Multidisciplinary Information Retrieval Allan Hanbury, Andreas Rauber, Arjen De Vries, 2011-06-10 This book constitutes the proceedings of the Second Information Retrieval Facility Conference, IRFC 2011, held in Vienna, Austria, in June 2011. The 10 papers presented together with a keynote talk were carefully reviewed and selected from 19 high-quality submissions. IRF conferences wish to bring young researchers into contact with industry at an early stage. The second conference aimed to tackle four complementary research areas: information retrieval, semantic web technologies for IR, natural language processing for IR, and large-scale or distributed computing for the above areas. The papers are organized into topical sections on patents and multilinguality, interactive retrieval support, and IR and the Net.

Russian Writers on Translation Brian James Baer, Natalia Olshanskaya, 2014-07-16 Since the early eighteenth century, following Peter the Great's policy of forced westernization, translation in Russia has been a very visible and much-discussed practice. Generally perceived as an important service to the state and the nation, translation was also viewed as a high art, leading many Russian poets and writers to engage in literary translation in a serious and sustained manner. As a result, translations were generally regarded as an integral part of an author's oeuvre and of Russian literature as a whole. This volume brings together Russian writings on translation from the mid-18th century until today and presents them in chronological order, providing valuable insights into the theory and practice of translation in Russia. Authored by some of Russia's leading writers, such as Aleksandr Pushkin, Fedor Dostoevskii, Lev Tolstoi, Maksim Gorkii, and Anna Akhmatova, many of these texts are translated into English for the first time. They are accompanied by extensive annotation and biographical sketches of the authors, and reveal Russian translation discourse to be a sophisticated and often politicized exploration of Russian national identity, as well as the nature of the modern subject. *Russian Writers on Translation* fills a persistent gap in the literature on alternative translation traditions, highlighting the vibrant and intense culture of translation on Europe's 'periphery'. Viewed in a broad cultural context, the selected texts reflect a nuanced understanding of the Russian response to world literature and highlight the attempts of Russian writers to promote Russia as an all-inclusive cultural model.

Translation Into English from French and German, 1930

The Art of Translation Jiří Levý, 2011-11-22 Jiří Levý's seminal work, *The Art of Translation*, considered a timeless classic in Translation Studies, is now available in English. Having drawn on adjacent disciplines, the methodology of Czech functional sociosemiotic structuralism and the state-of-the-art in the West, Levý synthesized his findings and experience in the field presenting them in a reader-friendly book, which combines the approaches of a theoretician,

systemic analyst, historian, critic, teacher, practitioner and populariser. Although focused on literary translation from theoretical, descriptive and historical perspectives, it presents a conceptualization of a general theory, addressing a number of issues discussed today. The 'practical' mission of the book as a theory extending to practice is based on the same historical-dialectic affinity of methods, norms, functions and values, accounting for the translator's agency and other contextual agents involved in the communication process. The book will be useful to translators, researchers, students and teachers in Translation and Literary Studies.

Natural Language Processing with TensorFlow Thushan Ganegedara, 2018-05-31 Write modern natural language processing applications using deep learning algorithms and TensorFlow Key Features Focuses on more efficient natural language processing using TensorFlow Covers NLP as a field in its own right to improve understanding for choosing TensorFlow tools and other deep learning approaches Provides choices for how to process and evaluate large unstructured text datasets Learn to apply the TensorFlow toolbox to specific tasks in the most interesting field in artificial intelligence Book Description Natural language processing (NLP) supplies the majority of data available to deep learning applications, while TensorFlow is the most important deep learning framework currently available. Natural Language Processing with TensorFlow brings

TensorFlow and NLP together to give you invaluable tools to work with the immense volume of unstructured data in today's data streams, and apply these tools to specific NLP tasks. Thushan Ganegedara starts by giving you a grounding in NLP and TensorFlow basics. You'll then learn how to use Word2vec, including advanced extensions, to create word embeddings that turn sequences of words into vectors accessible to deep learning algorithms. Chapters on classical deep learning algorithms, like convolutional neural networks (CNN) and recurrent neural networks (RNN), demonstrate important NLP tasks as sentence classification and language generation. You will learn how to apply high-performance RNN models, like long short-term memory (LSTM) cells, to NLP tasks. You will also explore neural machine translation and implement a neural machine translator. After reading this book, you will gain an understanding of NLP and you'll have the skills to apply TensorFlow in deep learning NLP applications, and how to perform specific NLP tasks. What you will learn

- Core concepts of NLP and various approaches to natural language processing
- How to solve NLP tasks by applying TensorFlow functions to create neural networks
- Strategies to process large amounts of data into word representations that can be used by deep learning applications
- Techniques for performing sentence classification and language generation using CNNs and RNNs
- About employing state-of-the-art advanced RNNs, like long short-term memory, to solve complex text generation tasks
- How to write automatic translation programs and implement an actual neural machine translator from scratch
- The trends and innovations that are paving the future in NLP

Who this book is for This book is for Python developers with a strong interest in deep learning, who want to learn how to leverage TensorFlow to simplify NLP tasks. Fundamental Python skills are assumed,

as well as some knowledge of machine learning and undergraduate-level calculus and linear algebra. No previous natural language processing experience required, although some background in NLP or computational linguistics will be helpful.
