Mobile-Mindful Teaching and Learning Christina Moore,2023-07-03 This book provides faculty and instructors with an introductory guide to integrating mobile learning in their courses. Recognizing that a smartphone is the first and main piece of technology anyone owns, with ownership exceeding 95% for those aged 18-29, with a sizable minority of these being smartphone-dependent; and that instructors are relying on technology for teaching and learning more than ever; this book addresses the imperative that course materials and interactions be increasingly available through the technology that students use most often. Dispelling the notion that mobile learning is for the tech-savvy and adventurous, mobile-mindful teaching offers teachers a way to take a few steps at a time, share options with students, and progressively develop ideas and practices. The book invites you to explore your own way into mobile learning.Christina Moore stresses two principles as you engage with mobile learning--intention and fluidity. This begins with mindfully implementing mobile learning opportunities so that students see the usefulness of learning via phone; and recognizing the fluid learning environments in which students learn so you can offer online modalities and functions appropriate to purpose and situations.The book opens with a "start with self" section on How to Be a Mobile Mindful Learner, offering ideas on exploring the almost infinite available online resources in your discipline to curate a rich and ever-expanding compilation of ideas for use in your scholarly work and teaching; and identifying different types of learning (digital reading, audio and visual learning, and social learning) across multiple devices and contexts to consider as you develop your course.The section "Toward Mobile-Mindful Teaching" explores ways to add mobile options to existing learning materials and how they and the LMS functions you use are rendered on a phone by taking a mobile test drive through your course.Christina Moore shows how, by building up your mobile learning skills to be a more productive scholar and developing habits that feed your curiosity and creativity, you can start planning how you can create fluid learning opportunities for your students they can access across devices, time, and space, and take advantage of found moments of time and informal spaces.

**Tactical Display for Soldiers** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, Panel on Human Factors in the Design of Tactical Display Systems for the Individual Soldier, 1997-01-17 This book examines the human factors issues associated with the development, testing, and implementation of helmet-mounted display technology in the 21st Century Land Warrior System. Because the framework of analysis is soldier performance with the system in the full range of environments and missions, the book discusses both the military context and the characteristics of the infantry soldiers who will use the system. The major issues covered include the positive and negative effects of such a display on the local and global situation awareness of the individual soldier, an analysis of the visual and psychomotor factors associated with each design feature, design considerations for auditory displays, and physical sources of stress and the implications of the display for affecting the soldier's workload. The book proposes an innovative approach to research and testing based on a three-stage strategy that begins in the laboratory, moves to controlled field studies, and culminates in operational testing.

**Ask a Manager** Alison Green, 2018-05-01 From the creator of the popular website Ask a Manager and New York's work-advice columnist comes a witty, practical guide to 200 difficult professional conversations—featuring all-new advice! There's a reason Alison Green has been called “the Dear Abby of the work world.” Ten years as a workplace-advice columnist have taught her that people avoid awkward conversations in the office because they simply don't know what to say. Thankfully, Green does—and in this incredibly helpful book, she tackles the tough discussions you may need to have during your career. You'll learn what to say when • coworkers push their work on you—then take credit for it • you accidentally trash-talk someone in an email then hit “reply all” • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems unhappy with your work • your cubemate's loud speakerphone is making you homicidal • you got drunk at the holiday party Praise for Ask a Manager “A must-read for anyone who works . . . [Alison Green's] advice boils down to the idea that you should be professional (even when others are not) and that communicating in a straightforward manner with candor and kindness will get you far, no matter where you work.”—Booklist (starred review) “The author's friendly, warm, no-nonsense writing is a pleasure to read, and her advice can be widely applied to relationships in all areas of readers' lives. **Emergency Alert and Warning Systems** National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on the Future of Emergency Alert and Warning Systems: Research Directions,2018-05-19 Following a series of natural disasters, including Hurricane Katrina, that revealed shortcomings in the nation's ability to effectively alert populations at risk, Congress passed the Warning, Alert, and Response Network (WARN) Act in 2006. Today, new technologies such as smart phones and social media platforms offer new ways to communicate with the public, and the information ecosystem is much broader, including additional official channels, such as government social media accounts, opt-in short message service (SMS)-based alerting systems, and reverse 911 systems; less official channels, such as main stream media outlets and weather applications on connected devices; and unofficial channels, such as first person reports via social media. Traditional media have also taken advantage of these new tools, including their own mobile applications to extend their reach of beyond broadcast radio, television, and cable. Furthermore, private companies have begun to take advantage of the large amounts of data about users they possess to detect events and provide alerts and warnings and other hazard-related information to their users. More than 60 years of research on the public response to alerts and warnings has yielded many insights about how people respond to information that they are at risk and the circumstances under which they are most likely to take appropriate protective action. Some, but not all, of these results have been used to inform the design and operation of alert and warning systems, and new insights continue to emerge. Emergency Alert and Warning Systems reviews the results of past research, considers new possibilities for realizing more effective alert and warning systems, explores how a more effective national alert and warning system might be created and some of the gaps in our present knowledge, and sets forth a research agenda to advance the nation's alert and warning capabilities.
