Big Ideas in Education Dr Russell Grigg, 2016-06-02 Big Ideas in Education: What Every Teacher Should Know by Dr Russell Grigg provides an accessible and easily understood introductory guide to the big ideas that really matter in education. The teaching profession is saturated with ideas. Unfortunately, some of these are half-baked or fundamentally flawed. Dr Russell Grigg moves beyond the unhelpful supposed dichotomies that pervade current educational thinking child-centred versus teacher-centred, traditional versus progressive. Throughout the book, readers are invited to question assumptions and popular rhetoric and reflect on their own experiences. Big Ideas in Education aims to equip teachers with a good understanding of current thinking in a diverse, fluid and dynamic field. Each of the big ideas is discussed within the framework of four questions: what is the big idea, who is behind it, why is it important and what can you do? Big ideas are important, distinctive, empowering, adaptable and simple to understand. Dr Russell Grigg provides readers with a concise and reliable introduction to twelve such ideas, which are at the core of educational practice. The ideas chosen are general rather than subject-specific in nature. In turn, they invite the reader to look at teaching in wider society, address elements of learning which teachers actively promote, raise questions about why, how and what to teach and, finally, look at ways of improving the quality of education. The twelve big ideas under discussion are: (1.) Education education goes beyond the school gates and is a lifelong experience. (2.) Childhood children need time and space to explore, enjoy learning and develop as children rather than miniature adults. (3.) Knowledge knowledge is the foundation for learning. (4.) Skills learners need to develop a broad range of skills in real-life, relevant contexts. (5.) Dispositions effective learning depends upon cultivating positive dispositions. (6.) Ethics teachers' conduct should be guided by a moral purpose. (7.) Instruction direct instruction is a tried-and-tested means of effective teaching. (8.) Curriculum the curriculum is all the learning and assessment activities in school, both planned and unintentional, that contribute to agreed educational goals. (9.) Feedback providing personalised, accurate, specific and timely feedback is one of the keys to improving learning. (10.) Reflective practice good teachers critically analyse their practice with a view to improving what they do. (11.) Research research has a central role to play in the professional development of teachers. (12.) Professional leadership effective school leadership operates at all levels and is about shared vision, support and securing improvement. An ideal book for busy teachers who need to be kept up to speed with the latest thinking in education, this comprehensive guide provides the essential knowledge to keep you fully informed, whether leading staff discussions, submitting assignments or preparing for interviews. Suitable for teachers in any setting, from trainees and NQTs to more experienced practitioners looking to reflect on their practice, the book will also appeal to school leaders and teacher training providers.

Five Big Ideas for Effective Teaching Donna Wilson, Marcus Conyers, 2020 This is the second edition of the seminal text designed to empower educators with an innovative and inspiring conceptual framework for effective teaching. This bestseller is grounded in the synergy of five big ideas for connecting mind, brain, and education research to classroom practice: neuroplasticity, potential, malleable intelligence, the Body-Brain System, and metacognition. Updated and expanded to include new sections on social and emotional learning, this edition offers a firm foundation for implementing current rigorous standards. The authors draw on their experience working with tens of thousands of educators worldwide to drive the book's focus on practical application. Essential ideas are reinforced through vignettes, examples, inspirational stories from teachers, strategies, reflective questions, and current research on how people learn. "Five Big Ideas for Effective Teaching is a wonderful synthesis of some of the most important and impacting concepts to come out of the learning sciences and into the classroom. Any serious teacher and educational leader should consider this basic reading. A pleasure to read." —Tracey Tokuhama-Espinosa, professor, Harvard University Extension School "Wilson and Conyers provide an excellent, gentle entry into the modern learning sciences while promoting clear understanding of their importance and impact on contemporary learners. More Voices from the Classroom Brian Hand,Lori Norton-Meier,Jeong-yoon Jang,2017-08-24 The intent of this book is to provide a rich and broad view of the impact of argument-based inquiry in classrooms from the perspective of the teacher. There are two important reasons for such a book. The first is that we as researchers constantly work to present our views of these experiences with the voice of the teachers only being relayed through the perspective of the researcher. We need as a community to listen to what the teachers are telling us. The second reason is that as demands grow to provide opportunities for students to pose questions, make claims, and provide evidence, that is, to think critically and reason like scientists, we need to understand what this looks like from the perspective of the teacher. This book brings together a range of teachers from several countries who have used the Science Writing Heuristic (SWH) approach to teach argument-based inquiry. These teachers have all gone through professional development programs and successfully implemented the approach at a high level.

What's the BIG Idea? Vicki Cobb,2013-09-01 Why don't we feel the Earth move? Why does an ice cube float? Why can't you unscramble an egg? Why can't we live forever? These are all questions that a curious kid might ask. In *What's the BIG Idea?*, renowned juvenile science educator Vicki Cobb answers these and other fascinating questions to help kids learn more about the world through the wonders of science. A big idea is one that has no simple or easy answer, and there are four big ideas

in this book: motion, energy, matter, and life. The motion of nonliving objects—rolling balls, falling stones, the moon and stars—seems so ordinary and familiar that most people take it for granted. Matter, on the other hand, comes in so many different forms—solids, liquids, gases, metals, nonmetals, living material—that it is hard to imagine anything that all matter has in common. Energy is an idea that is in the news just about every day, yet most people couldn't tell you what the big idea of energy is. And life—what life is—seems mind-boggling and infinitely complicated. How do we bend our brains around it? Scientists learn by asking questions. And this book, now in paperback, is designed to make young readers stop and think about each of the questions before reading what scientists have learned that answers each question. They'll be able to do simple things to see for themselves, and they will build their own scientific knowledge in the process. By the time they've finished this book, they'll get the big picture of what science is all about.

The Big Idea, 2011 From the Pythagorean theorem to DNA's double helix, from the discovery of microscopic life-forms to the theory of relativity--the big ideas of science and technology shape an era's worldview. Open this book, grasp the newest ideas from thought leaders of today, then spring off from them to move back through the past, one big idea at a time. Meet the people who gave birth to these ideas--and those who fought against them. Meet the MIT electrical engineer currently developing a way to turn on the lights cordlessly, then move back through Nikola Tesla's visionary concept of the wireless transfer of energy, Thomas Edison's groundbreaking work in developing a nationwide electrical grid, Ben Franklin's experiments to capture electricity, all the way back to ancient Greece, where Thales of Miletus described static electricity as a property of naturally occurring amber. Ingeniously organized and eminently browsable, this richly visual volume is divided into six big sections--medicine, transportation, communication, biology, chemistry, and the environment. Words and images that work together to explain such fascinating and elusive subjects as cloud computing, sunshields to cool the Earth, and self-driving cars. What did it take to get to these futuristic realities? Then, turn the page and follow a reverse-chronological illustrated time line of science and technology. This remarkable illustrated history tells the story of every Big Idea in our history, seen through the lens of where science is taking us today - and tomorrow. With an irresistibly cutting-edge look and original illustrations created by award-winning Ashby Design, paired with the reliable authority and comprehensiveness that National Geographic's world history books always offer, this is a one-of-a-kind trip to the future and back through all time all in one.

Tails from the Classroom Dr Russell Grigg, Helen Lewis, 2021-01-14 Written by Helen Lewis and Russell Grigg, *Tails from the Classroom: Learning and teaching through animal-assisted interventions (AAls)* is a fascinating exploration of the use of AAls in educational settings and how they can inspire and support learners' all-round development. There is growing interest in the idea of bringing animals into the classroom, but it is only recently that researchers have gathered clear data to show the impact of AAls on the behavioural, emotional, physical and cognitive development of children and young people. *Tails from the Classroom* brings together this research in a highly accessible way, illustrated with real-life case studies from a range of classroom contexts. It also includes lots of practical guidance on how to set up, manage and evaluate a project, ensuring that the welfare of all participants, including the animals, is a priority. Helen and Russell discuss how AAls can contribute towards learning in different subject areas and across the curriculum, sharing a wide range of examples to illustrate possible starting points for teachers in a range of subject and thematic contexts - even in less obvious areas such as the arts, literature, and religious and moral codes. They also provide a historical overview of human-animal interactions, highlighting how animals have played a central part in humans' social, spiritual and cultural development. This then underpins the authors' exploration into animals' potential role in enhancing particular dimensions of children's social, emotional, intellectual and physical development and well-being. This groundbreaking book is not just for animal-loving educators, however. It is for anyone who is serious about inspiring learners of all ages and prepared to explore new ways of doing so. Suitable for educators working with learners of all ages.
