WebAssembly Essentials Emrys Callahan,2023-10-15 Unleash the Speed: Master WebAssembly and Take Your Web Apps to the Next Level Through practical examples, you'll learn how WebAssembly can transform C++, Rust, and other languages into lightning-fast web apps. Step-by-step, you'll master techniques to integrate WebAssembly modules into JavaScript projects for seamless communication. But we go deeper. You'll discover strategies to optimize code, leverage multi-threading, and apply cutting-edge methods like lazy loading. We also tackle memory management and dive into profiling, benchmarking, and browser tools to push performance to the limits. This isn't just essentials of webassembly - it's a roadmap to learn intricacies, best practices, and solutions to common pitfalls. The goal is to equip you with the expertise to develop insanely fast applications. The future is native-level performance on the web. Join the revolution and skill up with this guide to mastering WebAssembly. Your web apps will never be the same! Key Learnings Grasp WASMs core concepts, bridging web and native apps, boosting performance seamlessly. Dive into tools like Emscripten and Binaryen, facilitating efficient cross language compilations to Wasm. Learn techniques to convert C++, Python, and Java apps, unlocking web application potential. Seamlessly integrate JavaScript and WebAssembly, ensuring smooth inter-module communications. Harness strategies for fine-tuning code, guaranteeing peak application performance. Explore multi-threading, leveraging simultaneous operations, accelerating execution times. Implement lazy loading and code splitting, optimizing web app responsiveness and load times. Dive deep into efficient memory usage, ensuring resourceful application execution. Proficiently use browser developer tools, dissecting and enhancing application performance. Enhance user experience with effective caching, ensuring rapid web application accessibility Prerequisites This book is for every programmer aspiring to put their all applications onto web browser with the same speed, efficiency and product performance. Knowing fundamentals of any programming language and basics of web app development is sufficient to tear out the book wholly.

Proceedings of the Future Technologies Conference (FTC) 2020, Volume 2 Kohei Arai,Supriya Kapoor,Rahul Bhatia,2020-10-31 This book provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research. The fifth 2020 Future Technologies Conference was organized virtually and received a total of 590 submissions from academic pioneering researchers, scientists, industrial engineers, and students from all over the world. The submitted papers covered a wide range of important topics including but not limited to computing, electronics, artificial intelligence, robotics, security and communications and their applications to the real world. After a double-blind peer review process, 210 submissions (including 6 poster papers) have been selected to be included in these proceedings. One of the meaningful and valuable dimensions of this conference is the way it brings together a large group of technology geniuses in one venue to not only present breakthrough research in future technologies, but also to promote discussions and debate of relevant issues, challenges, opportunities and research findings. The authors hope that readers find the book interesting, exciting and inspiring.

PowerBuilder 9 Bill Green,William Green,John D. Olson,2004 Annotation Advanced guide to distributed applications using PowerBuilder 9. This book addresses development Web and Intranet-based systems, including Web Services, Portals, Application-Servers, XML, and Mobile Access. Content provides both specific implementation techniques and architectural patterns for distributed application development. PowerBuilder 9, to be released Q4 2002, introduces many highly-anticipated distributed development features including support for Web Services and Java application servers. Version 9 of PowerBuilder introduces many features designed specifically to blend the traditional strength of PowerBuilder as a rapid Client/Server application development tool with the new emerging models for distributed application development. PowerBuilder developers need PowerBuilder-specific information on interacting with Java application servers, such as WebSphere, WebLogic, and Sybases Enterprise Application Server (EAServer), and Web Service development. This book presents the new capabilities of PowerBuilder 9 along with the architecture and patterns required to create distributed systems in PowerBuilder. William Green and his team of writers are among the most prominent members of the Sybase community, having helped found TeamSybase in 1994. They have written and served on the advisory boards for every major PowerBuilder publication and have authored three books -- PowerBuilder 5 Object-Oriented Design and Development, PowerBuilder Foundation Class (PFC), and Secrets of the PowerBuilder Masters. They respond to several hundred newsgroups and listserv postings daily. They are active consultants implementing PowerBuilder-based solutions and serve on key community advisory panels within Sybase.

Technologies and Protocols for the Future of Internet Design: Reinventing the Web Prakash Vidyarthi, Deo,2012-02-29 The Internet has changed significantly from its beginnings as a simple network used to pass data from one computer to another. Containing essential tools for everyday information processing, the Internet is used by small and large organizations alike and continues to evolve with the changing information technology landscape. Technologies and Protocols for the Future of Internet Design: Reinventing the Web aims to provide relevant methods and theories in the area of the Internet design. It is written for the research community and professionals who wish to improve their understanding of future Internet technologies and gain knowledge of new tools and techniques in future Internet design.

Realtime Web Apps Jason Lengstorf,2013 Realtime Web Apps: With HTML5 WebSocket, PHP, and jQuery is a guide for intermediate- to advanced-level web developers looking to take the next leap forward in website and app development: realtime. With Realtime Web Apps , you'll be able to quickly get up to speed on what HTML5 WebSocket does, how it is going to affect the future of the web as we know it, and-thanks to Pusher's simple API-start developing your first realtime app today. The Web Application Hacker's Handbook Dafydd Stuttard,Marcus Pinto,2011-03-16 This book is a practical guide to discovering and exploiting security flaws in web applications. The authors explain each category of vulnerability using real-world examples, screen shots and code extracts. The book is extremely practical in focus, and describes in detail the steps involved in detecting and exploiting each kind of security weakness found within a variety of applications such as online banking, e-commerce and other web applications. The topics covered include bypassing login mechanisms, injecting code, exploiting logic flaws and compromising other users. Because every web application is different, attacking them entails bringing to bear various general principles, techniques and experience in an imaginative way. The most successful hackers go beyond this, and find ways to automate their bespoke attacks. This handbook describes a proven methodology that combines the virtues of human intelligence and computerized brute force, often with devastating results. The authors are professional penetration testers who have been involved in web application security for nearly a decade. They have presented training courses at the Black Hat security conferences throughout the world. Under the alias PortSwigger, Dafydd developed the popular Burp Suite of web application hack tools.

Business Information Systems Witold Abramowicz,2009-04-28 Contains the refereed proceedings of the 12th International Conference on Business Information Systems, BIS 2009, held in Poznan, Poland, in April 2009. This book includes sections on ontologies in organizations, ontologies and security, Web search, process modeling, process analysis and mining, and service-oriented architecture.

Computers Are Your Future 2006 Bill Daley,William Daley,Marion Wood,2005-03 Now available in two versions rather than three, this introduction to computers book is one that users will engage with -- maintaining the encyclopedic approach in the popular magazine style. It is refreshing, accurate, and easy to learn from-written to today's reader. The Eighth Edition moves the emphasis to connectivity and includes loads of new research to ensure that the statistics in the book are current. This edition emphasizes emerging technologies while de-emphasizing older technologies. The Complete version is chapters 10-14 of the Introductory version (with one Spotlight at the end on Emerging Technologies). Covers Careers and Certification, Programming, Databases and Information Systems, Systems Analysis and Design, and Enterprise Computing. For anyone wanting a basic knowledge of computers to apply to their jobs or lives.

Analytical and Stochastic Modeling Techniques and Applications Khalid Al-Begain,Dieter Fiems,William Knottenbelt,2010-06-17 This book constitutes the refereed proceedings of the 17th International Conference on Analytical and Stochastic Modeling Techniques and Applications, ASMTA 2010, held in Cardiff, UK, in June 2010. The 28 revised full papers presented were carefully reviewed and selected from numerous submissions for inclusion in the book. The papers are organized in topical sections on queueing theory, specification languages and tools, telecommunication systems, estimation, prediction, and stochastic modelling.

Advances in Computing Systems and Applications Oualid Demigha,Badis Djamaa,Abdenour Amamra,2018-08-09 This book gathers selected papers presented at the 3rd Conference on Computing Systems and Applications (CSA'2018), held at the Ecole Militaire Polytechnique, Algiers, Algeria on April 24–25, 2018. The CSA'2018 constitutes a leading forum for exchanging, discussing and leveraging modern computer systems technology in such varied fields as: data science, computer networks and security, information systems and software engineering, and computer vision. The contributions presented here will help promote and advance the adoption of computer science technologies in industrial, entertainment, social, and everyday applications. Though primarily intended for students, researchers, engineers and practitioners working in the field, it will also benefit a wider audience interested in the latest developments in the computer sciences.

Advances in Internet, Data and Web Technologies Leonard Barolli,Yoshihiro Okada,Flora Amato,2020-01-30 This book presents original contributions on the theories and practices of emerging Internet, data and web technologies and their applicability in businesses, engineering and academia. The Internet has become the most proliferative platform for emerging large-scale computing paradigms. Among them, data and web technologies are two most prominent paradigms, and manifest in a variety of forms such as data centers, cloud computing, mobile cloud, mobile web services and so on. Together, these technologies form a digital ecosystem based on the data cycle, from capturing to processing, analysis and visualization. The investigation of various research and development issues in this digital ecosystem is made all the more important by the ever-increasing needs of real-life applications, which involve storing and processing large amounts of data. As a key feature, the book addresses advances in the life-cycle exploitation of data generated from the digital ecosystem, and data technologies that create value for businesses, moving toward a collective intelligence approach. Given its scope, the book offers a valuable reference guide for researchers, software developers, practitioners and students interested in the field of data and web technologies.

Hydrogen for Future Thermal Engines Efstathios-Al. Tingas,2023-07-14 This book explores the potential of hydrogen combustion in thermal engines and serves as a foundation for future research. Hydrogen, a well-established energy carrier, has been used in internal combustion engines for centuries, but despite progress and industry interest, hydrogen engines have yet to reach mass production. In light of recent efforts to combat climate change with clean energy and environmentally-friendly technologies, the use of hydrogen in thermal engines is gaining momentum. This book examines the unique challenges of hydrogen combustion due to its wide

flammability limits, high auto-ignition temperature, and high diffusivity. It reviews current knowledge on the fundamental and practical aspects of hydrogen combustion and considers current developments and potential future advancement.

Software Quality. Software and Systems Quality in Distributed and Mobile Environments Dietmar Winkler,Stefan Biffl,Johannes Bergsmann,2015-01-05 This book constitutes the refereed proceedings of the scientific track of the 7th Software Quality Days Conference, SWQD 2015, held in Vienna, Austria, in January 2015. The SWQD conference offers a range of comprehensive and valuable information by presenting new ideas from the latest research papers, keynote speeches by renowned academics and industry leaders, professional lectures, exhibits, and tutorials. The four scientific full papers accepted for SWQD were each peer reviewed by three or more reviewers and selected out of 13 high-quality submissions. Further, four short papers were also presented and are included in this book. The papers are organized into topical sections on risk management and inspection, change impact analysis and systems testing, and software and systems architectures.

WTF? Tim O'Reilly,2017-10-10 WTF? can be an expression of amazement or an expression of dismay. In today's economy, we have far too much dismay along with our amazement, and technology bears some of the blame. In this combination of memoir, business strategy guide, and call to action, Tim O'Reilly, Silicon Valley's leading intellectual and the founder of O'Reilly Media, explores the upside and the potential downsides of today's WTF? technologies. What is the future when an increasing number of jobs can be performed by intelligent machines instead of people, or done only by people in partnership with those machines? What happens to our consumer based societies—to workers and to the companies that depend on their purchasing power? Is income inequality and unemployment an inevitable consequence of technological advancement, or are there paths to a better future? What will happen to business when technology-enabled networks and marketplaces are better at deploying talent than traditional companies? How should companies organize themselves to take advantage of these new tools? What's the future of education when on-demand learning outperforms traditional institutions? How can individuals continue to adapt and retrain? Will the fundamental social safety nets of the developed world survive the transition, and if not, what will replace them? O'Reilly is the man who can really can make a whole industry happen, according to Eric Schmidt, Executive Chairman of Alphabet (Google.) His genius over the past four decades has been to identify and to help shape our response to emerging technologies with world shaking potential—the World Wide Web, Open Source Software, Web 2.0, Open Government data, the Maker Movement, Big Data, and now AI. O'Reilly shares the techniques he's used at O'Reilly Media to make sense of and predict past innovation waves and applies those same techniques to provide a framework for thinking about how today's world-spanning platforms and networks, on-demand services, and artificial intelligence are changing the nature of business, education, government, financial markets, and the economy as a whole. He provides tools for understanding how all the parts of modern digital businesses work together to create marketplace advantage and customer value, and why ultimately, they cannot succeed unless their ecosystem succeeds along with them. The core of the book's call to action is an exhortation to businesses to DO MORE with technology rather than just using it to cut costs and enrich their shareholders. Robots are going to take our jobs, they say. O'Reilly replies, "Only if that's what we ask them to do! Technology is the solution to human problems, and we won't run out of work till we run out of problems. Entrepreneurs need to set their sights on how they can use big data, sensors, and AI to create amazing human experiences and the economy of the future, making us all richer in the same way the tools of the first industrial revolution did. Yes, technology can eliminate labor and make things cheaper, but at its best, we use it to do things that were previously unimaginable! What is our poverty of imagination? What are the entrepreneurial leaps that will allow us to use the technology of today to build a better future, not just a more efficient one? Whether technology brings the WTF? of wonder or the WTF? of dismay isn't inevitable. It's up to us!

Data portability and relation management in social web applications Sören Weber,2008-12-03 Inhaltsangabe:Introduction: Recent years have witnessed the great popularity of online social networking services, in which millions of members publicly articulate mutual friend- ship relations. Social network services have become a major application in the internet. Correspondingly the number of provider such social net- work services has multiplied and accommodates estimated 272 million users worldwide (Universalmccann, 2008). The mass adoption of social networking websites points to an evolution in human social interaction. These sites let the user create an identity namely their profile, which they fill with personal information. These identities can then be searched and relationships among the users can be made. A user can make friends virtually and by that creates his own social circle, that is why it can also be regarded as a reflection of the real world. Most of the users are part in more than one social network, which creates problems in terms of identity and relation management. At the moment there seems to be no consolidation among the services, but a further fragmentation and by that also a fragmentation of information. In the real world people can be easily identified, but this is not possible in the internet as there is no physical contact. People using assumed names as an identifier which may be different on every platform. On top of this it is difficult to manage all the contacts which are spread over several services. At the moment the social network services do not o er ways to get the data out of their platforms to reuse it somewhere else. The use of separate networks may be wanted by the users regarding order and different roles they can slip into. In spite of these aspects there is an increasing demand for reusing and sharing the contact data to be able to manage the online friendships . To overcome the disadvantages of fragmented data central storage has to be established. In combination with exchange mechanisms it would make data reusable, which means all the social networks the user is part of could be synchronised. This is especially useful when entering a new network. It is like moving into a new city and already know some people. Inevitable for such a scenario is that the information of the social networks are portable and that the user can be uniquely identified. There are e orts to achieve this goal, but up to now only partial problems have been solved. An overall concept seems not possible at the moment due to [...]
