Highly Contiguous Plant Genome Assembly and Transcriptional Regulation Kai-Hua Jia,Yongpeng Ma,Wei Zhao,Guanjing Hu,2024-03-01 Highly contiguous reference genome sequences are a prerequisite for genomics research and for the optimal utilization of plant species. However, whole-genome duplication events and subsequent chromosomal rearrangements and losses shape the complex features and extensive diversity of plant genomes, and hinder their highly contiguous assembly. With the advent of single-molecule, long-read sequencing technologies, such as PacBio High-Fidelity (HiFi) and Oxford Nanopore Technologies (ONT), as well as Bionano genomics and high-throughput chromatin conformation capture (Hi-C), many highly complex chromosome-level genomes have been revealed, even with phased haplotypes. These advanced sequencing technologies, coupled with improvements in assembly methods, have greatly improved the quality of the assembled genomes. Transcriptomics and metabolomics are playing an increasingly important role in research into genetic variation and functional genes, and enable their combination with other omics

studies. For example, in studies of plant stress resistance, the application of transcriptomics and metabolomics technologies allows comprehensive and dynamic detection of the spatial and temporal changes in plant genes/metabolite expression under stress, enabling functional genes to be “mined” and the regulatory mechanism underlying stress responses to be analyzed, providing a molecular genetic basis for the breeding of stress-resistant varieties.

**Domain Decomposition Methods for the Numerical
Solution of Partial Differential Equations** Tarek

Mathew, 2008-06-25 Domain decomposition methods are divide and conquer computational methods for the parallel solution of partial differential equations of elliptic or parabolic type. The methodology includes iterative algorithms, and techniques for non-matching grid discretizations and heterogeneous approximations. This book serves as a matrix oriented introduction to domain decomposition methodology. A wide range of topics are discussed include hybrid formulations, Schwarz, and many more.

Higher Structures in Geometry and Physics Alberto S.

Cattaneo, Anthony Giaquinto, Ping Xu, 2010-11-25 This book is centered around higher algebraic structures stemming from the work of Murray Gerstenhaber and Jim Stasheff that are now ubiquitous in various areas of mathematics— such as algebra, algebraic topology, differential geometry, algebraic geometry, mathematical physics— and in theoretical physics such as quantum field theory and string theory. These higher algebraic structures provide a common language essential in the study of

deformation quantization, theory of algebroids and groupoids, symplectic field theory, and much more. Each contribution in this volume expands on the ideas of Gerstenhaber and Stasheff. The volume is intended for post-graduate students, mathematical and theoretical physicists, and mathematicians interested in higher structures.

This is the story of my grandfather, B-24 Liberator Co-Pilot, Flight Officer and later Lieutenant, Francis Joseph Morrissey. This book chronicles his life: from growing up in Dayton, Ohio; becoming a factory worker just out of high school; enlisting in the Army Air Forces in 1942; completing Pilot School in Lubbock, Texas in August 1943; training to fly a B-24 Liberator; forming and training a crew in Clovis and Alamogordo, New Mexico with Pilot Francis S. Rzatkowski and Navigator "Handsome" Harry E. Parr; being assigned to Crew #302-9-59 in one of the four squadrons in the 450th Bombardment Group - the 722nd Bombardment Squadron (H); flying half way around the world from Herington, Kanas to Manduria, Italy in November and December 1943 with Rzatkowski and Parr on B-24H Liberator Serial No.41- 28603 - the "603" - - painted the "Chiquita Mia" around 10 November 1943; flying missions from Manduria Airfield on three ships; being shot down over Krizevci, Yugoslavia on 30 May 1944 on his 27th mission while Co-Pilot of B-24H Liberator Serial No. 42-94901; interrogation and processing at Dulag Luft; internment at Stalag Luft III; "The March" to Stalag XIII-D Nurnberg Langwasser starting on 27 January 1945; internment at Stalag VII-A; liberation by Patton's Third Army on 30 April 1945; time

Elliptic Carleman Estimates and Applications to Stabilization and Controllability, Volume II Jérôme Le Rousseau, Gilles Lebeau, Luc Robbiano, 2022-04-22 This monograph explores applications of Carleman estimates in the study of stabilization and controllability properties of partial differential equations, including quantified unique continuation, logarithmic stabilization of the wave equation, and null-controllability of the heat equation. Where the first volume derived these estimates in regular open sets in Euclidean space and Dirichlet boundary conditions, here they are extended to Riemannian manifolds and more general boundary conditions. The book begins with the study of Lopatinskii-Sapiro boundary conditions for the Laplace-Beltrami operator, followed by derivation of Carleman estimates for this operator on Riemannian manifolds. Applications of Carleman estimates are explored next: quantified unique continuation issues, a proof of the logarithmic stabilization of the boundary-damped wave equation, and a spectral inequality with general boundary conditions to derive the null-controllability result for the heat equation. Two additional chapters consider some more advanced results on Carleman estimates. The final part of the book is devoted to exposition of some necessary background material: elements of differential and Riemannian geometry, and Sobolev spaces and Laplace problems on Riemannian manifolds.
