Non-volcanic Rifting of Continental Margins Geological Society of London,2001 Non-continental margins lack thick lavas that are generated as continental crust thins immediately prior to the onset of seafloor spreading. They may form up to 30 per cent of passive margins around the world. This volume contains papers examining an active margin, fossil margins that border present day oceans, and remnants of margins exposed

today in the Alps. The papers present evidence across a range of scales, from individual mineral grains, through borehole cores and outcrop, to whole margins at the crustal scale.
