Artificial Neural Networks - ICANN 2010 Konstantinos Diamantaras,Wlodek Duch,Lazaros S. Iliadis,2010-09-13 th This volume is part of the three-volume proceedings of the 20 International Conference on Artificial Neural Networks (ICANN 2010) that was held in Thessaloniki, Greece during September 15-18, 2010. ICANN is an annual meeting sponsored by the European Neural Network Society (ENNS) in cooperation with the International Neural Network Society (INNS) and the Japanese Neural Network Society (JNNS). This series of conferences has been held annually since 1991 in Europe, covering the field of neurocomputing, learning systems and other related areas. As in the past 19 events, ICANN 2010 provided a distinguished, lively and interdisciplinary discussion forum for researchers and scientists from around the globe. It offered a good chance to discuss the latest advances of research and also all the developments and applications in the area of Artificial Neural Networks (ANNs). ANNs provide an information processing structure inspired by biological nervous systems and they consist of a large number of highly interconnected processing elements (neurons). Each neuron is a simple processor with a limited computing capacity typically restricted to a rule for combining input signals (utilizing an activation function) in order to calculate the output one. Output signals may be sent to other units along connections known as weights that excite or inhibit the signal being communicated. ANNs have the ability "to learn" by example (a large volume of cases) through several iterations without requiring a priori fixed knowledge of the relationships between process parameters.

*The European Dimension of Germany's Energy Transition* Erik Gawel,Sebastian Strunz,Paul Lehmann,Alexandra Purkus,2019-02-07 This book addresses the interactions between Germany's energy transition and the EU's energy policy framework. It seeks to analyze the manifold connections between the prospects of the proclaimed "Energy Union" and the future of Germany's energy transition, and identifies relevant lessons for the transformation at the EU level that can be learned from the case of Germany, as a first-mover of transforming energy systems towards renewables. The various repercussions (political, economic and systemic) from the national transition are explored within the EU context as it responds to the German transition, taking into account both existing frictions and potential synergies between predominantly national sustainability policies and the EU's push towards harmonized policies within a common market. The book's overall aim is to identify the most critical issues, in order to avoid pitfalls and capitalize on opportunities.
