Fespa Digital/Fruit Logistica Wolfgang Tillmans,2012 About one year ago, Wolfgang Tillmans was prompted by his own curiosity to visit Fruit Logistica in Berlin, the most important convention for the international fruit trade.'I was left open-mouthed by the crazy displays and the variety and complexity of th

Textiles, Identity and Innovation: Design the Future Gianni Montagna,Cristina Carvalho,2018-10-03 D_TEX presents itself as a starting point at a crossroads of ideas and debates around the complex universe of Textile Design in all its forms, manifestations and dimensions. The textile universe, allied to mankind since its beginnings, is increasingly far from being an area of exhausted possibilities, each moment proposing important innovations that need a presentation, discussion and maturation space that is comprehensive and above all inter- and transdisciplinary. Presently, the disciplinary areas where the textile area is present are increasing and important, such as fashion, home textiles, technical clothing and accessories, but also construction and health, among others, and can provide new possibilities and different disciplinary areas and allowing the production of new knowledge. D_TEX proposes to join the thinking of design, with technologies, tradition, techniques, and related areas, in a single space where ideas are combined with the technique and with the projectual and research capacity, thus providing for the creation of concepts, opinions, associations of ideas, links and connections that allow the conception of ideas, products and services. The interdisciplinary nature of design is a reality that fully reaches the textile material in its essence and its practical application, through the synergy and contamination by the different interventions that make up the multidisciplinary teams of research. The generic theme of D_TEX Textile Design Conference 2017, held at Lisbon School of Architecture of the University of Lisbon, Portugal on November 2-4, 2017, is Design the Future, starting from the crossroads of ideas and debates, a new starting point for the exploration of textile materials, their identities and innovations in all their dimensions.

Computer Technology for Textiles and Apparel Jinlian Hu,2011-07-14 Computer technology has transformed textiles from their design through to their manufacture and has contributed to significant advances in the textile industry. Computer technology for textiles and apparel provides an overview of these innovative developments for a wide range of applications, covering topics including structure and defect analysis, modelling and simulation, and apparel design. The book is divided into three parts. Part one provides a review of different computer-based technologies suitable for textile materials, and includes chapters on computer technology for yarn and fabric structure analysis, defect analysis and measurement. Chapters in part two discuss modelling and simulation principles of fibres, yarns, textiles and garments, while part three concludes with a review of computer-based technologies specific to apparel and apparel design, with themes ranging from 3D body scanning to the teaching of

computer-aided design to fashion students. With its distinguished editor and international team of expert contributors, Computer technology for textiles and apparel is an invaluable tool for a wide range of people involved in the textile industry, from designers and manufacturers to fibre scientists and quality inspectors. Innovation Trends in Plastics Decoration and Surface Treatment Edward B Crutchley,2014-08-11 The plastics industry is a major player for consumer items, notably for the automotive, consumer electronics and packaging industries, and is necessarily very active in innovation. As a result, moulded thermoplastics are achieving new heights in decorative appearance and quality. Many striking aesthetic effects are possible by employing new polymer blends coupled with a diverse range of decoration and surface treatment technologies. These can produce three-dimensional and tactile finishes, high definition images, flawless high gloss and metallic surfaces, as well as effects ranging from imitation materials, interferential colours, colour gradients, colour change and travel, gloss and matte combinations, and even acoustic or olfactory effects. Manufacturing processes to achieve these include several types of in-mould film, coating or decorating technique, relatively recent technologies to improve surface quality, as well as traditional separate decorating or coating processes such as dry offset; flexographic; inkjet; pad and screen printing; foil transfer; labelling; laser marking; plating; spray coating; and vacuum deposition. This unique book analyses and compares recent trends in each of over 20 types of mainstream manufacturing process and 10 classes of sensory effect they can produce. Supported by over 100 tables, a 3-year sampling of over 1,000 mentioned patent documents and hundreds of commercial developments helps to identify the main trends and their innovators, key innovative clusters and the most sought-after effects, as well as provide indications for the future.

Innovative Approaches in Computational Structural Engineering George C. Tsiatas,Vagelis Plevris,2020-04-22 Nowadays, numerical computation has become one of the most vigorous tools for scientists, researchers and professional engineers, following the enormous progress made during the last decades in computing technology, in terms of both computer hardware and software development. Although this has led to tremendous achievements in computer-based structural engineering, the increasing necessity of solving complex problems in engineering requires the development of new ideas and innovative methods for providing accurate numerical solutions in affordable computing times. This collection aims at providing a forum for the presentation and discussion of state-of-the-art innovative developments, concepts, methodologies and approaches in scientific computation applied to structural engineering. It involves a wide coverage of timely issues on computational structural engineering with a broad range of both research and advanced practical applications. This Research Topic encompasses, but is not restricted to, the following scientific areas: modeling in structural engineering; finite element methods; boundary element methods; static and dynamic analysis of structures; structural stability; structural mechanics; meshless methods; smart structures and systems; fire engineering; blast engineering; structural reliability; structural health monitoring and control; optimization; and composite materials, with application to engineering structures.

Wolfgang Tillmans Wolfgang Tillmans,Dominic Eichler,2011 Apart from his seminal portraits, party images, and still lifes that gained him recognition in the nineties, Wolfgang Tillmans (1968 in Remscheid) long ago began dealing with more abstract motifs. In the past decade he has consistently developed his approach to create totally non-representational works that examine themes such as the process of exposure and image

supports. From the delicate veils of color in Blushes and Freischwimmer or the sculptural paper drops made of rolled-up photographic paper, to the colorfully compelling works of the Lighter series, the photograph itself--essentially divorced from its reproductive function--becomes the objet d'art, as the book here, designed by the artist himself, impressively demonstrates. --Publisher description.

Digital Printing of Textiles H Ujiie, 2006-04-28 At present the textile industry produces the majority of its 34 billion square yards of printed textile fabric by screen printing. However as we move into the digital age developments in digital printing of paper are being adapted more and more for the textile market. Inkjet textile printing is growing while growth in analog textile printing remains stagnant. As digital print technologies improve offering faster production and larger cost-effective print runs, digital printing will grow to become the technology that provides the majority of the world's printed textiles. This comprehensive introduction to the subject is broken into five sections. After two introductory chapters, it goes on to look in a number of detailed chapters at printer and print head technologies. The next section examines the printer software required for successful colour design and management. The digital printing colouration process is explored next, with chapters on substrate preparation, pigmented ink, aqueous inkjet ink, pre-treatment and printing on cationized cotton with reactive inks. The book is concluded with three chapters on the design and business aspect of digital printing. Digital printing of textiles contains fundamental technical explanations along with recent research, and is an invaluable guide for product developers, retailers, designers and academic researchers. Provides coverage of all the current developments in digital textile printing Covers important areas such as printer and print head technologies, printer software, digital printing colouration and design and business for digital printing

Surface Modification of Textiles Q Wei, 2009-08-26 The surface of textiles offers an important platform for functional modifications in order to meet special requirements for a variety of applications. Concluding chapters discuss surface modification strategies for various applications of textiles. Surface modification of textiles is a valuable resource for chemists, surface scientists, textile technologists, fibre scientists, textile engineers and textile students. Reviews fundamental issues relating to textiles surfaces and their characterisation Examines various types of surface modification suitable for textiles, including plasma treatments and nanoparticles Discusses surface modification strategies for textile applications such as expansion into technical textile applications

Anthropocene Psychology Matthew Adams, 2020-01-24 This ground-breaking book critically extends the psychological project, seeking to investigate the relations between human and more-than-human worlds against the backdrop of the Anthropocene by emphasising the significance of encounter, interaction and relationships. Interdisciplinary environmental theorist Matthew Adams draws inspiration from a wealth of ideas emerging in human-animal studies, anthrozoology, multi-species ethnography and posthumanism, offering a framing of collective anthropogenic ecological crises to provocatively argue that the Anthropocene is also an invitation – to become conscious of the ways in which human and nonhuman are inextricably connected. Through a series of strange encounters between human and nonhuman worlds, Adams argues for the importance of cultivating attentiveness to the specific and situated ways in which the fates of multiple species are bound together in the Anthropocene. Throughout the book this argument is put into practice, incorporating everything from Pavlov's dogs, broiler chickens, urban trees, grazing sheep and beached

whales, to argue that the Anthropocene can be good to think with, conducive to a seeing ourselves and our place in the world with a renewed sense of connection, responsibility and love. Building on developments in feminist and social theory, anthropology, ecopsychology, environmental psychology, (post)humanities, psychoanalysis and phenomenology, this is fascinating reading for academics and students in the field of critical psychology, environmental psychology, and human-animal studies.
