Naval Documents of the American Revolution Volume 12, American Theater, April 1, 1778-May 31, 1778; European Theater, April 1, 1778- May 31, 1778 Naval History & Heritage Command (U.S.),2014-07-14 With a foreword by President Barack Obama, the twelfth volume in the Naval History and Heritage Command's Naval Documents of the American Revolution series tells the story of the Revolutionary War on the water during the period of April to June 1778. In the tradition of the preceding volumes—the first of which was published in 1964—this work synthesizes edited documents, including correspondence, ship logs, muster rolls, orders, and newspaper accounts, that provide a comprehensive understanding of the war at sea in the spring of 1778. The editors organize this wide array of texts chronologically by theater and incorporate French, Italian, and Spanish transcriptions with English translations throughout. Volume 12 presents the essential primary sources on a crucial time in the young republic's naval history—as the British consolidate their strength in the Mid-Atlantic, and the Americans threaten British shipping in European waters and gain a powerful ally as France prepares to enter the war.

Searches for Supersymmetric Particles in Final States with Multiple Top and Bottom Quarks with the Atlas Detector Chiara Rizzi,2020-09-01 This PhD thesis documents two of the highest-profile searches for supersymmetry performed at the ATLAS experiment using up to 80/fb of proton-proton collision data at a center-of-mass energy of 13 TeV delivered by the Large Hadron Collider (LHC) during its Run 2 (2015-2018). The signals of interest feature a high multiplicity of jets originating from the hadronisation of b-quarks and large missing transverse momentum, which constitutes one of the most promising final state signatures for discovery of new phenomena at the LHC. The first search is focused on the strong production of a pair of gluinos, with each gluino decaying into a neutralino and a top-antitop-quark pair or a bottom-antibottom-quark pair. The second search targets the pair production of higgsinos, with each higgsino decaying into a gravitino and a Higgs boson, which in turn is required to decay into a bottom-antibottom-quark pair. Both searches employ state-of-the-art experimental techniques and analysis strategies at the LHC, resulting in some of the most restrictive bounds available to date on the masses of the gluino,neutralino, and higgsino in the context of the models explored.
