Astrophysical Formulae Kenneth Lang,2013-11-11 This book is meant to be a reference source for the fundamental formulae of astrophysics. Wherever possible, the original source of the material being presented is referenced, together with references to more recent modifications and applications. More accessible reprints and translations of the early papers are also referenced. In this way the reader is provided with the often ignored historical context together with an orientation to the more recent literature. Any omission of a reference is, of course, not meant to reflect on the quality of its contents. In order to present a wide variety of concepts in one volume, a concise style is used and derivations are presented for only the simpler formulae. Extensive derivations and explanatory comments may be found in the original references or in the books listed in the selected bibliography which follows. Following the convention in astrophysics, the C. g. S. (centimeter-gram-second) system of units is used unless otherwise noted. To conserve space, the fundamental

constants are not always defined, and unless otherwise noted the following symbols have the following meaning and value. Symbol Meaning Value
 c Speed of light in vacuum $2.997924562(11) \times 10^{10}$ cm/s
 h Planck's constant $6.626196(50) \times 10^{-27}$ erg s
 \hbar Rationalized Planck's constant $1.0545919(80) \times 10^{-27}$ erg s
 k Boltzmann's constant $1.380622(59) \times 10^{-16}$ erg/K
