Cell-Cycle Synchronization Zhixiang

Wang,2022-08-31 This volume covers a broad range of cell types including cultured cell lines, primary cells, and various unicellular organisms such as fission yeast, budding yeast, parasite *Leishmania amazonensis*, and parasite *Trypanosoma brucei*. The chapters in this book are organized into four parts. Part One looks at a general overview of cell cycle control and synchronization. Part Two discusses techniques to synchronize mammalian cells to various cell cycle phases including mitotic sub-phases. Part Three covers synchronization of unicellular organisms and Part Four analyzes cell cycle progression. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and thorough, *Cell-Cycle Synchronization: Methods and Protocols* is a valuable resource for both novice and expert scientists in this developing field.

Understanding Planning Tasks Malte

Helmert,2008-01-24 This monograph is a revised version of Malte Helmert's doctoral thesis, *Solving Planning Tasks in Theory and Practice*, written under the supervision of Professor Bernhard Nebel at Albert-Ludwigs-Universität Freiburg, Germany, in 2006. The book contains an exhaustive analysis of the computational complexity of the benchmark problems that have been used in the past decade. Not only that, but it also provides an in-depth analysis of so-called routing and transportation problems.

Animal Cell Culture and Production of Biologicals Ryuzo

Sasaki,Kouji Ikura,2012-12-06 In the past two decades, the importance of animal cell technology has increased

enormously. First, useful proteins can be produced by cultured animal cells, in which the desired product can be modified and organized so as to retain its biological function. Second, studies of cultured cells can provide information needed to understand molecular mechanisms that govern what happens in tissues, organs, and even entire organisms. For this second purpose, biochemists and molecular biologists may need a large number of such cells. Third, cultured cells can be used instead of tissues and organs clinically. The Third Annual Meeting of the Japanese Association for Animal Cell Technology (JAACT), at which participants from abroad were warmly welcomed, was held in Kyoto on December 11-13, 1990. It was organized around the idea of providing a place for the review of much new data on such applications of cultured cells and for exchanges of the views of the participants about progress in the field. This volume, divided into seven sections, contains the proceedings of the meeting. The first section reviews the molecular basis of the control of animal cell growth. In the following sections, physicochemical and biochemical factors for cell growth and production of biologicals, cell culture systems including serum-free culture, new cell lines, specific products and their characteristics, and in vitro assays for toxic, carcinogenic, and pharmacological effects are taken up in their turn.

Cell Technology for Cell Products Rodney

Smith,2007-01-24 The 19th ESACT meeting was to highlight the novel capabilities of the industry to move the products towards the clinic. It was attended by a wide range of workers in the industry and for many it was their first ESACT meeting. The proceedings here include the short papers adding the knowledge of the previous meetings and provide a reference for the researcher entering, or continuing in the field of Animal Cell Technology.

Practical Approach to Mammalian Cell and Organ Culture Tapan Kumar Mukherjee,Parth Malik,Srirupa Mukherjee,2022-11-07 This Major Reference Work offers a detailed overview of culturing primary, secondary cell lines, tissues, and organs. It first introduces various types of mammalian cell cultures, infrastructure requirements for a mammalian cell-culture laboratory. The subsequent chapters present the detailed protocols for the isolation of mammalian hematologic organs and cells. It also discusses various cell-based assays for monitoring cell viability, cell proliferation, cytotoxicity, cell senescence, and cell death assays. In addition, the book addresses the various problems encountered while culturing animal cells, their possible causes, and suggested solutions, presenting detailed protocols for isolation and primary culturing of various mammalian cells and hematoimmunologic organs in two dimensions. Lastly, it reviews the various applications of animal-cell culture, stem-cell culture, and tissue and organ culture. As such, this reference book is highly relevant for students and professionals new to cell-culture work as well as to those wishing to expand their skills from cell-line cultures to primary cultures and from conventional 2D cultures to 3D cultures.

Engineered Cell Manipulation for Biomedical Application

Misturu Akashi, Takami Akagi, Michiya Matsusaki, 2014-10-16 This book is the first to summarize new technologies for engineered cell manipulation. The contents focus on control of cellular functions by nanomaterials and control of three-dimensional cell-cell interactions. Control of cellular functions is important for cell differentiation, maturation, and activation, which generally are controlled by the addition of soluble cytokines or growth factors into cell culture dishes. Target antigen molecules can be efficiently delivered to the cytosol of the dendritic cells using the nanoparticle technique described here, and cellular functions such as dendritic cell maturation can be controlled easily and with precision. This book describes basic preparation of the nanoparticles, activation control of dendritic cells, immune function control, and in vivo application for various vaccination systems. The second type of control, that of cell-cell interaction, is important for tissue engineering in order to develop three-dimensional cellular constructs. To achieve in vitro engineering of three-dimensional human tissue constructs, cell-cell interaction must be controlled in three dimensions, but typical biological cell manipulation technique cannot accomplish this task. An engineered cell manipulation technique is necessary. In this book the authors describe the fabrication of nanofilms onto cell surfaces, development of three-dimensional cellular multilayers, and various applications of the cellular multilayers as three-dimensional human models. This important work will be highly informative for researchers and students in the fields of materials science, polymer

science, biomaterials, medicinal science, nanotechnology, biotechnology, and biology.

Animal Cell Technology: From Target to Market E.

Lindner-Olsson, N. Chatzissavidou, E. Lüllau, 2012-12-06
Proceedings of the 17th ESACT Meeting June 10-14, 2001, Tylösand, Sweden

The Birth of the Cell Henry Harris, 2000-01-01 Henry Harris here provides an account of how scientists came to understand that the bodies of all living things are composed of microscopic units that we now call cells. Harris turns to the primary literature - the original texts, scientific papers, and correspondence of medical researchers involved in the formulation of the cell doctrine - to reconstruct the events that enabled researchers to comprehend the nature and purpose of cells. Translating many of these documents into English for the first time, Harris uncovers a version of events quite different from that described in conventional science textbooks. Focusing on the scientific history of the genesis of the cell doctrine, the author also considers contemporary social and political contexts and shows how these influenced what experiments were undertaken and how the results were represented.

Recent Advances in Biocatalysis and Metabolic Engineering for Biomanufacturing Eun Yeol

Lee, 2019-09-23 The use of biocatalysts, including enzymes and metabolically engineered cells, has attracted a great deal of attention in the chemical and bio-industry, because biocatalytic reactions can be conducted under environmentally-benign conditions and in more sustainable ways. The catalytic efficiency and chemo-, regio-, and stereo-selectivity of enzymes can be enhanced and modulated using protein engineering. Metabolic engineering seeks to enhance cellular biosynthetic productivity of target metabolites via controlling and redesigning metabolic

pathways using multi-omics analysis, genome-scale modeling, metabolic flux control, and reconstruction of novel pathways. The aim of this book is to cover the recent advances in biocatalysis and metabolic engineering for biomanufacturing of biofuels, chemicals, biomaterials, and pharmaceuticals. Reviews and original research articles on the development of new strategies to improve the catalytic efficiency of enzymes, biosynthetic capability of cell factories, and their applications in production of various bioproducts and chemicals are included.

Cancer Cell Culture Simon P. Langdon,2008-02-01

The culture of cancer cells is routinely practiced in many academic research centers, biotechnology companies, and hospital laboratories. Cancer Cell Culture: Methods and

Protocols describes easy-to-follow methods to guide both novice and more experienced researchers seeking to use new techniques in their laboratories. Our present understanding of the cell and molecular biology of cancer has been derived mainly from the use of cultured cancer cells and we cover a number of the most widely used assays to study function in current use. Part I introduces the basic concept of cancer cell culture and this is followed by a description of the general techniques used in many cell culture facilities. The importance of cell line characterization is now widely recognized and methods to characterize and authenticate cell lines are described in Part II. Part III covers the isolation and development of specific cancer cell types and provides valuable tips for those wishing to derive new cell line models. A wide range of procedures encompassing many of the key functional features of cancer cells are described in Part IV including assays to evaluate clonogenicity, cell proliferation, apoptosis, adhesion, migration, invasion, senescence, angiogenesis, and cell cycle parameters. Methods to modify cancer cells are described in Part V, including protocols for transfection, development of drug-resistance, immortalization, and transfer in vivo. In Part VI methods of coculture of different cell types and contamination of cell lines are covered.
