Fundamentals of 5G Mobile Networks Jonathan Rodriguez,2015-06-22 Fundamentals of 5G Mobile Networks provides an overview of the key features of the 5th Generation (5G) mobile networks, discussing the motivation for 5G and the main challenges in developing this new technology. This book provides an insight into the key areas of research that will define this new system technology paving the path towards future research and development. The book is multi-disciplinary in nature, and aims to cover a whole host of intertwined subjects that will predominantly influence the 5G landscape, including the future Internet, cloud computing, small cells and self-organizing networks (SONs), cooperative communications, dynamic spectrum management and cognitive radio, Broadcast-Broadband convergence , 5G security challenge, and green RF. This book aims to be the first of its kind towards painting a holistic perspective on 5G Mobile, allowing 5G stakeholders to capture key technology trends on different layering domains and to identify potential inter-disciplinary design aspects that need to be solved in order to deliver a 5G Mobile system that operates seamlessly.

Just Security in an Undergoverned World William Durch,Joris Larik,Richard Ponzio,2018-01-10 Just Security in an Undergoverned World examines how humankind can manage global problems to achieve both security and justice in an age of antithesis. Global connectivity is increasing, visibly and invisiblyin trade, finance, culture, and informationhelping to spur economic growth, technological advance, and greater understanding and freedom, but global disconnects are growing as well. Ubiquitous electronics rely on high-value minerals scraped from the earth by miners kept poor by corruption and war. People abandon burning states for the often indifferent welcome of wealthier lands whose people, in turn, draw into themselves. Humanity's very success, underwritten in large

part by lighting up gigatons of long-buried carbon for 200 years, now threatens humanity's future. The global governance institutions established after World War II to manage global threats, especially the twin scourges of war and poverty, have expanded in reach and impact, while paradoxically losing the political support of some of their wealthiest and most powerful members. Their problems mimic those of their members in struggling to adapt to new problems and maintain trust in norms and public bodies. This volume argues, however, that a properly mandated, managed, and modernized global architecture offers unparalleled potential to midwife solutions to intractable issuesfrom violent conflict and climate change to poverty and pandemic diseasethat transcend borders and the capacities of individual actors. It offers just security as a new framework for charing innovating solutions and strategies for effective and essential global governance.

Simulation Technologies in Networking and Communications Al-Sakib Khan Pathan,Muhammad Mostafa Monowar,Shafiullah Khan,2014-11-06 Simulation is a widely used mechanism for validating the theoretical models of networking and communication systems. Although the claims made based on simulations are considered to be reliable, how reliable they really are is best determined with real-world implementation trials.Simulation Technologies in Networking and Communications: Selecting th

Energy Efficient Smart Phones for 5G Networks Ayman Radwan,Jonathan Rodriguez,2014-10-09 This book addresses current technology trends and requirements leading towards the next era in mobile communication handsets; and beyond that the book proposes innovative solutions that could be candidate solutions for 5G phones. It adopts a multidisciplinary and interdisciplinary stance towards handset design, a necessary ingredient if 5th Generation handset and services are to really take-off. Therefore the scope of the book targets a broad range of

subjects, including energy efficiency, RF design, cooperation, context-aware systems, roaming, and short-range networking, all of which working in synergy to provide seamless mobility and high speed connectivity within a HetNet environment. Specifically, the authors investigate how we can exploit the cooperation paradigm and context-aware mechanism working in synergy to provide energy compliant phones that can introduce power savings of up to 50% on state-of-the-art. Going beyond this, a chapter on business modeling approaches is also included, based on incentive mechanisms for cooperation that will provide the necessary leverage to promote the up-take of the proposed technology.

Global Governance Facing Structural Changes Kim Fontaine-Skronski,Michèle Rioux,2015-08-05 Contemporary governance is a contested field of competing institutional schemes and system of rules. E-Learning in the Middle East and North Africa (MENA) Region Alan S. Weber,Sihem Hamlaoui,2018-02-27 In the last decade, due to factors of ICT infrastructural and broadband maturation, rising levels of educational attainment and computer literacy, and diversification strategies, e-learning has exploded in the Middle East and North Africa (MENA) region. However, significant barriers remain in the region's e-learning development: lack of research on outcomes and effectiveness, paucity of Arabic language learning objects, monopolies and high cost of telecommunications, cultural taboos, accreditation, censorship, and teacher training. This unique volume is the first comprehensive effort to describe the history, development, and current state of e-learning in each of the 20 MENA countries from Algeria to Yemen. Each entry is expertly written by

a specialist who is acutely familiar with the state of e-learning in their respective country, and concludes with a bibliography of key reports, peer-reviewed books and articles, and web resources. E-Learning in the Middle East and North Africa (MENA) proves itself as a vital compendium for a wide readership that includes academics and students, transnational program directors, international education experts, MENA government departments, commercial vendors and investors, and ICT development and regulatory agencies involved in e-learning in the Middle East.

Digital Technologies for Democratic Governance in Latin America Anita Breuer,Yanina Welp,2014-01-10 This book is the first to comprehensively analyse the political and societal impacts of new Information and Communication Technologies (ICT) in a region of the Global South. It evaluates under what conditions some Latin American governments and people have succeeded in taking up the opportunities related to the spread of ICTs, while others are confronted with the pessimist scenario of increased, digitally induced social and democratic cleavages. Specifically, the book examines if and how far the spread and use of new ICT affected central aims of democratic governance such as reducing socio-economic and gender inequality; strengthening citizen participation in political decision making; increasing the transparency of legislative processes; improving administrative processes; providing free access to government data and information; and expanding independent spaces of citizen communication. The country case and cross-country explore a range of bottom-up driven initiatives to reinforce democracy in the region. The book offers researchers and students an interdisciplinary approach to these issues by linking it to established theories of media and politics, political communication, political participation, and governance. Giving voice to researchers native to the region and with direct experience of the region, it uniquely brings together contributions from political scientists, researchers in communication studies and

area studies specialists who have a solid record in political activism and international development co-operation.

Towards the Internet of Services: The THESEUS Research Program Wolfgang Wahlster,Hans-Joachim Grallert,Stefan Wess,Hermann Friedrich,Thomas Widenka,2014-09-01 The Internet of Services and the Internet of Things are major building blocks of the Future Internet. The digital enterprise of the future is based not only on mobile, social, and cloud technologies, but also on semantic technologies and the future Internet of Everything. Semantic technologies now enable mass customization for the delivery of goods and services that meet individual customer needs and tastes with near mass production efficiency and reliability. This is creating a competitive advantage in the industrial economy, the service economy, and the emerging data economy, leading to smart products, smart services, and smart data, all adaptable to specific tasks, locations, situations, and contexts of smart spaces. Such technologies allow us to describe, revise, and adapt the characteristics, functions, processes, and usage patterns of customization targets on the basis of machine-understandable content representation that enables automated processing and information sharing between human and software agents. This book explains the principal achievements of the Theseus research program, one of the central programs in the German government's Digital 2015 initiative and its High-Tech Strategy 2020. The methods, toolsets, and standards for semantic technologies developed during this program form a solid basis for the fourth industrial revolution

(Industrie 4.0), the hybrid service economy, and the transformation of big data into useful smart data for the emerging data economy. The contributing authors are leading scientists and engineers, representing world-class academic and industrial research teams, and the ideas, technologies, and representative use cases they describe in the book derive from results in multidisciplinary fields, such as the Internet of Services; the Semantic Web, and semantic technologies, knowledge management, and search; user interfaces, multimodal interaction, and visualization; machine learning and data mining; and business process support, manufacturing, automation, medical systems, and integrated service engineering. The book will be of value to both researchers and practitioners in these domains.

   Controlling Cyberspace Carol M. Glen,2017-12-07 Informed by theories of international relations, this book assesses global political conflicts over cyberspace. It also analyzes the unique governance challenges that the Internet presents, both in terms of technical problems and control over content. The Internet is a resource of unparalleled importance to all countries and societies, but the current decentralized system of Internet governance is being challenged by some governments that seek to assert sovereign control over the technology. The political battles over governing the Internet-ones that are coming and conflicts that have already started-have far-reaching implications. This book analyzes the shifting nature of Internet governance as it affects timely and significant issues including Internet freedom, privacy, and security, as well as individual and corporate rights. Controlling Cyberspace: The Politics of Internet Governance and Regulation covers a broad range of issues related to Internet governance, presenting a technical description of how the Internet works, an overview of the Internet governance ecosystem from its earliest days to the present, an examination of the roles of the United Nations and other international and regional organizations in Internet governance, and a discussion of Internet governance in relation to specific national and international policies and debates. Readers will consider if access to the Internet is a human right and if the right to freedom of expression applies equally to the exchange of information online. The book also addresses how the digital divide between those in developed countries and the approximately 5 billion people who do not have access to the Internet access affects the issue of

Internet governance, and it identifies the challenges involved in protecting online privacy in light of government and corporate control of information.

Information Economy Report 2011 United Nations Conference on Trade and Development (UNCTAD),2012-02-06 One of the few monitoring global trends related to information and communication technologies (ICTs) from a development perspective, this publication is a valuable reference for policymakers in developing countries. Special attention is given to ICTs in accelerating private sector development (PSD) in developing countries. Many national and donor strategies related to PSD fail to take adequate account of the ICT potential, which has greatly expanded thanks to changes in the global ICT landscape. Different facets of the ICT-PSD interface are explored, including: ICT infrastructure as a factor in the investment climate; ICT use by the private sector; the ICT sector as a part of the private sector, and finally, ICT use in interventions aimed at facilitating PSD.
