Syria and Lebanon 1941 David Sutton, 2022-02-17 A detailed study of the Syrian and Lebanon campaign of World War II. In June 1941, Australian, British, Indian and Free French forces invaded the Vichy French-controlled mandate of Syria and Lebanon. They faced an enemy that had more artillery, tanks and aircraft. They fought in rocky, mountainous terrain, through barren valleys and across swollen rivers, and soon after the initial advance faced a powerful Vichy French counter-attack on key strategic positions. Despite these difficulties, the Allies prevailed, and in doing so ensured that the territory did not fall into German or pro-German hands, and thus provide a springboard from which Axis forces could attack British oil interests in Iraq, the key territory of Palestine or the Suez Canal. This book examines the high military and political strategy that lay behind the campaign, as well as the experiences and hardships as endured by the men on the ground. The battles in Syria and Lebanon were complex actions, often at the battalion level or below, and this work uses extensive war diaries and available records to make sense of the actions and examine how they affected the wider

campaign.

Lessons from the Local Group Kenneth Freeman, Bruce Elmegreen, David Block, Matthew Woolway, 2014-11-13 Our understanding of galaxy formation comes mostly from two sources: sensitive observations at high angular resolution of the high-redshift Universe, where galaxies are observed to be forming, and detailed observations of individual stars and clouds in the Local Group, where telltale remnants from its formative time remain and similar processes operate at a low level today. The current conference focusses on key aspects of the Local Group, composed of the Milky Way, Andromeda and Triangulum Spiral Galaxies, the Large and Small Magellanic Cloud galaxies, numerous dwarf and irregular galaxies, and intergalactic gas. Topics include the halo and thick disk of the Milky Way with its first stars and stellar streams; the Milky Way bar, bulge and outer edge; interstellar dust and turbulence; star

formation processes and stellar scattering in spiral arms; views through the infrared Eyes of the Spitzer Space Telescope; globular clusters; the Local Gould Belt; stellar metallicities and elemental abundances; the environment and black hole in the Milky Way nucleus; orbits of the Magellanic Clouds and galaxy dwarfs; interstellar dust and turbulence; the outer disks and halos of the Andromeda and Triangulum galaxies; ripples from a collision in Andromeda; and arcs of carbon stars in the Triangulum and intergalactic clouds. This volume also discusses surveys of planetary nebulae, galaxy morphology at low and high redshift, cosmic evolution of star and galaxy formation and gas accretion, Lyman alpha emitting galaxies, ultra-low surface brightness imaging, and more. Readers are given a clear and comprehensive view of this wide range of topics written by specialists in each field. This is the proceedings of an International Conference at the Seychelles archipelago in May 2014, on the occasion of the 60th birthday of David Block and the millionth (base two) birthday of Bruce Elmegreen.
