Creating Digital Faces for Law Enforcement

Michael W. Streed,2017-01-25 Today, law enforcement requires actionable and real-time intelligence; 24 hours a day, seven days a week to help respond to cases efficiently. When evidence is lacking in a case, law enforcement officers are often times left to rely on eyewitness descriptions. In order to quickly disseminate facial composites to news outlets and social media, law enforcement needs to rely on every tool available; including traditional forensic artists and advanced facial composite software. Creating Digital Faces for Law Enforcement provides the proper foundation for obtaining key information needed to create effective facial composites. There are two main methods to create a facial composite, first through traditional forensic art techniques and second by using commercially developed facial composite software. Traditional forensic art has advanced from pen and paper to more enhanced digital tools. This text reviews the development of digital tools used by the forensic artist describing each tool in detail. Creating Digital Faces for Law Enforcement is the first text of its kind to address the creation of digital sketches for forensic artists and software-driven sketches for non-artist/technicians. A step-by-step guide addressing the creation of digital, software-driven, sketches for non-artist technicians Includes descriptions supported by both

photographs and video demonstrations to assist the reader in better understanding the process Written by an internationally-recognized police sketch artist with over 35 years of experience A companion website page will host author created / narrated videos for reader access

The Fantastical Adventure Books - Premium Collection Henry Rider Haggard, 2022-11-13 She is one of the classics of imaginative literature, and one of the best-selling books of all time. She was extraordinarily popular upon its release and has never been out of print. The story is a first-person narrative that follows the journey of Horace Holly and his ward Leo Vincey to a lost kingdom in the African interior. There they encounter a primitive race of natives and a mysterious white queen named Ayesha who reigns as the all-powerful She, or She-who-must-be-obeyed. In this work, Rider Haggard developed the conventions of the Lost World subgenre, which many later authors emulated. Ayesha, the Return of She is a gothic-fantasy novel, a sequel to his far more popular and well known novel, She. The People of the Mist is the tale of a British adventurer seeking wealth in the wilds of Africa, finding romance, and discovering a lost race and its monstrous god. Allan and the Ice-Gods features the famous character Allan Quartermain, and it is based on an idea given to Haggard by Rudyard Kipling. The story details Quartermain's past life regression to a stone-age ancestor and the various adventures involved. She and Allan is a novel, in which Haggard brought together his two most popular characters, Ayesha from She (to which it

serves as a prequel), and Allan Quatermain from King Solomon's Mines. Table of Contents: She: A History of Adventure The World's Desire Eric Brighteyes The People of the Mist Ayesha Wisdom's Daughter Heu-Heu Allan and the Ice-gods Love Eternal She and Allan Sir Henry Rider Haggard (1856-1925) was an English writer of adventure novels set in exotic locations, predominantly Africa, and a pioneer of the Lost World literary genre.

Processing Images of Faces Vicki Bruce, 1992 The human face poses a challenge to engineers, computer scientists, and psychologists alike. This book integrates different contributions by combining detailed review articles with general overviews of the relationship between different kinds of research on faces and contemporary problems in vision and cognition. Theoretical developments in this area are increasingly dependent on computer technology, both because image-processing techniques allow us to display and manipulate faces for experiments in ways that were not feasible with old photographic technology and because theoretical ideas can be expressed and tested more rigorously using computer simulation. The psychological contributions in this volume

illustrate current theoretical developments that are heavily dependent on image processing and computer simulation. As technology improves, so it becomes increasingly feasible to automate many aspects of face processing normally taken for granted to develop new technological aids. Therefore, this volume also includes examples of computing developments for forensic purposes, for the simulation of plastic surgery, and for automatic animation for applications in telecommunications and creative arts.

Handbook of Research on Face Processing Andrew
W. Young, Hadyn Ellis, 1989 The high degree of
scientific interest in face processing is readily
understandable, since people's faces provide such
a wealth of social information. Moreover,
investigations have produced evidence of highly
precocious face processing abilities in infants,
and of neural mechanisms in adults that seem to be

differentially involved in face perception. Such findings demonstrate that, as one might expect, the psychological importance of the face has clear biological underpinnings. There are also urgent practical reasons for wanting to understand face processing. The most extensively investigated of these involve forensic issues. Other applications include the development of automated recognition systems for security and other purposes, and understanding and rehabilitating disorders and impairments linked to brain injuries and psychiatric conditions. Current studies of face processing are grouped in the volume into eleven topic areas. For each area, the editors approached an acknowledged authority and commissioned a review chapter summarising the findings that have been made. These chapters were then circulated to other experts who were asked to write brief commentaries that developed theoretical or empirical points of importance to each area. In this way, a balanced coverage of each topic is achieved. The book begins with a section examining the evidence suggesting that there may be something 'special' about face processing. This is followed by consideration of the face as a visual pattern. Then there are four sections dealing with major uses of facial information, followed by sections discussing the development of face processing abilities and the neural mechanisms involved. The last three sections of the book deal with topics for which there are important practical applications for the studies reported.
