How did the use of calculator affect the students' attitude towards learning mathematics? Kwan Lung Chan,2018-11-06 Essay from the year 2014 in the subject Didactics - Common Didactics, Educational Objectives, Methods, grade: 2.7, Education University of Hong Kong (Department of Asian and Policy Studies - Education University of Hong Kong), course: CUM3002 Comparative Curriculum and Pedagogy Studies, language: English, abstract: The implementation of using calculators in the Irish Junior Certificate Mathematics curriculum and examinations brought about discussions about its impact on students' performance and learning attitudes. To compare the difference before and after implementation, we adopted experimental-type studies to find out the influence. There are two groups of Grade 9 students: the pre-intervention group and the post-intervention group. The research discovered that phase II students (using the calculators) got better Mathematics results and they thought using calculators can reduce the frequency of making mistakes. Despite such contribution, phase I students thought using calculators make students lazy. Based on our research, compulsory use of calculator in Mathematics education is a good decision, as it improved students' Mathematics performance and students became more motivated to learn. The most important reason of this is because students think using calculator can help them save more time.

#NotConsumed Kim Sorgius,2016-02-22 The truth is... life is full of trials that threaten to consume us. The little things. The big things. The kid things. The relationship things. Little by little we are consuming ourselves with these things and we don't even know it. In fact, we are too busy trying to make it look better (ya know- on social media) and pretending that our lives look like everyone else's to even notice the truth about it all.But our negligence doesn't change the facts. We are consumed. Burned out. Stressed out. Unhealthy. And most of all unhappy.Day after day we get back

on the hamster wheel chasing some perfect life that we are certain has to be out there. We keep pushing forward, doing more and more, and feeling disappointed that we can't seem to get there.But all of that is about to change. If you are willing to let it, that is. You see, there is a secret to not letting life consume you. There is a way to do it all and have it all. The trouble is, we are just a little confused about the definition of all. We need to do a little re-defining and a little truth-claiming if we are going to fix this. So what do you say? Are you ready to become #NOTCONSUMED?

Cases of Assessment in Mathematics Education M. Niss,2013-04-17 The present book, Cases of Assessment in Mathematics Education, is one of two studies resulting from an ICMI Study Conference on Assessment in Mathematics Education and Its Effects. The book which is published in the series of ICMI Studies under the general editorship of the President and Secretary of ICMI is closely related to another study resulting from the same conference: Investigations into Assessment in Mathematics Education (Niss, 1992). The two books, although originating from the same sources and having the same editor, emphasize different aspects of assessment in mathematics education and can be read independently of one another. While the present book is devoted to presenting and discussing cases of assessment that are actually implemented, the other study attempts to critically analyze general and principal aspects of assessment. Naturally, the content of either book is enriched by the materials and perspectives provided by the other one. In order to put this book and its background into context, the nature and scope of the ICMI studies are outlined briefly below.
