Splinting in Hand Therapy Erik Moberg, Carl-Göran Hagert, 1984

Hand and finger injuries Sics Editore, 2014-10-01 Fractures and dislocations of the hand and fingers are common injuries. Conservative treatment is sufficient in most cases. Reduction and application of a cast comprise the first-line treatment also in dislocated fractures because complications are more frequent with surgical treatment. The appropriate mode of treatment can thus not be decided on the basis of the primary x-ray findings alone, before reduction is performed. The position of immobilization is crucial for the maximum restoration of function in the hand: interphalangeal (IP) joints are immobilized in a straight position and metacarpophalangeal (MCP) joints in a flexion of 70-90°. A mallet finger may be caused by an injury or may be of degenerative origin. It requires long, continuous splinting.

*Hand Splinting / Orthotic Intervention* Judith Wilton, 2014-11-01 Hand splinting/orthotic fabrication is a vital intervention used by occupational and physiotherapists to restore optimum hand function in patients/clients whose upper limbs have been affected by congenital conditions, disease or trauma. This practical book, designed for therapists and students approaches hand splinting/orthotic fabrication from the perspective of the purpose of the intervention. Detailed information describes how orthoses can immobilize tissues to achieve healing or functional objectives, mobilize tissues to restore joint motion, and restrict tissues to gain function. Armed with knowledge of orthosis function and purpose, and practical procedures and techniques, hand and upper limb therapists will be able to fabricate orthoses for a wide range of diagnoses. Features of this book include: - Over 150 illustrations of orthoses and patterns. - Comprehensive index listing orthoses by region/joint and purpose of intervention - immobilization,

mobilization, restriction and torque transmission. - Elbow, forearm, wrist, finger and thumb chapters with a consistent easy to follow approach to orthotic intervention options, highlighting anatomical principles and latest literature. - Biomechanical, technical and practical information essential to design and fabrication of upper limb orthoses. - Emphasis on clinical reasoning and patient/client contribution in orthotic intervention. - Detailed illustrations and pattern descriptions of all orthoses. - Step by step instructions for orthosis fabrication. - Specific chapter on orthotic and casting interventions for neurological dysfunction addressing current literature, classification of hand deformity and dysfunction, and intervention options. - Use of nomenclature consistent with the Australian Hand Therapy Association Splint/Orthosis Classification.

This comprehensive text is the perfect resource for use in the classroom, during labs, and in clinical practice for both occupational and physical therapists. Additionally, it is a great reference for those studying to become a Certified Hand Therapist (CHT). *Orthotic Intervention for the Hand and Upper Extremity: Splinting Principles and Process* superbly highlights anatomical and mechanical principles; discusses associated indications and precautions; and promotes clinical reasoning skills by presenting various patient examples, therefore allowing you to confidently utilize techniques in clinical practice. This updated third edition is divided into the following sections: fundamentals necessary for

successful orthotic fabrication, additional intervention methods, and orthoses for specific diagnoses and patient populations. Now with a larger format for more generous pattern appreciation, as well as incorporated and revised evidence-based content from an expanded list of contributing authors, it remains the go-to resource for every level of usage.

**Fingertip Injuries** Leo M. Rozmaryn, 2015-04-06 Focusing exclusively on the various categories of injury to the fingertip – the most common orthopedic injury seen in the ER – this book covers anatomy, physiology, mechanisms of injury, treatment options and outcomes, and possible complications stemming from these treatments. Management strategies discussed in this book range from simple splinting to complex microvascular reconstruction, open reduction internal fixation (ORIF), complex nail reconstruction, decompression of high pressure injection injuries, local and regional flap reconstructions, and free tissue transfers for fingertip coverage. Additional topics include the management of fingertip burns (thermal, chemical and electrical, and frostbite) as well as special considerations in pediatric fingertip injuries and rehabilitation strategies.
