**The Book on the Floor** WALTER GRASSKAMP, 2016-12-10 In 1954, the French writer, politician, and publisher André Malraux posed at home for a photographer from the magazine *Paris Match*, surrounded by pages from his forthcoming book *Le musée imaginaire de la sculpture mondiale*. The enchanting metaphor of the musée imaginaire (imaginary museum) was built upon that illustrated art book, and Malraux was one of its greatest champions. Drawing on a range of contemporary publications, he adopted images and responded to ideas. Indeed, Malraux's book on the floor is a variation of photographer André Vigneau's spectacular *Encyclopédie photographique de l'art*, published in five volumes from 1935 on—years before Malraux would enter this field. Both authors were engaged in juxtaposing artworks via photographs and publishing these photographs by the hundreds, but Malraux was the better sloganeer. Starting from a close examination of the photograph of Malraux in his salon, art historian Walter Grasskamp takes the reader back to the dawn of this genre of illustrated art book. He shows how it catalyzed the practice of comparing works of art on a global scale. He retraces the metaphor to earlier reproduction practices and highlights its ubiquity in contemporary art, ending with an homage to the other pioneer of the “museum without walls,” the unjustly forgotten Vigneau.

*Floors* Patrick Carman, 2013-05 Leo, the son of the maintenance man of the Whippet Hotel, opens a series of cryptic boxes which reveals hidden floors, strange puzzles, and unexpected alliances and leads him on an adventure to save the building and his future.

*A Lady Has the Floor* Kate Hannigan, 2020-11-03 Written in the same vein as the recent best-selling titles *I DISSENT* and *SHE PERSISTED*, here is a nonfiction picture book biography of Belva

Lockwood, a lawyer, activist and presidential candidate who devoted her life to overcoming obstacles and demanding equality for women. Activist Belva Lockwood never stopped asking herself the question Are women not worth the same as men? She had big dreams and didn't let anyone stand in her way--not her father, her law school, or even the U.S. Supreme Court. She fought for equality for women in the classroom, in the courtroom, and in politics. In her quest for fairness and parity, Lockwood ran for President of the United States, becoming the first woman on the ballot. In this riveting nonfiction picture book biography, award-winning author Kate Hannigan and celebrated artist Alison Jay illuminate the life of Lockwood, a woman who was never afraid to take the floor and speak her mind.

Technology of Floor Maintenance and Current Trends William J. Schalitz, 2004

**Fire Resistance of Steel Deck Floor Assemblies** Harry Shoub, Simon H. Ingberg, 1967 Tests

were conducted to determine the resistance to fire of welded steel plate and beam floor assemblies with various conditions of floor covering on the plates, and ceiling protections beneath the beams. The trials included fire exposures from the burnout of combustible materials ranging from 10 to 40 lb/sq ft on the floor surface as well as standard fire endurance tests in which the ceiling of the structure was exposed to fire. The results of the tests indicated that the use of steel floor structures was practical from considerations of fire safety. For the test conditions established, fire exposure on top of the floor did not heat the structural steel supporting members sufficiently to cause load failure or collapse, and did not produce untenable conditions in the room below. In tests involving fire exposure to the underside of floors, the fire endurance times, based solely on heat transmission criteria, ranged from 1 hr 24 min to over 4 hr. Temperature levels attained by the structural members and deflection of the floor assemblies are also reported. (Author).

*Analysing Data from Capacitive Floor Sensors for Human Gait Assessment Using Artificial Neural Networks* Raoul Hoffmann, Gait analysis is valuable in medical research and diagnosis, by delivering information that helps in choosing methods of intervention and rehabilitation that are beneficial for a patient. In gait laboratories, cameras or IMUs are often used to gather gait patterns. This thesis explores the possibility of using sensors below the floor as a gait data source. These sensors measure changes in the electrical capacitance to recognise steps. The construction is designed for indoor environments and is hidden under common flooring layer types. Therefore, it is very robust and suitable for practical use in daily clinical routine. A formal framework was developed to represent the measurements, considering the special characteristics of this floor sensor. The data were then used as input for artificial neural networks that were applied on classification and regression tasks. In a feature construction and extraction approach, the spatial spread of footfalls was derived and used with a feed-forward neural network. Then, in a feature learning approach, the time series data was transformed into a local receptive field, and used with a recurrent neural network. Three studies were conducted for the goals to distinguish between people with low and high risk of falling, to estimate age, and to recognise walking challenges as an external

gait intervention. The combination of a robust and hidden floor sensor and machine learning opens up the prospect of future applications in health and care.

There is no substitute that can be used on the same engineering scale and its sustainability, exploitation and further development are imperatives to creating and maintaining a healthy economy and environment worldwide.
