Flash Video Creativity Murat Bodur, Hoss Gifford, Diana Johnson, Leonhard Lass, Anthony Onumonu, Kristian Besley, Neal Boyd, Jerome Turner, Ken Jokol, Tim Hawkins, 2013-11-21 by Bruce Herbert and Diana Johnson of Sorenson Media Creative boundaries are being blown apart as Macromedia Flash MX ushers in a new era of moving images on the Internet. At its launch, analysts predicted that the Flash Player would transform itself from being a lightweight animation tool to the de facto technology for simple web interactivity⁵ (Randy Souza, Forrester). Since then though, Flash developers

combining vector animation and video have proven that it's capable of much, much more than simple web interactivity. We're still just beginning to scratch the surface of the possibilities it opens up to us, but already it looks like Flash MX is becoming the key technology for pushing video creativity on the Web to a new whole level. Understandably, many people look at Flash as just another way to deliver video on the Web, one more program for showing movies on your desktop. Well, it can certainly do that - but there's a whole lot more it can do besides! You can use ActionScript to add custom controls, determine a video playback sequence, or mask your video with a custom shape. You can use layering to create special effects, design custom templates for e-learning applications, and use lightweight video streams along with Flash animation in rich media e-mail campaigns.

Flash .NET Gerald YardFace,David Neal,Pallav Nadhani,Graeme Bull,Chris Bizzell,2013-12-14 The absolute cutting edge for application development at the moment is using Macromedia's Flash MX (the premier software for designing fantastic looking interfaces) with Microsoft's .NET framework (tremendously powerful server-side technology). Combining these technologies has been greatly aided by the release of Macromedia's Flash Remoting MX, which is covered fully in this book. Designers and developers involved in the creation of this technology impart their knowledge to you in this book through extensive case studies. Flash Remoting is not the only way to combine these technologies, however, so this book will fully cover Flash/.NET integration using ASP.NET. This book is for readers who are looking to integrate their Flash movies with a .NET-enabled back-end. It assumes no prior knowledge of server-side technologies, but does require knowledge of Flash MX and ActionScript.

RICH MEDIA STU, Kristian Besley, Sham Bhargal, Murat Bodur, Kevyn Smith, Mike Tucker, Paul Logan, Tania Aleo, Martin Dahlhauser, Fred Fauquette, Doug McDermott, Keran McKenzie, Alex Ogle, Mark Welland, Jorge Diogo, Robin Mackay, Alex MacLeod, 2001-09-24 With its low bandwidth and tiny file sizes, it is often wrongly assumed that sound and video can never achieve a really high level of sophistication in Flash animations. With competitive motion graphics techniques rapidly evolving, there is a constantly growing demand for the next stage in sophisticated design—video and sound. This book will do exactly what they said wasn't possible by illustrating how video and sound can be integrated into your Flash presentations, placing you at the extreme edge of creative web design. The application of such tools as AfterEffects, QuickTime, SoundForge and Wildform test the boundaries of Flash and suggest ways to take sound and video beyond Flash and into the realm of Shockwave. Showing you how to break your site down and incorporate video and sound, the techniques covered in this book capitalise on the capabilities of Flash, whilst tackling its limitations head-on. It will then look at how to take web video and sound a step further with Shockwave presentations. What you'll learn Who this book is for All Flash designers who appreciate the need to use sound and video in order to stay ahead in the motion web graphics sector. Readers of other friends of ED Flash Studio titles who want to take the next step towards becoming New Masters.

standard for web motion graphics and has been welcomed with open arms on account of its powerful new ActionScripting capabilities. Following the phenomenal success of *New Masters of Flash*, the *Flash Annual* will bring together a new collection of the hottest Flash design talents on the planet, all of whom have grabbed attention in the preceding year. *New Masters of Flash: The 2002 Annual* gives competent web artists inspiration for cutting-edge Flash design techniques, as well as hard tutorial information on how to build top class effects. The format builds on the best of the original best-selling title while improving in areas where the first volume was weaker, (e.g. generic customizable code examples), while the talents, the inspirations and effects are all of the moment and represent the mature and expert deployment of the staggering new capabilities of Flash 5 ActionScript. The *Flash Annual* format: The Intro is a series of 3 field-report essays written by key *New Masters* from the previous year covering new talents, new techniques and new trends. The main body of the book is then an evolution from the original format. This time, as well as the inspiration and tutorial sections, we add a third section to each chapter, headnotes. Part summary, part chapter commentary, part code overview, the Headnotes section teases out the reusable and generic elements of the previous tutorial and suggests ways forward for the reader.
