JL Elias

*E-Z ECG Rhythm Interpretation* Henry B Geiter, Jr,2006-12-01 Use analogies to make basic ECG concepts comprehensible and memorable for your students! The anatomy of the heart is like a house with rooms and doors. The intra-atrial and internodal pathways are like highways. Your students will absorb ECG interpretation like a sponge! This diverting, EZ-to-read approach, coupled with sound educational theory, encourages learning in students who are frustrated by the non-descriptive, formulaic writing found in most other textbooks.

**The Structure of Time** W. H. Newton-Smith,2018-10-10 Originally published in 1980. What is time? How is its structure determined? The enduring controversy about the nature and structure of time has traditionally been a diametrical argument between those who see time as a container into which events are placed, and those for whom time cannot exist without events. This controversy between the absolutist and the relativist theories of time is a central theme of this study. The author's impressive arguments provide grounds for rejecting both these theories, firstly by establishing that 'empty' time is possible, and secondly by showing, through a discussion of the structure of time which involves considering whether time might be cyclical, branching, beginning or non-beginning, that the absolutist theory of time is untenable. This book then advances two new theories, and succeeds in shifting the traditional debate about time to a consideration of time as a theoretical structure and as a theoretical framework.
