**A History of Fake Things on the Internet** Walter Scheirer,2023-12-05 As all aspects of our social and informational lives increasingly migrate online, the line between what is real and what is digitally fabricated grows ever thinner—and that fake content has undeniable real-world consequences. *A History of Fake Things on the Internet* takes the long view of how advances in technology brought us to the point where faked texts, images, and video content are nearly indistinguishable from what is authentic or true. Computer scientist Walter J. Scheirer takes a deep dive into the origins of fake news, conspiracy theories, reports of the paranormal, and other deviations from reality that have become part of mainstream culture, from image manipulation in the nineteenth-century darkroom to the literary stylings of large language models like ChatGPT. Scheirer investigates the origins of Internet fakes, from early hoaxes that traversed the globe via Bulletin Board Systems (BBSs), USENET, and a new messaging technology called email, to today's hyperrealistic, AI-generated Deepfakes. An expert in machine learning and recognition, Scheirer breaks down the technical advances that made new developments in digital deception possible, and shares behind-the-screens details of early Internet-era pranks that have become touchstones of hacker lore. His story introduces us to the visionaries and mischief-makers who first deployed digital fakery and continue to influence how digital manipulation works—and doesn't—today: computer hackers, digital artists, media forensics specialists, and AI researchers. Ultimately, Scheirer argues that problems associated with fake content are not intrinsic properties of the content itself, but rather stem from human behavior, demonstrating our capacity for both creativity and destruction.

Lee,Sang-Soo Yeo,2009-06-18 Welcome to the Third International Conference on Information Security and Assurance (ISA 2009). ISA 2009 was the most comprehensive conference focused on the various aspects of advances in information security and assurance. The concept of security and assurance is emerging rapidly as an exciting new paradigm to provide reliable and safe life services. Our conference provides a chance for academic and industry professionals to discuss recent progress in the area of communication and networking including modeling, simulation and novel applications associated with the utilization and acceptance of computing devices and systems. ISA 2009 was a successor of the First International Workshop on Information Assurance in Networks (IAN 2007, Jeju-island, Korea, December, 2007), and the Second International Conference on Information Security and Assurance (ISA 2008, Busan, Korea, April 2008). The goal of this conference is to bring together researchers from academia and industry as well as practitioners to share ideas, problems and solutions relating to the multifaceted aspects of information technology. ISA 2009 contained research papers submitted by researchers from all over the world. In order to guarantee high-quality proceedings, we put extensive effort into reviewing the papers. All submissions were peer reviewed by at least three Program Committee members as well as external reviewers. As the quality of the submissions was quite high, it was extremely difficult to select the papers for oral presentation and publication in the proceedings of the conference.

Gog & Magog Jerry Pollock, 2011-05 Satan is on a quest to bring about the End of Days in this riveting thriller by Jerry Pollock. Satan, long banished from Heaven by God, begins his quest for world domination in the Garden of Eden, where he tempts Eve to eat a fig from the Tree of Knowledge of Good and Evil. Traveling forward in time, Satan finds himself in present-day America-where the President and his son Cain are his descendants. Standing between Satan and his unholy mission are some unforgettable characters who represent the good in humankind. Abel Slobodkin is a righteous young man, and doesn't realize it, but he has been chosen by God to battle against Satan's evil plans. He will clearly need the help of his future mother-in-law, Dr. Elizabeth Corsini, a brilliant psychiatrist at a Washington, DC, hospital. In the course of treating a mental patient, reporter Esther Hirsch, Elizabeth begins to realize that Esther's recurring nightmare is not just the product of a troubled mind, it is both biblical in nature-and represents a covert operation being carried on by the White House. Elizabeth soon realizes there is a conspiracy in the works, called Code Name Daniel, and people involved are turning up dead. She realizes she is next to be killed unless she, and her sister, FBI agent Daniela Corsini, trade their information on operation Code Name Daniel, for their lives. A showdown takes place after the president wins reelection in 2020, and Cain becomes his powerful chief of staff. God and Satan order Abel and Cain to fight a duel, which takes place against the

backdrop of Arlington National Cemetery. In a climax that is both harrowing and uplifting, God returns to make his presence known to Earth by performing miracles incredible to Him, and the hidden meaning of Gog and Magog is revealed.

Building an Intelligence-Led Security Program Allan Liska,2014-12-10 As recently as five years ago, securing a network meant putting in a firewall, intrusion detection system, and installing antivirus software on the desktop. Unfortunately, attackers have grown more nimble and effective, meaning that traditional security programs are no longer effective. Today's effective cyber security programs take these best practices and overlay them with intelligence. Adding cyber threat intelligence can help security teams uncover events not detected by traditional security platforms and correlate seemingly disparate events across the network. Properly-implemented intelligence also makes the life of the security practitioner easier by helping him more effectively prioritize and respond to security incidents. The problem with current efforts is that many security practitioners don't know how to properly implement an intelligence-led program, or are afraid that it is out of their budget. Building an Intelligence-Led Security Program is the first book to show how to implement an intelligence-led program in your enterprise on any budget. It will show you how to implement a security information a security information and event management system, collect and analyze logs, and how to practice real cyber threat intelligence. You'll learn how to understand your network in-depth so that you can protect it in the best possible way. Provides a roadmap and direction on how to build an intelligence-led information security program to protect your company. Learn how to understand your network through logs and client monitoring, so you can effectively evaluate threat intelligence. Learn how to use popular tools such as BIND, SNORT, squid, STIX, TAXII, CyBox, and splunk to conduct network intelligence.
