**Marian Elizabeth Binkley**

Fishing for Answers Yumkio Kura, Yumiko Kura, Carmen Revenga, Eriko Hoshino, Greg Mock, 2004 Allows consumers make links between what they eat and the effect on the ecosystem and fishers globally. Stimulates dialogues among environmentalists, fishing industry, consumers.

**Food From The Sea** Frederick W. Bell, 2019-04-23 Although the United States and other affluent nations have more than an adequate food supply, other nations daily face the specter of starvation. The world now has a critical population/food dilemma of potentially major proportions. Production from the sea and the land is not keeping pace with a world population that is doubling every thirty-five years. Unless this age-old Malthusian problem is solved, millions face starvation and ultimately death. The situation has stimulated substantial international interest in the sea as a source of food and raw materials. The potential of the sea—not as a panacea, but as an important source of protein to augment the world's food supplies and thereby as a means of mitigating the crises we face—is a continuing theme throughout this book. At present, fish provide approximately 9 percent of the world's protein. Fish are sought not only for food but also for recreation and pleasure. What forces determine the present supply and demand for fishery products? More important, what steps are needed to utilize the full potential of the sea as a source of food and recreation? This book explores these forces and thus provides an insight into food potential from the sea.

*Japan's International Fisheries Policy* Roger D. Smith, 2014-09-19 Few nations rely upon the ocean as much as Japan for livelihood, culture and transport. The seas have long played a vital role for the Japanese, helping to support the economic and social life of a nation that possesses few resources and little arable land, and sustain a population that has nearly tripled in the last century. Fish are a distinctive feature of the Japanese diet, constituting nearly half of all animal protein

consumed – the highest rate in the world. The industry itself has provided an impetus for coastal community growth and national economic development over the past century, while fisheries have worked their way into Japanese culture and customs, serving as a dominant symbol in traditional arts and folklore. This book explores the overarching rationale that motivated Japanese international fisheries policy throughout the post-war period until today, highlighting the importance of international fisheries to Japan and the stature this resource has occupied as a national interest. It provides a comparative view of Japanese foreign policy at various ocean conferences, treaty negotiations, bilateral diplomatic initiatives and other maritime relations that constitute ocean policy over half a century, and investigates the domestic constituents of national policy. Roger Smith argues that the rationale for international fisheries policy may be best viewed as deriving from Japan's unique defence strategy for its national interests: comprehensive security. Encompassing non-military elements and most importantly defence of economic interests, Japan's international fisheries policy provides an interesting case study of how comprehensive security is conceptualised and carried out. Taking a broad view of Japan's international fisheries policies from 1945 to the present, this book highlights the key trends in policy motives and means throughout the post-war period. As such, it will be of great interest to students and scholars of Japanese studies, international and environmental law, resource management and international relations, as well as to policy makers working in the field.

**Enforcing the Common Fisheries Policy** Ronán J.

Long, Peter A. Curran, 2008-04-30 The main focus of this book is a review of how the Common Fisheries Policy is enforced throughout the Community, with a discussion of its successes and failures. Topics include the various rules and policies to be enforced; the enforcement authorities in the Member States and their activities and strategies; the role of the Commission and its

approach to enforcement; new developments in fisheries control; the costs of enforcement; and problem fisheries and non compliance generally.

Animal Industries Taina Syrjämaa, Marja Jalava, Taija Kaarlenkaski, Otto Latva, Eeva Nikkilä, Tuomas Räsänen, 2024-04  
This book examines an extremely topical phenomenon, the massive industrial exploitation of animals, from a previously neglected perspective. It explores the history and development of animal industries in Nordic countries from their establishment in the late nineteenth century to the present day. These countries are often considered to be progressive and advanced in animal protection, but consumption practices in this area are actually excessive in relation to planetary resources and are among the most unsustainable on a global scale. If we want to understand current problems, it is essential to be aware of long-term changes and continuities, as well as the diversity of animals that have been exploited. The purpose of this book is to explain these changes and provide new knowledge for scholars in human-animal studies, decisionmakers and the general public.

East Asia Imperilled Alan Dupont, 2001-10-15  
Security issues have traditionally been defined in military terms, yet the post-Cold War security landscape contains numerous non-military challenges to security. In this 2001 analysis, Alan Dupont argues that an emerging new class of non-military threats has the potential to destabilize East Asia and reverse decades of hard-won economic and social development. He shows that these transnational shifts must be grasped and dealt with by governments and non-government organizations both regionally, and internationally, if conflict is to be avoided. Transnational threats stem from overpopulation, deforestation and pollution, global warming, unregulated population movements, transnational crime, virulent new strains of infectious diseases and other issues not previously associated with international security. Collectively they represent a new agenda and pose novel

challenges for foreign and defence policy. This highly informative, compelling and authoritative book is essential reading for East Asia specialists and makes a significant contribution to international security debates.

**Vanishing Fish** Daniel Pauly, 2019-05-28 Daniel Pauly is a friend whose work has inspired me for years. —Ted Danson, actor, ocean activist, and co-author of *Oceana* This wonderfully personal and accessible book by the world's greatest living fisheries biologist summarizes and expands on the causes of collapse and the essential actions that will be required to rebuild fish stocks for future generations." —Dr. Jeremy Jackson, ocean scientist and author of *Breakpoint* The world's fisheries are in crisis. Their catches are declining, and the stocks of key species, such as cod and bluefin tuna, are but a small fraction of their previous abundance, while others have been overfished almost to extinction. The oceans are depleted and the commercial fishing industry increasingly depends on subsidies to remain afloat. In these essays, award-winning biologist Dr. Daniel Pauly offers a thought-provoking look at the state of today's global fisheries—and a radical way to turn it around. Starting with the rapid expansion that followed World War II, he traces the arc of the fishing industry's ensuing demise, offering insights into how and why it has failed. With clear, convincing prose, Dr. Pauly draws on decades of research to provide an up-to-date assessment of ocean health and an analysis of the issues that have contributed to the current crisis, including globalization, massive underreporting of catch, and the phenomenon of "shifting baselines," in which, over time, important knowledge is lost about the state of the natural world. Finally, *Vanishing Fish* provides practical recommendations for a way forward—a vision of a vibrant future where small-scale fisheries can supply the majority of the world's fish. *Fisheries, Quota Management and Quota Transfer* Gordon M.

Winder,2017-07-11 This volume examines the impact of fish stock assessment and catch share arrangements in context through case studies and in terms of ecosystem, economy and society. It examines the rationalizing work of bio-economic projects, especially the institutionalization of individual transferable quota (ITQ) in fisheries: what impact have they had on fisheries and fishers? The contributing authors understand ITQ and quota management as bio-economic projects, that is, as widely deployed but locally constituted projects that combine biological and economic logics to rationalize production and, in this case, fish. Politicians and managers use these projects and the models that justify them to rationalize fisheries in favor of modern technology and for capital and species efficiency. Aimed at a diverse interdisciplinary fisheries management readership, and designed as a guide to issues emerging in any assessment of ITQ, the book is a timely investigation of the origins and diverse experiences of ITQ projects, including resistance to them, attempts to develop fisheries management around them, and experiences of the risks that come with them. Now around forty years old, ITQ has never been subject to the kind of comprehensive sustainability assessments once advocated by Elinor Ostrom, let alone the full-cost accounting of impacts at the national level that Evelyn Pinkerton recently called for. *Fisheries, Quota Management and Quota Transfer* offers multi-disciplinary assessments of the effects of ITQ from scholars working in eight countries. The book brings together scholars from anthropology, economics, geography, sociology, the history of science, and marine environmental history to discuss experiences from fisheries in eight industrialized countries. It considers cases from outside as well as inside the EU, including ITQ pioneers, New Zealand and Iceland. The combination allows for an unprecedented international perspective on stock assessments and share allocation systems. By emphasizing emerging, becoming, learning and transforming through knowledge, the book conceives technology as a field of

power and choice, nevertheless dominated by managers through specific projects in specific contexts. Individual chapters relate bio-economic projects to separate theoretical literature, an approach that facilitates multi-disciplinary dialog.

**Financial Crises, Poverty and Environmental Sustainability: Challenges in the Context of the SDGs and Covid-19 Recovery** Andreas Antoniadou, Alexander S.

Antonarakis, Isabell Kempf, 2022-01-03 This volume advances the state-of-the-art in the study of the interplay among financial crises, poverty dynamics and environmental sustainability. It offers timely and unique contributions to the immediate global challenge of sustainable development. Developing a new evidence-base, the volume offers concrete recommendations for policy action needed in advancing the Sustainable Development Goals (SDGs) in relation to environment and poverty during the current conditions of financial distress. The approach taken is inductive and evidence-driven. Most analysis is based on in-depth case studies that aim to offer a detailed and dynamic picture on how poverty and environmental sustainability interact in specific social contexts and financial crises. In this way the volume aims to generate a wealth of new and concrete evidence that offer a solid foundation to understand the multiple channels through which social and environmental factors interact, and the ways in which this interaction can and should be managed in order to achieve the needed global transition to sustainability. Broader dynamics that are covered and analysed include the historical legacies of structural adjustment and colonialism; the current debt wave experienced in developing countries; the role of inequality; the significant impact that climate change has on livelihoods and on meeting the SDGs; the new challenge presented by the Covid-19 pandemic for the SDGs; the challenge of sustainable funding for SDGs; and the need for a new eco-social contract. Case-studies examined include Cambodia, Ethiopia, India, Indonesia, Zambia, and subregions such as the

Caribbean, sub-Saharan Africa and Lower Mekong Countries. The volume is part of a joint initiative by the 'Sussex Sustainability Research Programme (SSRP)' of the University of Sussex, the 'UNDP-UNEP Poverty-Environment Action for Sustainable Development Goals' and the 'United Nations Research Institute for Social Development (UNRISD)'. The overall aim is to advance a new research programme and foster a better understanding of the multiple, complex and often opposing ways through which the punctuated economic slowdown of financial crises, poverty dynamics and environmental sustainability interact. It also makes novel recommendations into how poverty reduction and environment can work in synergy rather than being antagonistic, especially during financial distress, leading into recommendations directly geared towards achieving the SDGs and beyond.

*Global Governance, Legitimacy and Legitimation* Magdalena Bexell, 2017-10-02 Rules set by global governance organizations affect communities across the world. Such organizations increasingly seek to obtain legitimacy in the eyes of groups beyond their member state elites. This book advances scholarly debate on the politics of legitimacy and legitimation in global governance. It brings together researchers from different subfields of International Relations in order to highlight trends and contradictions in the contemporary politics of legitimacy across areas of sustainable development, humanitarian relief, responsible investment, sustainable fisheries and labour standards. The chapters explore legitimation efforts by various forms of global governance bodies, such as intergovernmental organizations, public-private partnerships and fully private bodies. The book demonstrates that different governance forms beyond the nation state share deep legitimacy challenges and engage in continuous legitimation attempts. Questions on the audiences of such legitimation attempts are particularly pivotal in understanding the politics of legitimacy. Audiences are not predetermined but constituted through interaction between

legitimation efforts and the reactions to those of targeted and other groups, mirroring broader global power relations. This book was published as a special issue of Globalizations.

**Set Adrift** Marian Elizabeth Binkley, 2002-01-01 Comparing and contrasting the households of deep-sea and coastal fishers, Binkley illustrates the daily dependence of husbands upon their wives' labour and ability to adapt to often difficult and precarious living conditions.

**Fish** Elizabeth R. DeSombre, J. Samuel Barkin, 2013-04-25 Fishing has played a vital role in human history and culture. But today this key resource faces a serious crisis as most species are being overfished or fished to their very limit. Governments have tried to tackle the problem with limited success. Many of their actions have been counterproductive or ineffective. What will happen to global fisheries, and the populations that depend on them, as we continue to catch more fish than the oceans can reproduce? This book explores the causes of the current crisis in the world's fisheries, and what needs to be done to address the situation. It explains the structure of the fishing industry, the incentives that persuade individuals or companies to catch fish at unsustainable levels, and illuminates the problems created by governmental efforts to use fishing policy as a tool for economic development or to win votes in domestic elections. It also looks at the role of aquaculture in either decreasing or increasing the pressure on wild fish stocks. The dire condition of fish stocks has led governments and consumer organizations to consider new approaches to protect the global supply of fish. DeSombre and Barkin conclude by showing how such methods, along with new forms of international regulation and informed decision-making by consumers, all have an important part to play in rewarding and thus encouraging sustainable fishing behaviour in the future.

The Use of CITES for Commercially-exploited Fish Species Solène Guggisberg, 2015-12-11 This book examines the legality, adequacy and efficacy of using the Convention on International

Trade in Endangered Species of Wild Fauna and Flora (CITES) for commercially-exploited fish species and assesses whether the existing institutional cooperation with the Food and Agriculture Organization (FAO) and regional fisheries management organizations (RFMOs) is efficient. This case-study also provides an interesting lens to approaching wider international law issues. Indeed, finding ways to achieve effective governance of transboundary or global natural resources is central to the peaceful use of oceans and land. Furthermore, the role of science in advising decision-makers is a sensitive issue, which deserves scrutiny and is similar in many regimes. Finally, the complex problem of fragmentation of international law is acute in various fields of environmental law, as in all rapidly developing areas of international regulations.

**Daily Report, West Europe ,1995**

*An Enormous, Immensely Complicated Intervention* Spencer Apollonio, Jacob J. Dykstra, 2008-08 This book reviews the fisheries of New England - the poster child of mismanagement - since 1977. It finds that many of the explanations offered for the New England problems are incorrect or irrelevant or counterproductive. It suggests that the problems lie in two general categories: first, the legislative and administrative context of management; and second and more serious, fundamental issues concerning fishing technologies, and lack of effective effort control strategies and an operational hypothesis of the dynamics of marine ecosystems. These latter issues are not confined to New England, but are inherent in most marine fisheries wherever they may be found. The book suggests a new concept for benign and selective fishing technologies, and it recommends a thorough review and analysis of the efficacy of effort control concepts. It proposes a management strategy based upon the hierarchical concept of ecosystems that could eliminate many of the current problems of management.

*Global Governance of Food Production and Consumption*

Peter Oosterveer, 2007 The analysis includes case-studies on the European BSE crisis, GM-food regulation, salmon and shrimp farming and food labelling.

The Oyster Question Christine Keiner, 2010 In *The Oyster Question*, Christine Keiner applies perspectives of environmental, agricultural, political, and social history to examine the decline of Maryland's iconic Chesapeake Bay oyster industry. Oystermen have held on to traditional ways of life, and some continue to use preindustrial methods, tonging oysters by hand from small boats. Others use more intensive tools, and thus it is commonly believed that a lack of regulation enabled oystermen to exploit the bay to the point of ruin. But Keiner offers an opposing view in which state officials, scientists, and oystermen created a regulated commons that sustained tidewater communities for decades. Not until the 1980s did a confluence of natural and unnatural disasters weaken the bay's resilience enough to endanger the oyster resource. Keiner examines conflicts that pitted scientists in favor of privatization against watermen who used their power in the statehouse to stave off the forces of rural change. Her study breaks new ground regarding the evolution of environmental politics at the state rather than the federal level. *The Oyster Question* concludes with the impassioned ongoing debate over introducing nonnative oysters to the Chesapeake Bay and how that proposal might affect the struggling watermen and their identity as the last hunter-gatherers of the industrialized world.

**5 Easy Pieces** Daniel Pauly, 2010-07-28 *5 Easy Pieces* features five contributions, originally published in *Nature* and *Science*, demonstrating the massive impacts of modern industrial fisheries on marine ecosystems. Initially published over an eight-year period, from 1995 to 2003, these articles illustrate a transition in scientific thought—from the initially-contested realization that the crisis of fisheries and their underlying ocean ecosystems was, in fact, global to its broad acceptance by mainstream scientific and public opinion. Daniel Pauly, a well-

known fisheries expert who was a co-author of all five articles, presents each original article here and surrounds it with a rich array of contemporary comments, many of which led Pauly and his colleagues to further study. In addition, Pauly documents how popular media reported on the articles and their findings. By doing so, he demonstrates how science evolves. In one chapter, for example, the popular media pick up a contribution and use Pauly's conclusions to contextualize current political disputes; in another, what might be seen as nitpicking by fellow scientists leads Pauly and his colleagues to strengthen their case that commercial fishing is endangering the global marine ecosystem. This structure also allows readers to see how scientists' interactions with the popular media can shape the reception of their own, sometimes controversial, scientific studies. In an epilog, Pauly reflects on the ways that scientific consensus emerges from discussions both within and outside the scientific community.

**The Last of the Hunter Gatherers** Michael Wigan, 1998  
Focuses on the world's major fishing countries and their responses to diminishing catches.

**Overrun** Andrew Reeves, 2019-03-12  
Intelligent investigative writing meets experiential journalism in this important look at one of North America's most voraciously invasive species. Politicians, ecologists, and government wildlife officials are fighting a desperate rearguard action to halt the onward reach of Asian Carp, four troublesome fish now within a handful of miles from entering Lake Michigan. From aquaculture farms in Arkansas to the bayous of Louisiana; from marshlands in Indiana to labs in Minnesota; and from the Illinois River to the streets of Chicago where the last line of defense has been laid to keep Asian carp from reaching the Great Lakes, *Overrun* takes us on a firsthand journey into the heart of a crisis. Along the way, environmental journalist Andrew Reeves discovers that saving the Great Lakes is only half the challenge. The other is a radical

scientific and political shift to rethink how we can bring back our degraded and ignored rivers and waterways and reconsider how we create equilibrium in a shrinking world. With writing that is both urgent and wildly entertaining, Andrew Reeves traces the carp's explosive spread throughout North America from an unknown import meant to tackle invasive water weeds to a continental scourge that bulldozes through everything in its path.
