed model relying heavily on the state. Stallings and Studart examine changes in ownership of the financial sector and government regulation of banking, evaluate the role of capital markets as a source of finance, and compare Latin America's financial sector to that of East Asia. The second section of the book features case studies that demonstrate the changes occurring in Chile, Mexico, and Brazil with particular reference to finance for investment and access to credit. The authors conclude with a set of policy recommendations aimed at strengthening Latin American banks and capital markets so that they can play a greater role in supporting economic development.
