Substitute Natural Gas from Waste Massimiliano Materazzi, Pier Ugo Foscolo, 2019-05-01

Substitute Natural Gas from Waste: Technical Assessment and Industrial Applications of Biochemical and Thermochemical Processes provides an overview of the science and technology of anaerobic digestion and thermal gasification for the treatment of biomass and unrecyclable waste residues. The book provides both the theoretical and practical basis for the clean and high-efficiency utilization of waste and biomass to produce Bio-Substitute Natural Gas (SNG). It examines different routes to produce bio-SNG from waste feedstocks, detailing solutions to unique problems, such as scale up issues and process integration. Final sections review waste sourcing and processing. This book is an ideal and practical reference for those developing, designing, scaling and managing bio-SNG production and utilization systems. Engineering students will find this to be a comprehensive resource on the application of fundamental concepts of bio-SNG production that are illustrated through innovative, recent case studies. Presents detailed scientific and technical information Describes up-to-date concepts, processes and plants for efficient anaerobic digestion and gasification of wastes and syngas utilization Compares gasification with anaerobic digestion for different situations Proposes alternative strategies to increase efficiency and overcome energy balance limitations Includes benchmarking data and industrial real-life examples to demonstrate the main process features and implementation pathways of bio-SNG systems from dry and wet waste, both in developed and developing countries

The Gas Station in America John A. Jakle, Keith A. Sculle, 1994 The first architect-designed gas station - a Pittsburgh Gulf station in 1913 - was also the first to offer free road maps; the familiar Shell name and logo date from 1907, when a British mother-of-pearl importer expanded its line to include the newly discovered oil of the Dutch East Indies; the first enclosed gas stations were built only after the first enclosed cars made motoring a year-round activity - and operating a service station was no longer a seasonal job; the system of octane rating was introduced by Sun Oil as a marketing gimmick (74 for premium in 1931). As the number of true gas stations continues its steady decline - from 239,000 in 1969 to fewer than 100,000 today - the words and images of this book bear witness to an economic and cultural phenomenon that was perhaps more uniquely American than any other of this century.--Jacket.
