Dynamic Economic Analysis Gerhard Sorger, 2015-02-12 Focusing on deterministic models in discrete time, this concise yet rigorous textbook provides a clear and systematic introduction to the theory and application of dynamic economic models. It guides students through the most popular model structures and solution concepts, from the simplest dynamic economic models through to complex problems of optimal policy design in dynamic general equilibrium frameworks. Chapters feature theorems and practical hints, and seventy-five worked examples highlight the various methods and results that can be applied in dynamic economic models. Notation and formulation is uniform throughout, so students can easily discern the similarities and differences between various model classes. Chapters include more than sixty exercises for students to self-test their analytical skills, and password-protected solutions are available for instructors on the companion website. Assuming no prior knowledge of dynamic economic analysis or dynamic optimization, this textbook is ideal for advanced students in economics.

Discourse Dynamics Sara Sanchez, 2010-09-13 This volume presents a reasoned study of the discourse connectives of attainment of the French language. For the most part, the studies on connectives are based on referentialist descriptive frameworks, which are sustained more or less explicitly on what we have called the general problem of causality, the epistemological foundation of a scientific paradigm which has been used for centuries but which, in our opinion, is now outdated. In the first place, we have submitted this old paradigm to critical debate, showing the limits of its scientific validity. Next, we have placed ourselves in a non-referentialist linguistic framework, the Theory of Argumentation in the Language-System, developed by the French linguist Oswald Ducrot, in which we have formulated a new descriptive proposal for discourse connectives, taking into account both the argumentative configuration and the polyphonic configuration of each of the discourse dynamics generated around a given connective. We have described the argumentative configuration in terms of semantic blocks, and the polyphonic configuration in terms of discourse algorithms, original and innovative heuristic instruments with which we attempt to stimulate a new approach to language more in line with the general scientific approaches of the 21st century, and with the new scientific paradigm which is currently valid.

Economic Dynamics, Trade and Growth A.P. Thirlwall, Giorgio Rampa, Luciano Stella, 2015-12-31 Sir Roy Harrod was one of the foremost economists of the twentieth century who made pioneering contributions in several branches of economics including: trade cycle theory; growth theory; trade theory; monetary economics; imperfect competition theory, and methodology. This volume arises out of a conference to celebrate the sixtieth anniversary of the publication of his book *The Trade Cycle* in 1936. After an introductory essay by Walter Eltis, a student of Harrod, this volume contains important essays on the interpretation of Harrod's work in the field of economic dynamics by Danial Besomi and Maurizio Pugno, and in the field of trade and growth by Tony Thirlwall, John McCombie and Luca Bendictis. Finally, Warren Young, in the process of writing Harrod's biography, uses correspondence between Harrod and Haberler to elucidate Harrod's views on trade theory, international monetary reform and inflation.

Practical details of machine design are included to motivate the non-mathematically inclined student.

Socio-Political Dynamics S.C. Ghose, 1996 Multi-dimensional and dynamic, every society is being ceaselessly plagued by a number of socio-political problems. Delineations of these problems have manifested themselves in the shape of articles of different taste, tone and tenor under five broad divisions such as education, youth, politics, society and health (of the body and mind of an individual). This book thus turns out to be a conglomeration of a total of forty articles plus a lengthy introduction which sums up the articles in order to induce the readers to browse over them, one by one, in an effort to acquaint themselves with the variegated problems that are eroding into the vitals of our society.

Dynamics of Class and Stratification in Poland - 1945-2015 Irina Tomescu-Dubrow, Kazimierz M. Słomczynski, Henryk Domanski, Joshua

Kjerulf Dubrow,Zbigniew Sawinski, Dariusz Przybysz ,2018-04-01 This book is about long-term changes to class and inequality in Poland. Drawing upon major social surveys, the team of authors from the Polish Academy of Sciences offer the rare comprehensive study of important changes to the social structure from the communist era to the present. The core argument is that, even during extreme societal transformations, key features of social life have long-lasting, stratifying effects. The authors analyse the core issues of inequality research that best explain “who gets what and why:” social mobility, status attainment and their mechanisms, with a focus on education, occupation, and income. The transition from communist political economy to liberal democracy and market capitalism offers a unique opportunity for scholars to understand how people move from one stratifi cation regime to the next. There are valuable lessons to be learned from linking past to present. Classic issues of class, stratification, mobility, and attainment have endured decades of radical social change. These concepts remain valid even when society tries to eradicate them.

Dynamics Behind Persistent Images of "the Other" Vanessa Wijngaarden,2016 In tourism, strangers meet face to face. What do Tanzanian Maasai and Western tourists think when they meet? Using a combination of methods that has never been tried in anthropology, or in the field of tourism studies, this work provides novel theoretical insights into the images hosts and guests have of each other, and how their views relate to the interactions they experience. This compelling reflexive study uses video and Q method to contribute to the epistemology of anthropological research in tourism settings, and the construction of a new, more symmetrical anthropology. Dissertation. ***An important contribution to the growing field of the anthropology of tourism, an example of intense and methodical fieldwork, combined with theoretical acumen and deep reflexivity.--Prof. Dr Walter E. A. van Beek (Tilburg U.) (Series: Contributions to African Research / BeitrÃ?Ânge zur Afrikaforschung, Vol. 76) [Subject: African Studies, Tourism Studies, Anthropology, Sociology]

The Institutional Dynamics of Culture, Volumes I and II Perri Six,2018-12-20 These two volumes present the most important recent developments in the institutional theory of culture and demonstrate their practical applications. Sometimes called 'grid-group analysis' or 'cultural theory', they derive from the work of Durkheim in the 1880s and 1900s and develop the insights of the anthropologist Mary Douglas and her followers from the 1960s on. First redefined within social and cultural anthropology, the theory's influence is shown in recent years to have permeated all the main disciplines of social science with substantial implications for politics, history, business, work and organizations, the environment, technology and risk, and crime and consumption. Today, the institutional theory of culture now rivals the rational choice, Weberian and postmodern outlooks in influence across the social sciences.
