Whether you are a layperson or someone working within the various fields of finance itself, this is an indispensable reference book to have at your fingertips. It not only

defines the specific words and phrases but clearly explains the concepts behind them. In our current world of nanosecond trading, wildly fluctuating global markets and ever more 'creative' financial instruments, this essential volume belongs in everyone's library, virtual or otherwise! Martin Steiner Great Resource! What a great resource! I had actually been through a short sale, but never really understood the process until I read Mr Herold's book. This book is equally valuable to the experienced and the novice reader. I particularly appreciated the easy to use-

Example: What is Market Capitalization? Market capitalization refers to a company's total value. Analysts determine it by multiplying the number of shares in existence

times the price of the stock. This concept can also be utilized to measure the full value of a stock exchange. The New York Stock Exchange market capitalization would equal the value of all publicly traded companies on the exchange added together. Market cap is another name for market capitalization. Examples of how this is figured make it easier to understand. Companies that have 2 million shares which have been issued that sell for \$20 apiece have a market cap of \$40 million. If an investor had enough money and could get the stockholders to agree to sell their shares, he or she could purchase the company for \$40 million total. In practice many shareholders would want more than the current share price to sell their stock. There are three different main sizes of market capitalization among traded companies. These are large cap, mid cap, and small cap corporations. Large cap companies are generally considered the least risky ones in which to invest. They typically possess substantial financial resources to survive economic downturns. They are also generally leaders in their industries. This gives them a smaller amount of growth opportunity. Because of this the returns for these large cap companies are often not as spectacular as with successful companies in the other two categories. They also have a significantly greater chance of paying dividends out to their share holders. Large cap corporations have \$5 billion and higher capitalization. Mid cap companies are generally less risky than the smaller companies. They still do not have the same possibilities for aggressive growth. Mid cap

companies commonly possess market capitalization of from \$1 billion to \$5 billion. Studies have shown that mid caps have outperformed large cap and small cap corporation stocks in the past 20 years. Small cap corporations are those which possess under \$1 billion in market capitalization. These tinier companies have often completed an Initial Public Offering in the recent past. Such companies are considered the riskiest of the three types. This is because in economic downturns, they have the greatest chance of failing or defaulting. They also enjoy plenty of opportunity and space to expand. This means that they potentially could be extremely profitable if they succeed. Note: This example description is shorted due to publish restrictions. Each term is explained with 600 words and more.

Corporate Bonds? Corporate bonds are debt securities that a company issues and sells to investors. Such corporate bonds are generally backed by the company's ability to repay the loan. This money is anticipated to result from successful operations in the future time periods. With some corporate bonds, the physical assets of a company can be offered as bond collateral to ease investors' minds and any concerns about repayment. Corporate bonds are also known as debt financing. These bonds provide a significant capital source for a great number of businesses. Other sources of capital for the companies include lines of credit, bank loans, and equity issues like stock shares. For a business to be capable of achieving coupon rates that are favorable to them by issuing their debt to members of the public, a corporation will have to provide a series of consistent earnings reports and to show considerable earnings potential. As a general rule, the better a corporation's quality of credit is believed to be, the simpler it is for them to offer debt at lower rates and float greater amounts of such debt. Such corporate bonds are always issued in \$1,000 face value blocks. Practically all of them come with a standardized structure for coupon payments. Some corporate bonds include what is known as a call provision. These provisions permit the corporation that issues them to recall the bonds early if interest rates change significantly. Every call provision will be specific to the given bond. These types of corporate bonds are deemed to be of greater risk than are government issued bonds. Because of this

perceived additional risk, the interest rates almost always turn out to be higher with corporate bonds. This is true for companies whose credit is rated as among the best. Regarding tax issues of corporate bonds, these are pretty straight forward. The majority of corporate bonds prove to be taxable, assuming that their terms are for longer than a single year. To avoid taxes until the end, some bonds come with zero coupons and redemption values that are high, meaning that taxes are deferred as capital gains until the end of the bond term. Such corporate debts that come due in under a year are generally referred to as commercial paper. Corporate bonds are commonly listed on the major exchanges and ECN's like MarketAxess and Bonds.com. Even though these bonds are carried on the major exchanges, their trading does not mostly take place on them... Note: This example description is shorted due to publish restrictions. Each term is explained with 600 words and more.
