The Asia-Pacific Trade Agreement Joong-Wan Cho,Rajan Sudesh Ratna,2016 International trade and investment have enabled many countries in the Asia-Pacific region to boost economic growth and have lifted millions out of poverty. As the Asia-Pacific region continues to thrive economically, trade and investment barriers are being dissolved and eliminated. As countries begin to depend on each other more, trade policy is gradually becoming a useful measure to achieve inclusive and sustainable development. Trade and investment are linked to the environment and social issues; hence, their impacts are also multi-dimensional. It has now been recognized that sustainable production and consumption are essential for sustainable development. Countries realize that they are not able to approach global and regional problems on their own and require cooperation, both at the level of government and business. As a result, the region has been active in concluding regional cooperation frameworks which routinely are centered on trade and investment. In the meantime, business has forged regional integration through the formation of regional value chains and production networks while governments have paved the way for the expansion of such production networks through the formation of regional trade agreements and economic partnerships. Thus, the Asia Pacific Trade Agreement (APTA), which is the oldest preferential trade agreement in the region with a large consumer base, can play an important role in filling this gap. Given a slow progress in the multilateral negotiations in the WTO, especially when the members have started questioning the utility of the negotiations after 15 years, and a lack of consensus on how to move forward, the regional trade agreements can play a vital role. Even if they pose a challenge to the multilateralism, selected liberalisation of trade and economy in present time can become a building block for future multilateral negotiations. One of the reasons for the surge in these preferential trade agreements is to make binding commitments on WTO-plus and WTO-beyond issues. While there are many agreements that exist in Asia and the Pacific, there is no such attempt to consolidate them in one umbrella framework. Understanding the benefits of the consolidation, one such initiative was started by ESCAP a few years back. The RECI initiative for market integration could well be facilitated by APTA; however, it cannot deliver unless it transforms itself in a new generation agreement. Regional integration and cooperation are also important to meet the 2030 agenda for sustainable development. Instead of wasting resources in discussing a new institutional framework, it would be more effective to use the existing framework and for the Asia-Pacific economies, the APTA provides an existing institutional platform. The cases discussed in this book prepare a ground for the future, and it is expected that all the stakeholders, member States of ESCAP, private sector as well as researchers would benefit from this publication on APTA: South-South Regional Integration and Sustainable Development.

Geotectonics V. V. Belousov,2012-12-06 Geotectonics has a special place among the geological disciplines. In addition to ideas based on firmly established facts that constitute lasting scientific values, geotectonics, as a generalizing branch of geology, embraces broad constructions that link the planet's deep interior with its surface and are largely of a hypothetical character. The interpretation of the most general matters of the structure and evolution of the globe varies not only from one generation of geologists to another, but even within one generation. The interpretation depends not only, and not so much, on the state of geological knowledge, as on the progress of the related sciences of geophysics and geochemistry. In trying to discover the deep-lying causes of tectonic processes, geotectonics has to unite the results of all the Earth sciences, converting itself to some extent from a purely geological science into a general physical geographic or geonomic science. The fluidity of the general ideas and the need for joint consideration of the geological, geophysical, and geochemical data to substantiate these ideas are the main difficulties facing the author of a textbook on geotectonics. There is undoubtedly, however, a need for a manual of this kind, particularly now when the literature on the various problems of geotectonics has grown so great and so varied in content that it is very difficult for the experienced researcher, let alone the student, to find his way.

Superplastic Forming of Advanced Metallic Materials G Giuliano,2011-06-27 Ultra fine-grained metals can show exceptional ductility, known as superplasticity, during sheet forming. The higher ductility of superplastic metals makes it possible to form large and complex components in a single operation without joints or rivets. The result is less waste, lower weight and manufacturing costs, high precision and lack of residual stress associated with welding which makes components ideal for aerospace, automotive and other applications. Superplastic forming of advanced metallic materials summarises key recent research on this important process. Part one reviews types of superplastic metals, standards for superplastic forming, processes and equipment. Part two discusses ways of modelling superplastic forming processes whilst the final part of the book considers applications, including superplastic forming of titanium, aluminium and magnesium alloys. With its distinguished editor and international team of contributors, Superplastic forming of advanced metallic materials is a valuable reference for metallurgists and engineers in such sectors as aerospace and automotive engineering. Note: The Publishers wish to point out an error in the authorship of Chapter 3 which was originally listed as: G. Bernhart, Clément Ader Institute, France. The correct authorship is: G Bernhart, P. Lours, T. Cutard, V. Velay, Ecole des Mines Albi, France and F. Nazaret, Aurock, France. The Publishers apologise to the authors for this error. Gender and Representation in Latin America Leslie A. Schwindt-Bayer,2018-01-04 In the past thirty years, women's representation and gender equality has developed unevenly in Latin America. Some countries have experienced large increases in gender equality in political offices, whereas others have not, and even within countries, some political arenas have become more gender equal whereas others continue to exude intense gender inequality. These patterns are inconsistent with explanations of social and cultural improvements in gender equality leading to improved gender equality in political office. Gender and Representation in Latin America argues instead that gender inequality in political representation in Latin America is rooted in institutions and the democratic challenges and political crises facing Latin American countries and that these challenges matter for the number of women and men elected to office, what they do once there, how much power they gain access to, and how their presence and actions influence democracy and society more broadly. The book draws upon the expertise of top scholars of women,

gender, and political institutions in Latin America to analyze the institutional and contextual causes and consequences of women's representation in Latin America. It does this in part 1 with chapters that analyze gender and political representation regionwide in each of five different arenas of representation-the presidency, cabinets, national legislatures, political parties, and subnational governments. In part 2, it provides chapters that analyze gender and representation in each of seven different countries-Argentina, Chile, Costa Rica, Uruguay, Mexico, Brazil, and Colombia. The authors bring novel insights and impressive new data to their analyses, helping to make this one of the most comprehensive books on gender and political representation in Latin America today.

Truth, Lies and Trust on the Internet Monica T. Whitty,Adam Joinson,2008-08-28 The Internet is often presented as an unsafe or untrustworthy space: where children are preyed upon by paedophiles, cannibals seek out victims, offline relationships are torn apart by online affairs and where individuals are addicted to gambling, love, and cybersex. While many of these stories are grounded in truth, they do paint a rather sensationalized view of the Internet, the types of people who use it, and the interactions that take place online. Simultaneously, researchers claim that the Internet allows individuals to express their true selves, to develop 'hyperpersonal' relationships characterised by high levels of intimacy and closeness. At the heart of these competing visions of the Internet as a social space are the issues of truth, lies and trust. This book offers a balanced view of the Internet by presenting empirical data conducted by social scientists, with a concentrated focus on psychological studies. It argues that the Internet's anonymity which can enable, for instance, high levels of self-disclosure in a relationship, is also responsible for many of its more negative outcomes such as deception and flaming. This is the first book to develop a coherent model of the truth-lies paradox, with specific reference to the critical role of trust. Truth, Lies and Trust on the Internet is a useful text for psychology students and academics interested in Internet behaviour, technology, and online deviant behaviour, and related courses in sociology, media studies and information studies.

Development, Trade, and the WTO Bernard M. Hoekman,Aaditya Mattoo,Philip English,2002 Publisher's description: Developing countries are increasingly confronted with the need to address trade policy related issues in international agreements, most prominently the World Trade Organization (WTO). New WTO negotiations on a broad range of subjects were launched in November 2001. Determining whether and how international trade agreements can support economic development is a major challenge. Stakeholders in developing countries must be informed on the issues and understand how their interests can be pursued through international cooperation. This handbook offers guidance on the design of trade policy reform, surveys key disciplines and the functioning of the World Trade Organization (WTO), and discusses numerous issues and options that confront developing countries in using international cooperation to improve domestic policy and obtain access to export markets. Many of the issues discussed are also relevant in the context of regional integration agreements. Separate sections of the handbook summarize what constitutes sound trade policy; the major aspects of the WTO from a development perspective; policy issues in the area of merchandise trade and the liberalization of international transactions in services; protection of intellectual property rights and economic development; new regulatory subjects that are emerging in the agenda of trade talks; and enhancing

participation of developing countries in the global trading system.

Random Field Models in Earth Sciences George Christakos, 2013-10-22 This book is about modeling as a principal component of scientific investigations. In general terms, modeling is the fundamental process of combining intellectual creativity with physical knowledge and mathematical techniques in order to learn the properties of the mechanisms underlying a physical phenomenon and make predictions. The book focuses on a specific class of models, namely, random field models and certain of their physical applications in the context of a stochastic data analysis and processing research program. The term application is considered here in the sense wherein the mathematical random field model is shaping, but is also being shaped by, its objects. Key Features * This book explores the application of random field models and stochastic data processing to problems in hydrogeology, geostatistics, climate modeling, and oil reservoir engineering, among others Researchers in the geosciences who work with models of natural processes will find discussion of; * Spatiotemporal random fields * Space transformation * Multidimensional estimation * Simulation * Sampling design * Stochastic partial differential equations
