Smartphones from an Applied Research Perspective Nawaz Mohamudally,2017-11-02 Smartphones from an Applied Research Perspective highlights latest advancements of research undertaken in multidisciplinary fields where the smartphone plays a central role. Smartphone is synonymous to innovation in today's society. Very few visionaries predicted its social, cultural, technological and economic impacts, although the usage of smartphone is almost pervasive and transcendental. This book is meant for researchers and postgraduate students looking forward for hot topics for their final year projects, doctoral or even postdoctoral studies. Practitioners too will find food for thought and will surely be amazed by the broadness of the topics presented.

Software Architecture in Practice Len Bass,Paul Clements,Rick Kazman,2003 This is the eagerly-anticipated revision to one of the seminal books in the field of software architecture which clearly defines and explains the topic.

New Israeli Horror Olga Gershenson,2023-11-10 Before 2010, there were no Israeli horror films. Then distinctly Israeli serial killers, zombies, vampires, and ghosts invaded local screens. The next decade saw a blossoming of the genre by young Israeli filmmakers. New Israeli Horror is the first book to tell their story. Through in-depth analysis, engaging storytelling, and interviews with the filmmakers, Olga Gershenson explores their films from inception to reception. She shows how these films challenge traditional representations of Israel and its people, while also appealing to audiences around the world. Gershenson introduces an innovative conceptual framework of adaptation, which explains how filmmakers adapt global genre tropes to local reality. It illuminates the ways in which Israeli horror borrows and diverges from its international models. New Israeli Horror offers an exciting and original contribution to our understanding of both Israeli cinema and the horror genre. A companion website

Robotics, Vision and Control Peter Corke,Witold Jachimczyk,Remo Pillat,2023-06-16 This textbook provides a comprehensive, but tutorial, introduction to robotics, computer vision, and control. It is written in a light but informative conversational style, weaving text, figures, mathematics, and lines of code into a cohesive narrative. Over 1600 code examples show how complex problems can be decomposed and solved using just a few simple lines of code. This edition is based on MATLAB® and a number of MathWorks® toolboxes. These provide a set of supported software tools for addressing a broad range of applications in robotics and computer vision. These toolboxes enable the reader to easily bring the algorithmic concepts into practice and work with real, non-trivial, problems. For the beginning student, the book makes the algorithms accessible, the toolbox code can be read to gain understanding, and the examples illustrate how it can be used. The code can also be the

starting point for new work, for practitioners, students, or researchers, by writing programs based on toolbox functions. Two co-authors from MathWorks have joined the writing team and bring deep knowledge of these MATLAB toolboxes and workflows.

People and Computers XI Angela Sasse,Jim Cunningham,Russel Winder,2013-04-17 Disciplines, including Human-Computer Interaction (HCI), consist of knowledge supporting practices which solve general problems (Long & Dowell, 1989). A disci pline thus requires knowledge to be acquired which can be applied by practitioners to solve problems within the scope of the discipline. In the case of HCI, such knowledge is being acquired through research and, less formally, through the description of successful system development practice. Some have argued that knowledge is further embodied in the artefacts. HCI knowledge is applied to solve user interface design problems. Such applica tion is facilitated if the knowledge is expressed in a conception which makes explicit the design problems of practitioners. A conception has been proposed by Dowell & Long (1989). The conception provides a framework within which to reason about the implications of designs for system performance. The framework is concordant with the trend towards design, discernible in recent HCI research. It is further compatible with notions of top-down design, fundamental to software engineering practice. 2 Teaching and the HeI Research and Development Gap 2.1 An Assessment of Current HCI Education Teaching is one means by which practitioners learn to specify discipline problems. It is also a means by which they acquire knowledge to enable the problems to be solved.
