ASD Calculator Basics Suzanne Goh, Marion Blank, 2015-02-08 High-tech devices have incredible potential for enhancing the learning of children with Autism Spectrum Disorders (ASD). In the world of computers, tablets, and smart phones, however, one device has received little attention: it is the calculator. Compared to newer devices, this instrument may seem nearly obsolete. However, mastery of the calculator has the potential to enrich a child's life both in school and in the community. For example, in school, use of the calculator can aid a child in solving the math word problems offered in the curriculum. With these skills, many of the children can go on to enter mainstream math classes. In the community, mastery of the calculator can enable a child to be proficient in important daily life skills such as shopping (e.g., keeping track of the price of purchases, selecting items to fit available funds, and calculating the change expected from a cashier). Such skills play a key role in achieving independence in daily life. This program aims to teach children how to recognize, use, and understand the buttons on a calculator. It contains five levels. The first level teaches the child to handle single numbers. Each level becomes progressively more complex so that by Level 5, the children can work with three digit numbers as well as symbols on the calculator such as plus (+), minus (-), and equals (=). Upon completion of this program, the child is ready to move on to applying these new skills to math problems. This program may be implemented by a parent, teacher, therapist, or other adult.

Children Learn Mathematics , 2008-01-01 Improving the quality of education is an important endeavor of educational policy and TAL aims to contribute to this. TAL is a project initiated by the Dutch Ministry of Education, Culture and Sciences, and carried out by the Freudenthal Institute (FI) of Utrecht University and the Dutch National Institute for Curriculum Development (SLO), in collaboration with the Rotterdam Center for Educational Services (CED). The quality of education can be improved in many ways. TAL proposes to do this by providing insights into the broad outline of the learning-teaching process and its internal coherence. It aims to be a support for teachers alongside mathematics textbook series. Furthermore, TAL can provide extra support for teachers if it is incorporated into a circle of implementation.
