Income Distribution, Inflation, and Growth Lance Taylor,1991 Structuralist macroeconomics has emerged recently as the only viable theoretical alternative for economists and practitioners in developing countries. Lance Taylor's innovative work represents a landmark in this field. It codifies a new generation of structuralist macroeconomic models that incorporate the economic power relationships of key institutions and groups, integrates both finance and real macroeconomics, and covers a diverse range of experience in the developing world over the past three decades. In an introduction Taylor explains his methodology, describes assumptions underlying the models used, and reviews theories that relate economic growth and the role of financial assets. He then takes up basic structuralist models of a closed economy and moves on to consider the open economy cases. He incorporates the latest developments in the field (inflation, financial crisis, exchange rate management, increasing returns, and the like) in a treatment that departs substantially from economic orthodoxy. Taylor first addresses the question of how to specify closure or define the causal structure of macro models. He also considers how income redistribution influences growth and output and how income redistribution interacts with inflation. Next, an investment-driven non-full employment growth model draws on ideas introduced earlier to illustrate how different sorts of macroeconomic policies affect short-run adjustment and growth prospects over time. Taylor then turns to the problems proposed by economic openness in a stylized semi-industrialized country, starting with international trade. A fix-price/flex-price model is developed, and additional models demonstrate cases of policy relevance as well as interactions between class conflict and growth.

International Capital Markets John Eatwell,Lance Taylor,2002 Comprising 19 commissioned articles, this collection addresses the global issues of volatility in equity and foreign exchange markets and the regulatory scene in developed and emerging markets.

Argentina and the Fund Michael Mussa,2002 The catastrophic crisis of late 2001 and early 2002 marks the tragic end to Argentina's initially successful, decade-long experiment with sound money and market-oriented economic reform. The IMF consistently Supported Argentina's stabilization and reform efforts in the decade leading up to the current crisis and often pointed to many of Argentina's policies as examples for other emerging-market economies to emulate. In this policy analysis, former IMF Chief Economist Michael Mussa addresses the obvious question: What went wrong in Argentina and what important errors did the IMF make in either supporting inappropriate policies or in failing to press for alternatives that might have avoided catastrophe? He emphasizes that the persistent inability of the Argentine authorities at all levels to run a responsible fiscal policy--even when the Argentine economy was performing very well--was the primary avoidable cause of the country's catastrophic financial collapse. The IMF failed to press aggressively for a more responsible fiscal policy. Mussa also addresses the role of the Convertibility Plan, which linked the Argentine peso rigidly at parity with the US dollar and played a central role in both the initial success and ultimate collapse of Argentina's stabilization and reform efforts. While the IMF accepted this plan as a basic policy choice of the Argentine authorities so long as it remained viable, it erred in the summer of 2001 by extending further massive support for unsustainable policies, rather than insisting on a new policy strategy that might have mitigated some of the damage from a crisis that had become unavoidable. Mussa lays out what needs to be done to restore economic andfinancial stability in Argentina and begin the process of recovery, including the proper role of the IMF and the international community. He also examines what the IMF can do to avoid repeating the types of mistakes it made in t

Global Finance at Risk John Eatwell,Lance Taylor,2001 Argues for a world financial authority with the power to establish worldwide, best-practice financial regulation and risk management, citing historical situations that were resolved by similar agencies. Reprint.

Growth with Stability Manuel Agosin,2002 During the 1990s, countries in the Latin American and Caribbean region regained access to external finance from international capital markets for the development of their economies. However, the volatility of these sources of finance and the region's pro-cyclical macroeconomic policies have been reflected in unusually frequent financial crises and unstable economic growth. This publication proposes a strategy for growth for the region, based on three key aspects of promoting stability of international capital flows for development financing; trade linkages and access to external capital; and promoting

national capital resources by boosting public and private saving and investment.
