Erlang Programming Francesco Cesarini,Simon

Thompson,2009-06-11 This book is an in-depth introduction to Erlang, a programming language ideal for any situation where concurrency, fault tolerance, and fast response is essential. Erlang is gaining widespread adoption with the advent of multi-core processors and their new scalable approach to concurrency. With this guide you'll learn how to write complex concurrent programs in Erlang, regardless of your programming background or experience. Written by leaders of the international Erlang community -- and based on their training material -- Erlang Programming focuses on the language's syntax and semantics, and explains pattern matching, proper lists, recursion, debugging, networking, and concurrency. This book helps you: Understand the strengths of Erlang and why its designers included specific features Learn the concepts behind concurrency and Erlang's way of handling it Write efficient Erlang programs while keeping code neat and readable Discover how Erlang fills the requirements for distributed systems Add simple graphical user interfaces with little effort Learn Erlang's

tracing mechanisms for debugging concurrent and distributed systems Use the built-in Mnesia database and other table storage features Erlang Programming provides exercises at the end of each chapter and simple examples throughout the book.

Newsmakers Francesco Marconi,2020-04-07 Will the use of artificial intelligence (AI), algorithms, and smart machines be the end of journalism as we know it—or its savior? In *Newsmakers*, Francesco Marconi, who has led the development of the Associated Press and Wall Street Journal’s use of AI in journalism, offers a new perspective on the potential of these technologies. He explains how reporters, editors, and newsrooms of all sizes can take advantage of the possibilities they provide to develop new ways of telling stories and connecting with readers. Marconi analyzes the challenges and opportunities of AI through case studies ranging from financial publications using algorithms to write

earnings reports to investigative reporters analyzing large data sets to outlets determining the distribution of news on social media. Newsmakers contends that AI can augment—not automate—the industry, allowing journalists to break more news more quickly while simultaneously freeing up their time for deeper analysis. Marshaling insights drawn from firsthand experience, Marconi maps a media landscape transformed by artificial intelligence for the better. In addition to considering the benefits of these new technologies, Marconi stresses the continuing need for editorial and institutional oversight. Newsmakers outlines the important questions that journalists and media organizations should consider when integrating AI and algorithms into their workflow. For journalism students as well as seasoned media professionals, Marconi’s insights provide much-needed clarity and a practical roadmap for how AI can best serve journalism.

Engineering the Eternal City Pamela O. Long,2018-11-20

Between the catastrophic flood of the Tiber River in 1557 and the death of the “engineering pope” Sixtus V in 1590, the city of Rome was transformed by intense activity involving building construction and engineering projects of all kinds. Using hundreds of archival documents and primary sources, *Engineering the Eternal City* explores the processes and people involved in these infrastructure projects—sewers, bridge repair, flood prevention, aqueduct construction, the building of new, straight streets, and even the relocation of immensely heavy ancient Egyptian obelisks that Roman emperors had carried to the city centuries before. This portrait of an early modern Rome examines the many conflicts, failures, and successes that shaped the city, as decision-makers

tried to control not only Rome's structures and infrastructures but also the people who lived there. Taking up visual images of the city created during the same period—most importantly in maps and urban representations, this book shows how in a time before the development of modern professionalism and modern bureaucracies, there was far more wide-ranging conversation among people of various backgrounds on issues of engineering and infrastructure than there is in our own times. Physicians, civic leaders, jurists, cardinals, popes, and clerics engaged with painters, sculptors, architects, printers, and other practitioners as they discussed, argued, and completed the projects that remade Rome.
