Open/close Jan-Hendrik Hafke, Anette Hochberg, Joachim Raab, 2010 In this first volume in the SCALE series, 'Open / Close', a simple yet significant part of any building - the opening - is illustrated in all its different aspects, from idea to implementation. As well as the different types of component-windows, doors, gates, loggias, filters - this volume deals with building structures. It is also concerned with the significance of the opening in building design. Openings define the relationship between a building and the space outside it, helping to characterize a location. In this book, all of the elements that mediate between interior and exterior spaces are classified both in terms of construction and design. Each of them is described and dealt with in detail. All the internationally renowned projects used here as examples are both practical and generally applicable. The projects have not been chosen for their homogeneous architectural language, but for the high quality of their architecture. --Book Jacket.
