Marketing and Mobile Financial Services Aijaz A. Shaikh, Heikki Karjalainen, 2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer2peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.

Consumers and Mobile Financial Services 2016 Board of Governors of the Federal Reserve, 2016-07-18 Mobile phones have increasingly become tools that consumers use for banking, payments, budgeting, and shopping. Given the rapid pace of change in the area of mobile finance, the Federal Reserve Board began conducting annual surveys of consumers' use of mobile financial services in 2011. The series examines trends in the adoption and use of mobile banking, payments, and shopping behavior and how the evolution of mobile financial services affects consumers' interaction with financial institutions. This report presents findings from the latest survey, fielded in November 2015, which focused on consumers' use of mobile technology to access financial services and make financial decisions. Where applicable, the findings from the current survey are also compared with the findings from previous surveys. Topics include consumer access to bank services using mobile phones (mobile banking), consumer payment for goods and services using mobile phones (mobile payments), mobile security, and consumer financial management and shopping decisions facilitated by the use of mobile phones. Details about the survey, its methodology, and limitations can be found in the body of the report and in a methodological appendix.

Mobile Financial Services Silas Paulsen, 2013 Mobile phones have clearly become ubiquitous and a standard aspect of daily life for many American consumers in the last decade. Ongoing innovations in mobile finance show some potential to change the way consumers conduct financial transactions by offering consumers new services. Yet, many people remain sceptical of the benefit of mobile financial services and the level of security provided along with such services. This book examines the use of mobile technology to access financial services and make financial decisions, with a focus on how consumers are interacting with financial institutions;

current use of mobile banking and payments; and other mobile financial services and new technologies.
