**The AMX 13 Light Tank** M.P. Robinson,Peter Lau,Guy Gibeau,2017-09-30 The AMX 13 was originally designed in the immediate aftermath of the Second World War. It represents French ambitions for national resurgence and withdrawal from wartime dependence on American military technology.Being a light tank it was an ambitious and far sighted departure from conventional tank design and it found a ready export market as well as being a critical part in the French Army arsenal. Its basic hull design lent itself to the development of a vast list of variants.French designers progressively modernized, and indeed reinvented, the AMX13 and enabled it to claim to be one of the most successful armored vehicle programs of the postwar period. It proved its worth in numerous small wars worldwide in the service of many countries.This, the first commercially published work on the AMX13 in English, examines in detail the technical industrial and tactical story of this remarkably successful armored fighting vehicle. The authoritative text is backed by an impressive selection of images

*The Police Officer's Guide to Operating and Surviving in Low-light and No-light Conditions* Tony L. Jones,2002 This book reminds the reader that many police shootings occur during diminished light, and with few exceptions, officers do not receive enough training in these conditions; in addition, recommendations are made for officers to use senses other than vision, teamwork, and technological innovations to increase an officer's chance of success when working in dim-light or no-light conditions. The majority of crimes and officer shootings occur at night in diminished light or no-light settings. The Federal Bureau of Investigation reports that during a 9-year period (1985-1994), almost 63 percent of police officer deaths occurred between 6:00 p.m. and 6:00 a.m. During these hours, it is difficult for officers to accurately identify an alleged suspect's face easily or identify any weapons he or she may be in possession of. Add stress and an increased heart rate to an already tense situation and it is easy to understand the need for additional training under these conditions. The dark is fraught with peril and danger, but increased training can alleviate stress and increase proficiency. Moreover, officers can rely upon other senses and additional training can help facilitate decision-making under these difficult circumstances. Technological advances and team techniques can also be incorporated into officer training. Directional microphones, night vision and thermal imaging devices and infrared lights are a few of the technological advances that may aid officer shootings during dim-light or no-light environments.

**Flash Techniques for Location Portraiture** Alyn Stafford,2014-12-26 Small-flash photography has become widely popular because of its portability and affordability, and this book offers insights on mastering the use of small-unit, hot shoe-mounted flashes called flashguns. Demonstrating the various light modifiers, techniques, and setups designed for these small powerhouses of light, the book explores how to achieve creative results from working with a single flashgun, multiple flashguns, and colored filters, as well as making adjustments with the camera's white-balance settings. The guide lists the tools required for location-portrait photography and discusses different lighting setups—from shooting in direct sunlight to night and low-light photos—for various location-portrait situations, giving photographers the confidence to make lighting decisions to produce professional results.
