Free Rose Light Mary O'Connor, 2021-09-28 Free Rose Light is the wide-ranging story of the people and community of South Street Ministries, in Akron, Ohio, told in the style of the ministry--improvisational, risky, and present. As much as this is the story of South Street through O'Connor's experience of the organization, it is also an invitation to the reader by example. There is no set of conclusions or directions provided in this work, save for one: don't let anyone define your story. You claim your own story.

Touching Light Ronelle Wood, 2015-09-07 You have inside you a cloak of gossamer connective tissue that surrounds and supports everything and functions like fiber optics. This tissue is called fascia. In these pages, myofascial release expert Ronelle Wood translates the scientific language for the chemistry, function, and physiology of fascia, shares her hands-on expertise, and explains in layman's terms how our fascia affects us all in everyday life and its potential as a prime source of health and rejuvenation. Gay Hendricks says in his foreword: I've been blessed to know many great healers and teachers over my forty-five years in the field of transformation; Ronelle is right at the top of the list of masterful practitioners I've known. Read this book and you'll no longer perceive your body as a misbehaving slave to be punished into submission, but as a communicative partner--always supporting you.

Barefoot Running Michael Sandler, Jessica Lee, 2011-09-20
How could something we have for free—our bare feet—be better for running than \$150 shoes? The truth is that running in shoes is high-impact, unstable, and inflexible. Shoes promote a heel-centric ground strike, which weakens your feet, knees, and hips, and leads to common running injuries. In contrast, barefoot running is low-impact, forefoot-centric, stable, and beneficial to your body. It encourages proper form and strengthens your feet in miraculous ways. When you run in shoes, you not only risk developing poor form, but you also hinder the natural relationship with the ground that running facilitates. Barefoot running restores the delightful sensory and spiritual connections to the earth that you were meant to experience. Barefoot Running offers the only step-by-step direction runners need at any age to overcome injuries, run faster than ever, and rediscover the pure joy of running. Once you tear off your shoes and learn to dance with nature, you'll tread lightly and freely, hearing only the earth's symphony and feeling only the dirt beneath your feet. Hit the ground running with revolutionary techniques for starting out slowly, choosing minimalist footwear, navigating rough weather and rugged terrain, and building your feet into living shoes.

When we're free there are endless possibilities for God to work in us to accomplish His purpose for our lives. But many of us are not free. When it comes to our God-given purpose, many of us are fearful, unsure, and held back.Insecure. The enemy doesn't want us free.That is the very reason wehaveto become free. In this book you will find the keys that unlock the chains of insecurity. You will find the strength and confidence to be the person God sees, and accomplish the work He has called you to do by tackling issues like: Our lack of identity Believing lies that hold us back Fearing what people think How to walk in freedom Do you want to be free? Synchrotron Light Sources and Free-Electron Lasers

Eberhard J. Jaeschke,Shaukat Khan,Jochen R. Schneider,Jerome B. Hastings,2016-05-27 Hardly any other discovery of the nineteenth century did have such an impact on science and technology as Wilhelm Conrad Röntgen's seminal find of the X-rays. X-ray tubes soon made their way as excellent instruments for numerous applications in medicine, biology, materials science and testing, chemistry and public security. Developing new radiation sources with higher brilliance and much extended spectral range resulted in stunning developments like the electron synchrotron and electron storage ring and the freeelectron laser. This handbook highlights these developments in fifty chapters. The reader is given not only an inside view of exciting science areas but also of design concepts for the most advanced light sources. The theory of synchrotron radiation and of the freeelectron laser, design examples and the technology basis are presented. The handbook presents advanced concepts

like seeding and harmonic generation, the booming field of Terahertz radiation sources and upcoming brilliant light sources driven by laser-plasma accelerators. The applications of the most advanced light sources and the advent of nanobeams and fully coherent x-rays allow experiments from which scientists in the past could not even dream. Examples are the diffraction with nanometer resolution, imaging with a full 3D reconstruction of the object from a diffraction pattern, measuring the disorder in liquids with high spatial and temporal resolution. The 20th century was dedicated to the development and improvement of synchrotron light sources with an ever ongoing increase of brilliance. With ultrahigh brilliance sources, the 21st century will be the century of x-ray lasers and their applications. Thus, we are already close to the dream of condensed matter and biophysics: imaging single (macro)molecules and measuring their dynamics on the femtosecond timescale to produce movies with atomic resolution.
