Using Physical Science Gadgets and Gizmos, Grades 6-8 Matthew Bobrowsky, Mikko Korhonen, Jukka Kohtamäki ,2014-04-01 What student—or teacher—can resist the chance to experiment with Rocket Launchers, Sound Pipes, Drinking Birds, Dropper Poppers, and more? The 35 experiments in *Using Physical Science Gadgets and Gizmos, Grades 6–8*, cover topics including pressure and force, thermodynamics, energy, light and color, resonance, and buoyancy. The authors say there are three good reasons to buy this book: 1. To improve your students' thinking skills and problem-solving abilities. 2. To get easy-to-perform experiments that engage students in the topic. 3. To make your physics lessons waaaaay more cool. The phenomenon-based learning (PBL) approach used by the authors—two Finnish teachers and a U.S. professor—is as educational as the experiments are attention-grabbing. Instead of putting the theory before the application, PBL encourages students to first experience how the gadgets work and then grow curious enough to find out why. Students engage in the activities not as a task to be completed but as exploration and discovery. The idea is to help your students go beyond simply memorizing physical science facts. *Using Physical Science Gadgets and Gizmos* can help them learn broader concepts, useful thinking skills, and science and engineering practices (as defined by the Next Generation Science Standards). And—thanks to those Sound Pipes and Dropper Poppers—both your students and you will have some serious fun. For more information about hands-on materials for

Gonzo Gizmos Simon Quellen Field, 2003-12-01
Step-by-step instructions to building more than 30 fascinating devices are included in this book for workbench warriors and grown-up geeks. Detailed illustrations and diagrams explain how to construct a simple radio with a soldering iron, a few basic circuits, and three shiny pennies. Instructions are included for a rotary steam engine that requires a candle, a soda can, a length of copper tubing, and just 15 minutes. To use optics to roast a hot dog, no electricity or stove is required, just a flexible plastic mirror, a wooden box, a little algebra, and a sunny day. Also included are experiments most science teachers probably never demonstrated, such as magnets that levitate in midair, metals that melt in hot water, a Van de Graaff generator made from a pair of empty soda cans, and lasers that transmit radio signals. Every experiment is followed by an explanation of the applicable physics or chemistry.

The Familiar, Volume 2 Mark Z.

Danielewski, 2015-10-27 NATIONAL BEST SELLER From the author of the international best seller *House of Leaves* and National Book Award-nominated *Only Revolutions* comes a monumental new novel as dazzling as it is riveting. *The Familiar* (Volume 1) ranges from Mexico to Southeast Asia, from Venice, Italy, to Venice, California, with nine lives hanging in the balance, each called upon to

make a terrifying choice. They include a therapist-in-training grappling with daughters as demanding as her patients; an ambitious East L.A. gang member contracted for violence; two scientists in Marfa, Texas, on the run from an organization powerful beyond imagining; plus a recovering addict in Singapore summoned at midnight by a desperate billionaire; and a programmer near Silicon Beach whose game engine might unleash consequences far exceeding the entertainment he intends. At the very heart, though, is a twelve-year-old girl named Xanther who one rainy day in May sets out with her father to get a dog, only to end up trying to save a creature as fragile as it is dangerous . . . which will change not only her life and the lives of those she has yet to encounter, but this world, too—or at least the world we think we know and the future we take for granted. (With full-color illustrations throughout.) Like the print edition, this eBook contains a complex image-based layout. It is most readable on e-reading devices with larger screen sizes.
