What begins as an innocent intellectual discussion turns into a sexually explosive New Year’s Eve party after George extends an invitation to Pip and her two live-in boyfriends, raising the question: What ultimately binds human beings together?

Rescue David Miliband, 2017-11-14 We are in the midst of a global refugee crisis. Sixty five million people are fleeing for their lives. The choices are urgent, not just for them but for all of us. What can we possibly do to help? With compassion and clarity, David Miliband shows why we should care and how we can make a difference. He takes us from war zones in the Middle East to peaceful suburbs in America to explain the crisis and show what can be done, not just by governments with the power to change policy but by citizens with the urge to change lives. His innovative and practical call to action shows that the crisis need not overwhelm us. Miliband says this is a fight to uphold the best of human nature in the face of rhetoric and policy that humor the worst. He defends the international order built by western leaders out of the ashes of World War II, but says now is the time for reform. Describing his family story and drawing revealing lessons from his life in politics, David Miliband shows that if we fail refugees, then we betray our own history, values, and interests. The message is simple: rescue refugees and we rescue ourselves.

Postharvest Physiology of Perishable Plant Products Stanley Kays,2012-04-19 There are two primary reasons for offering a broad overview of postharvest physiology. First, many critical functions that are operative during plant growth shift after harvest when the input of energy, water, and other essential requisites ceases in most products. Consequently, postharvest physiology differs substantially from what is covered in a typical plant physiology text. Second, the value of the majority of live agricultural plant products approximately doubles between harvest and retail sales. The total cost of losses occurring late in the production-harvest-marketing sequence are substantially greater than those incurred during the production phase. Likewise, inputs essential to prevent or minimize these losses are often only a minute fraction of the overall costs for the product. Therefore, a better understanding of the functional processes after harvest makes both biological and economic sense. This book focuses on the functional processes controlling physical and chemical changes in live plants and plant products after harvest. The objective is to provide a concise overview of the theoretical principles and processes governing these changes. Examples include agronomic crops, fruits, nuts, vegetables, flowers, woody ornamentals, seeds, and other forms of plant propagules and turf grasses, with individual examples ranging from intact plants to pollen. Emphasis is placed on the basic postharvest physiological principles rather than on detailing optimum storage and handling conditions for individual crops. The latter information can be found in several excellent reference books cited in the text.
