Modelling Puzzles in First Order Logic Adrian Groza, 2021-10-26 Keeping students involved and actively learning is challenging. Instructors in computer science are aware of the cognitive value of modelling puzzles and often use logical puzzles as an efficient pedagogical instrument to engage students and develop problem-solving skills. This unique book is a comprehensive resource that offers teachers and students fun activities to teach and learn logic. It provides new, complete, and running formalisation in Propositional and First Order Logic for over 130 logical puzzles, including Sudoku-like puzzles, zebra-like puzzles, island of truth, lady and tigers, grid puzzles, strange numbers, or self-reference puzzles. Solving puzzles with theorem provers can be an effective cognitive incentive to motivate students to learn logic. They will find a ready-to-use format which illustrates how to model each puzzle, provides running implementations, and explains each solution. This concise and easy-to-follow textbook is a much-needed support tool for students willing to explore beyond the introductory level of learning logic and lecturers looking for examples to heighten student engagement in their computer science courses.

Pattern-Based Constraint Satisfaction and Logic Puzzles Denis Berthier, 2021-11-17 Pattern-Based Constraint Satisfaction and Logic Puzzles (Third Edition) develops a pure logic, pattern-based perspective of solving the finite Constraint Satisfaction Problem (CSP), with emphasis on finding the simplest solution. Different ways of reasoning with the constraints are formalised by various families of resolution rules, each of them carrying its own notion of simplicity. A large part of the book illustrates the power of the approach by applying it to various popular logic puzzles. It provides a unified view of how to model and solve them, even though they involve very different types of constraints: obvious symmetric ones in Sudoku, non-symmetric but transitive ones in Futoshiki, topological and geometric ones in Map colouring, Numbrix and Hidato, non-binary arithmetic ones in Kakuro and both non-binary and non-local ones in Slitherlink. It also shows that the most familiar techniques for these puzzles can be understood as mere application-specific presentations of the general rules. A free companion software (CSP-Rules-V2.1) implementing all the rules and above-mentioned applications is available on GitHub under the GPL license.

Primitive Mediaeval Japanese Texts Frederick Victor Dickins, 2015-07-18 Excerpt from Primitive Mediaeval Japanese d104s: Translated Into English With Introductions, Notes and Glossaries In preparing the present volume and its companion volume of romanized texts I have desired to assist the English reader towards some fuller understanding of the primitive and mediaeval literature of Japan than can be gathered from merely literal or imitative translations. The examples chosen are the earliest of the categories to which they respectively belong, and have been followed, more or less closely, as models, in the production of most of the purely Japanese - as distinct from Janapo-Chinese - literature of later times. The first is a collection of all the long lays (nagauta or choka) of the famous Anthology (Manyoshu) of the eighth century of our era, together with most of their tanka or hanka - mizika or kaheshi uta - or envoys. The second is the Story of the Old Bamboo Wicker-worker (Taketori no Okina no Monogatari), a romance of the tenth century; the third is Tsurayuki's celebrated preface to his Kokinshu (Garner of Japanese Verse, Old and New), an Anthology mainly of tanka or single stanzas, of the same century, more admired, perhaps, by the Japanese than its immediate and greater predecessor, the Manyoshu itself; and the last is the utah or drama of the No of Takasago, the oldest, it may be, of the miracle-plays or semi-religious plays accompanied by music, mime, and dance of medieval Japan. Building Thinking Classrooms in Mathematics, Grades K-12 Peter Liljedahl, 2020-09-28 A thinking student is an engaged student Teachers often find it difficult to implement lessons that help students go beyond rote memorization and repetitive calculations. In fact, institutional norms and habits that permeate all classrooms can actually be enabling non-thinking student behavior. Sparked by observing teachers struggle to implement rich mathematics tasks to engage students in deep thinking, Peter Liljedahl has translated his 15 years of research into this practical guide on how to move toward a thinking classroom. Building Thinking Classrooms in Mathematics, Grades K-12 helps teachers implement 14 optimal practices for thinking that create an ideal setting for deep mathematics learning to occur. This guide Provides the what, why, and how of each practice and answers teachers' most frequently asked questions Includes firsthand accounts of how these practices foster thinking through teacher and student interviews and student work samples Offers a plethora of macro moves, micro moves, and rich tasks to get started Organizes the 14 practices into four toolkits that can be implemented in order and built on throughout the year When combined, these unique research-based practices create the optimal conditions for learner-centered, student-owned deep mathematical thinking and learning, and have the power to transform mathematics classrooms like never before.
