Survival Training for the Neophyte Rudy Radillo,2021-12-03 This book is especially designed for the unprepared, to teach them how to survive any emergency. I refer to these individuals as neophytes. I hope to teach them how to handle a crisis and survive, whether or not they decide to stay at home or take their chances in the wild. It is written for those individuals who do not have the time to really prepare and practice the skills necessary to survive but have a strong desire to stay alive. This type of individuals usually gets their information to solve any problem through the internet. If you are one of this type of individuals, all you need is this book. You will be taught about basic survival skills, how to find or make shelter, how to purify water, how to build a fire, how to prepare your food, and many other things. Along with this book you need to put together a bugout pack (BOP). The BOP will allow you to survive three to five days, and even longer. An inexperienced individual will certainly die without this book and a fully loaded BOP. Your survival chances increase exponentially with these two items. I give you here the tools to make your survival possible and the knowledge to thrive.

Multi-Criteria Decision-Making Techniques for Improvement Sustainability Engineering Processes Edmundas Kazimieras Zavadskas,Dragan Pamučar,Željko Stević,Abbas Mardani,2020-12-15 The success of any activity and process depends fundamentally on the possibility of balancing (symmetry) needs and their satisfaction. That is, the ability to properly define a set of success indicators. The application of the developed new multi-criteria decision-making (MCDM) methods can be eliminated or decreased by decision-makers' subjectivity, which leads to consistency or symmetry in the weight values of the criteria. In this Special Issue, 40 research papers and one review study co-authored by 137 researchers from 23 different countries explore aspects of multi-criteria modeling and optimization in crisp or uncertain environments. The papers propose new approaches and elaborate case studies in the following areas of application: MCDM optimization in sustainable engineering, environmental sustainability in engineering processes, sustainable multi-criteria production and logistics processes planning, integrated approaches for modeling processes in engineering, new trends in the multi-criteria evaluation of sustainable processes, and multi-criteria decision-making in strategic management based on sustainable criteria.

Algorithmic Foundations of Robotics XII Ken Goldberg,Pieter Abbeel,Kostas Bekris,Lauren Miller,2020-05-06 This book presents the outcomes of the 12th International Workshop on the Algorithmic Foundations of Robotics (WAFR 2016). WAFR is a prestigious, single-track, biennial international meeting devoted to recent advances in algorithmic problems in robotics. Robot algorithms are an important building block of robotic systems and are used to process inputs from users and sensors, perceive and build models of the environment, plan low-level motions and high-level tasks, control robotic actuators, and coordinate actions across multiple systems. However, developing and analyzing these algorithms raises complex challenges, both theoretical and practical. Advances in the algorithmic foundations of robotics have applications to manufacturing, medicine, distributed robotics, human-robot interaction, intelligent prosthetics, computer animation, computational biology, and many other areas. The 2016 edition of WAFR went back to its roots and was held in San Francisco, California – the city where the very first WAFR was held in 1994. Organized by Pieter Abbeel, Kostas Bekris, Ken Goldberg, and Lauren Miller, WAFR 2016 featured keynote talks by John Canny on “A Guided Tour of Computer Vision, Robotics, Algebra, and HCI,” Erik Demaine on “Replicators, Transformers, and Robot Swarms: Science Fiction through Geometric Algorithms,” Dan Halperin on “From Piano Movers to Piano Printers: Computing and Using Minkowski Sums,” and by Lydia Kavradi on “20 Years of Sampling Robot Motion.” Furthermore, it included an Open Problems Session organized by Ron Alterovitz, Florian Pokorny, and Jur van den Berg. There were 58 paper presentations during the three-day event. The organizers would like to thank the authors for their work and contributions, the reviewers for ensuring the high quality of the meeting, the WAFR Steering Committee led by Nancy Amato as well as WAFR's fiscal sponsor, the International Federation of Robotics Research (IFRR), led by Oussama Khatib and Henrik Christensen. WAFR 2016 was an enjoyable and memorable event.
